## **Regions Around The World:**

*Regions Around the World* Phillip Bacon, 1970      WORLD REGIONAL GEOGRAPHY. (PRODUCT ID 23958336). CAITLIN. FINLAYSON, 2019      *The Multidimensionality of Regions in World Politics* Paul J. Kohlenberg, Nadine Godehardt, 2020-09-02

This book examines what counts regarding the role and conceptualization of regions in world politics. It presents a fresh look at which narratives awake, persist, fall dormant or re-emerge amidst diverse interlocking processes of environmental, technological and global political changes. It puts forward a thorough and multidimensional conceptualization of regions as embedded in changing overlapping environments and requires more attention to regions shifting materiality, temporality and technological underpinnings. Combining the approaches, questions and analyses of Critical IR and Political Geography, it calls for a renewed emphasis on the puzzle of how the contextual environment of regions may become more or less multidimensional or how some aspects of a region's contextual environment may be mutually constitutive in non-intuitive ways. Ultimately, it sheds light on the politics of regions and the regional scale in international politics in order to overcome the often underlying territorial fixity of territory and space within IR approaches. This book will be of key interest to scholars and students of international relations, international political sociology, political geography, regionalism, geopolitics and area studies.

**Geography of the World's Major Regions** John Cole, 2003-09-02. Presents a global view of today's most pressing issues through an analysis of the twelve major regions of the world. Economic and political restructuring, agriculture, industry, catastrophe, human conflict are just some of the issues covered.

**Global Change and Mountain Regions** Uli M. Huber, Harald K.M. Bugmann, Mel A. Reasoner, 2006-03-09. This book gives an overview of the state of research in fields pertaining to the detection, understanding and prediction of global change impacts in mountain regions. More than sixty contributions from paleoclimatology, cryospheric research, hydrology, ecology and development studies are compiled in this volume, each with an outlook on future research directions. The book will interest meteorologists, geologists, botanists and climatologists.

**Regions and Nations of the World** Earl Emmet Lackey, Esther Sanfreida Anderson, 1946

**The Global Competitiveness of Regions** Robert Huggins, Hiro Izushi, Daniel Prokop, Piers Thompson, 2014-06-27. The aim of this book is to consider theoretically the notion of the global competitiveness of regions as well as giving attention as to how such competitiveness may be empirically measured. With this in mind, the book has three specific objectives: first, to place the concept of regional competitiveness within the context of regional economic development theory; second, to present a rationale and method for quantifying the global competitiveness of regions; and third, to undertake the most geographically widespread analysis of regional competitiveness differences across the globe. With regard to the third goal, the analysis incorporates more than 500 regions across Europe, North and South America, Asia, Pacific, the Middle East and the so-called BRIC economies of Brazil, Russia, India and China. The importance of the concept of competitiveness has increased rapidly in recent years, with the issues surrounding it becoming at the same time more empirically refined and theoretically complex.

The focus on regions reflects the growing consensus that they are the primary spatial units that compete to attract investment and it is at the regional level that knowledge is circulated and transferred resulting in agglomerations or clusters of industrial and service sector enterprises. This growing acknowledgement of the region's role as a key spatial unit of organisation has led to attention turning to competitiveness at a more regional level. The book explores the results of the World Competitiveness Index of Regions (WCIR) covering the rankings and results of the 2014 edition. The WCIR provides a tool for analysing the development of a range of regional economies across the globe. It enables an illustration of the changing patterns of regional competitiveness on the international stage to be generated. In fundamental terms the WCIR aims to produce an integrated and overall benchmark of the knowledge capacity capability and sustainability of each region and the extent to which this knowledge is translated into economic value and transferred into the wealth of the citizens of each region.

Global City-Regions Allen J. Scott, 2001-01-25. There are now more than three hundred city regions around the world with populations greater than one million. These city regions are expanding vigorously and they present many new and deep challenges to researchers and policy makers in both the more developed and less developed parts of the world. The processes of global economic integration and accelerated urban growth make traditional planning and policy strategies in these regions increasingly inadequate while more effective approaches remain largely in various stages of hypothesis and experimentation. *Global City Regions* represents a multifaceted effort to deal with the many different issues raised by these developments. It seeks at once to define the question of global city regions and to describe the internal and external dynamics that shape them. It proposes a theorization of global city regions based on their economic and political responses to intensifying levels of globalization and it offers a number of policy insights into the severe social problems that confront global city regions as they come face to face with an economically and politically neoliberal world. At a moment when globalization is increasingly subject to critical scrutiny in many different quarters, this book provides a timely overview of its effects on urban and regional development, one of its most important but perhaps least understood corollaries. The book also offers a series of nuanced visions of alternative possible futures.

**A World of Regions** Peter J. Katzenstein, 2015-11-16. Observing the dramatic shift in world politics since the end of the Cold War, Peter J. Katzenstein argues that regions have become critical to contemporary world politics. This view is in stark contrast to those who focus on the purportedly stubborn persistence of the nation state or the inevitable march of globalization. In detailed studies of technology and foreign investment, domestic and international security and cultural diplomacy and popular culture, Katzenstein examines the changing regional dynamics of Europe and Asia which are linked to the United States through Germany and Japan. Regions, Katzenstein contends, are interacting closely with an American imperium that combines territorial and non-territorial powers. Katzenstein argues that globalization and internationalization create open or porous regions. Regions may provide solutions to the contradictions between states and markets, security and insecurity, nationalism and cosmopolitanism. Embedded in the

American imperium regions are now central to world politics      **World Regions in Global Context** Sallie A. Marston, Paul L. Knox, Diana M. Liverman, Vincent Del Casino, Paul F. **Regions of War and Peace** Douglas Lemke, 2002-01-21 In this contribution to the literature on the causes of war Douglas Lemke asks whether the same factors affect minor powers as affect major ones He investigates whether power parity and dissatisfaction with the status quo have an impact within Africa the Far East the Middle East and South America Lemke argues that there are similarities across these regions and levels of power and that parity and dissatisfaction are correlates of war around the world The extent to which they increase the risk of war varies across regions however and the book looks at the possible sources of this cross regional variation concluding that differential progress toward development is the likely cause This book will interest students and scholars of international relations and peace studies as well as comparative politics and area studies

**Geography** H. J. de Blij, 1997-04-01 *Regional Worlds: Advancing the Geography of Regions* Martin Jones, Anssi Paasi, 2017-10-02 A key concern in the debate and empirical research on the geography of regions is the evolution of the conceptualizations and practical uses of the idea of region This idea prioritises both the intellectual and the practical development of regional studies This book drives the discussion further It stresses the complex forms of agency advocacy involved in the production and reproduction of regional spaces and space of regionalism as well as the importance of geohistory and context The book moves beyond the territorial relational divide that has characterized debates on regions and regional borders since the 1990s The contributors answer key questions from different conceptual and concrete contextual angles and to motivate readers to reflect on the perpetual significance of regional concepts and how they are mobilized by various actors to maintain or transform the contested spatialities of societal power relations This book was based on a special issue of *Regional Studies*
