Regional Cooperation For Water Quality Improvement In Southwestern Pennsylvania:

Regional Cooperation for Water Quality Improvement in Southwestern Pennsylvania National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Water Quality Improvement for the Pittsburgh Region, 2005-04-04 The city of Pittsburgh and surrounding area of southwestern Pennsylvania face complex water quality problems due in large part to aging wastewater infrastructures that cannot handle sewer overflows and stormwater runoff especially during wet weather Other problems such as acid mine drainage are a legacy of the region's past coal mining heavy industry and manufacturing economy Currently water planning and management in southwestern Pennsylvania is highly fragmented federal and state governments 11 counties hundreds of municipalities and other entities all play roles but with little coordination or cooperation The report finds that a comprehensive watershed based approach is needed to effectively meet water quality standards throughout the region in the most cost effective manner The report outlines both technical and institutional alternatives to consider in the development and implementation of such an approach *Flight 93 National Memorial, General Management Plan*, 2007

The Evolution of Water Resource Planning and Decision Making

Clifford S. Russell, Duane D. Baumann, 2009 This broad review of the development of US water resource policy analysis and practice offers perspectives from several disciplines law economics engineering ecology and political science While the historical context provided goes back to the early 19th century the book concentrates on the past 60 years and features a discussion of the difficulty that has generally been encountered in bringing the disciplines of economics and ecology into collaboration in the water resource context The book explores the evolution of water related analytical capabilities and institutions and provides illustrations from case studies concluding with recommendations for research institutional change and action Though designed to be a background textbook for interdisciplinary graduate seminars in water resources planning and management it is accessible to interested lay readers and those who have policymaking or implementation responsibility but lack a technical background The book will appeal to students and faculty in water policy economics and engineering and in interdisciplinary programs organized around water resource problems and questions Policy makers and general readers will also appreciate this non technical introduction **Water and the Cities** Peter Raven-Hansen, Abt Associates, 1969

Urban Stormwater Management in the United States National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Reducing Stormwater Discharge Contributions to Water Pollution,2009-03-17 The rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events putting higher volumes of water and more pollutants into the nation s rivers lakes and estuaries These changes have degraded water quality and habitat in virtually every urban stream system The Clean Water Act regulatory framework for addressing sewage and industrial wastes is not well suited to the more difficult problem of stormwater discharges This book calls for an entirely new permitting structure that would put authority and accountability for stormwater discharges at the municipal level A number of additional actions such as conserving natural areas reducing hard surface cover e g roads and parking lots and retrofitting urban areas with features that hold and treat stormwater are recommended **Journal of Green Building** ,2007 **Summary Appraisals of the Nation's Ground-water Resources--Great Lakes Region** William Godfrey Weist,1978 Additional title page description The role of ground water in the region s water related problems *Hydrology, Ecology, and Fishes of the Klamath River Basin* National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Board on Environmental Studies and Toxicology,Committee on Hydrology, Ecology, and Fishes of the Klamath River,2008-03-11 The Klamath River basin which spans parts of southern Oregon and northern California has been the focus of a prominent conflict over competing uses for

water Management actions to protect threatened and endangered fish species in the basin have left less water available for irrigation in dry years and heightened tensions among farmers and other stakeholders including commercial fishermen Native Americans conservationists hunters anglers and hydropower producers This National Research Council book assesses two recent studies that evaluate various aspects of flows in the Klamath basin 1 the Instream Flow Phase II study IFS conducted by Utah State University and 2 the Natural Flow of the Upper Klamath Basin study NFS conducted by the U S Bureau of Reclamation USBR The book concludes that both studies offer important new information but do not provide enough information for detailed management of flows in the Klamath River and it offers many suggestions for improving the studies The report recommends that a comprehensive analysis of the many individual studies of the Klamath river basin be conducted so that a big picture perspective of the entire basin and research and management needs can emerge **Catalog of Federal Domestic Assistance** ,2011 Identifies and describes specific government assistance opportunities such as loans grants counseling and procurement contracts available under many agencies and programs American Book Publishing Record ,2005 **Selected Water Resources Abstracts** ,1991 Aging Infrastructure Kyna Powers,Resources, Science, and Industry Division,2006 To help inform discussions on the federal role in dam safety this report provides background information on the nation s dam safety activities and funding mechanisms
