Regional Tectonic Synthesis Of Northwest:

Regional Tectonic Synthesis of Northwestern New England and Adjacent Quebec Wallace Martin Cady, 1969

Sumatra A. J. Barber, Michael J. Crow, John Milsom, 2005 This volume provides the first comprehensive account of the geology of Sumatra since the masterly synthesis of van Bemmelen 1949 Following the establishment of the Geological Survey of Indonesia after WW II the whole island has been mapped geologically at the reconnaissance level with the collaboration of the geological surveys of the United States and the United Kingdom The mapping programme completed in the mid 1990s together with supplementary data obtained by academic institutions and petroleum and mineral exploration companies has resulted in a vast increase in geological information which is summarized in this volume The synthesis of structural controls on sedimentation and magmatism during the tectonic evolution of Sumatra since the late Palaeozoic has provided a background for the formation of economic deposits of metallic minerals coal oil and gas The volume provides a sound basis for future geological research and for the exploration of the energy and mineral resources of the island

The Circum-Gulf of Mexico and the Caribbean Claudio Bartolini, Richard T. Buffler, Jon Frederic Blickwede, 2003 AAPG Memoir 79 The Circum Gulf of Mexico and the Caribbean is the first volume in more than a decade to document such a wide range of research on the geology of this vast area Of the total 44 papers roughly two thirds pertain to the Gulf of Mexico with an emphasis on the Mexican portion of the basin and to the petroliferous areas of the southern Caribbean including Colombia Venezuela Cuba and Trinidad and Tobago The remaining papers relate to the Antilles and Central America as well as a series of papers that address region wide topics such as plate tectonic evolution A significant number of papers were contributed by authors from national oil companies and universities from within the region AAPG

Dynamics of Arc Migration and Amalgamation Yasuto Itoh, 2017-05-31 This book is devoted to the dynamics of arc migration and amalgamation on active plate margins and we focus on the architectural examples from the NW Pacific margin Multidisciplinary approach pursuing the complicated tectonic processes is based on stratigraphy sedimentology geochemistry and geophysics The first chapter is dedicated to the genetic analysis of sedimentary basins in and around arc trench systems The following block of chapters deals with the petrological geochemical and rock magnetic properties of arc constituents which inform us of the migration history of crustal blocks on oceanic plates and spatiotemporal fluctuation in modes of subduction and stress regimes upon the Eurasian convergent margins Our vision is finally presented as a reconstruction model of plate motion around the study area since the Cretaceous 100 Ma Diverse contents of this book surely provide the audience with the present accomplishments of tectonic researches for active margins by Earth scientists

Tectonics Evgenii Sharkov, 2018-05-16 This book is devoted to different aspects of tectonic researches New results and interpretations are presented here for diverse tectonic settings Most of the chapters include up to date materials of detailed geological investigations often combined with geophysical data which can help understand more clearly the essence of mechanisms of different tectonic processes Some chapters are devoted to the tectonic evolution of regions East Antarctica East Kazakhstan Mongolo Okhotsk orogenic belt and others have dealt with the different aspects of tectonic events influence of detachment structural deformation on pore structure evolution in shales evolution of drainage in response to brittle ductile dynamics and surface processes soft sediment deformation structures triggered by the modern earthquakes and post opening deformation history of the Japan Sea back arc basin

Mechanism of Sedimentary Basin Formation Yasuto Itoh, 2013-08-28 This book is devoted to the mechanisms of sedimentary basin formation on active plate margins which show enormous diversity reflecting complex tectonic processes Multidisciplinary approach pursuing basin forming mechanism is based on geology sedimentology geochronology and geophysics Some chapters are dedicated to the genetic analysis of sedimentary basins in wrench deformation zones in forearc and intra arc regions Another block of chapters deals with basin formation in peripheral regions of Eurasia and intra arc foreland basins under the influence of the fluctuation of stress regimes Finally geophysical approaches to basin analyses are shown in some chapters from microscopic to regional scales Diverse contents of the chapters provide the audience with the present accomplishments of basin researches on active margins by Earth scientists

Freymueller,2024-12-11 Tectonics and Seismic Structure of Alaska and Northwestern Canada EarthScope and Beyond The northwest of the North American continent is geologically dynamic and tectonically active A network of seismic and geodetic instruments deployed across the region as part of the EarthScope project provided data crucial to understanding its geological tectonic and seismic processes Tectonics and Seismic Structure of Alaska and Northwestern Canada EarthScope and Beyond presents review papers and new scientific studies using EarthScope data to advance understanding of the region s structure seismic activity and geodynamic processes About this volume Describes the infrastructure and capabilities of the EarthScope seismic and geodetic networks Draws from a comprehensive set of geophysical data Includes field studies laboratory analyses and numerical modeling Spans processes from the Earth s interior and the lower mantle to the crust and surface Covers examples from subduction zones fault systems and some of the largest recorded earthquakes Provides scientific explanations for the natural landscapes and ongoing

movements shaping the northwest of the North American continent The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity Its publications disseminate scientific knowledge and provide resources for researchers students and professionals

Postcollisional Tectonics and Magmatism in the Mediterranean Region and Asia Yildirim Dilek, Spyros Pavlides, 2006-01-01 The Mediterranean region and Asia provide a natural laboratory to investigate the driving forces of continental tectonics in an ongoing collisional orogen and the crustal and mantle response to various modes of deformation associated with plate boundary processes The multidisciplinary research efforts in this region over the last fifteen years have produced a wealth of new data to better understand the interplay and feedback mechanisms between crustal and mantle processes and the dynamic landscape evolution in a complexly deforming area A number of discrete collisional events between the Gondwana derived continental fragments i e Adria Pelagonia Arabia India and Eurasia controlled the geodynamics of the Mediterranean region and Asia during the late Mesozoic and Cenozoic This book is a collection of research papers presenting new data interpretations and syntheses on various aspects of the collision induced tectonic magmatic metamorphic and geomorphic processes that have affected the evolution of this orogenic belt It should help us better understand the mode and nature of tectonic and magmatic processes and crustal evolution in active collision zones and the distribution and causes of seismic and volcanic events and their impact on landscape evolution Publisher s website
