Regional Policies and Comparative Advantage B'rje Johansson, Charlie Karlsson, Roger Stough, 2002-01-01 This title analyzes the conception of economic development in modern regions which has gone through a fundamental change since the early 1980s Regions are today increasingly looked upon as independent market places that are connected via interregional and international trade and not as administrative units embodied in a national state Two complementary theoretical frameworks explain the specialization of economic activity at the regional level The traditional approach assumes that the comparative advantages of regions depend upon differences in the supply of lasting resources In contrast the newer complementary framework called the new economic geography assumes that the dynamic interaction between geographical market potentials and rational firms in its own way creates the

comparative advantage of regions The book examines the policy implications of the complementarity of the competing views in a variety of geographic and functional contexts
