Regional Science Techniques In Practice The Case Of Nova Scotia:

Regional Science Techniques in Practice Stanislaw Czamanski,1972 Exploratory and explanatory statistical analysis of spatial data C.P.A. Bartels,R.H. Ketellapper,2012-12-06 In September 1977 a Regional Science Symposium was held at the Faculty of Economics of the University of Goningen in the Netherlands The impetus in organizing this symposium was the recent establishment at the Faculty of Economics of a group engaged in teaching and research within the field of regional science The aim of the symposium was to familiarize university members with regional science and to introduce the new group to both the national and international scene Two separate topics of potential interest to both researchers and policy makers were selected The first theme spatial inequalities and regional development was chosen because of its central place in regional science Authors from several disciplines were asked to approach this theme from a general policy oriented point of view This ensured the spotlighting of the various dimensions of spatial inequality and its implications for regional policy The results of their efforts have been collected in a volume entitled Spatial Inequalities and Regional Development The second theme focussed on spatial statistical analysis This branch of statistics is a relatively new one It is receiving growing attention from researchers in the field of applied regional science The conference dealing with this topic concentrated on recent research results related to the use of appropriate statistical and econometric methods for analyzing spatial data The papers concerned have been collected in another volume entitled Exploratory and Explanatory Statistical Analysis of Spatial Data **Handbook on Entropy, Complexity and Spatial Dynamics** Reggiani, Aura,Schintler, Laurie A.,Czamanski, Danny,Patuelli, Roberto,2021-12-14 This ground breaking Handbook presents a state of the art exploration of entropy complexity and spatial dynamics from fundamental theoretical empirical and methodological perspectives It considers how foundational theories can contribute to new advances including novel modeling and empirical insights at different sectoral spatial and temporal scales Multi-Criteria Analysis and Regional Decision-Making Peter Nijkamp,A.van Delft,1977-07-01

C. Whitby,K. G. Willis,2017-09-05 Originally published in 1978 The question of how best to use our various resources has become one of crucial importance as we face today's many economic problems In this second edition the authors are concerned with decisions on rural issues in a climate of financial cut backs which emphasise the need for identifying the most efficient public choices With a refreshing directness they consider immediate problems of rural resources such as the growth of the public sector fluctuating commodity prices dislocation in the land market pollution recreation pressure and modernisation of an outdated settlement structure In Part one chapters deal in turn with the economics of public decisions the application of quantitative models in the development context the planning system

as it applies to rural areas and the problems of conserving the rural environment Part two deals with the individual topics land use and conversion to other uses recreational use of the countryside conservation economics rural population the labour market and farm policies rural transport and rural settlement The authors conclude with an examination of the Cow Green Reservoir as a case study of a rural public issue which had to be resolved This revised and considerably expanded edition focusses specifically on the economic aspects of the subject and provides further illustrations diagrams and examples
