## **Regulation Of Sertoli Cell And Germ Cell Differentiation:**

**Sertoli Cell Biology** Michael D. Griswold, 2014-11-19 Sertoli Cell Biology Second Edition summarizes the progress since the last edition and emphasizes the new information available on Sertoli germ cell interactions This information is especially timely since the progress in the past few years has been exceptional and it relates to control of sperm production in vivo and in vitro Fully revised Written by experts in the field Summarizes 10 years of research Contains clear explanations and summaries Provides a summary of references over the last 10 years **The Sertoli Cell** Lonnie Dee Russell, Michael D. Griswold, 1993 **Infertility in the Male** Larry I. Lipshultz, Stuart S. Howards, Craig S. Niederberger, 2009-09-24 This extensively revised edition of the highly respected reference book provides in depth discussions on the latest developments in male reproductive medicine **Endocrinology of the Testis and Male Reproduction** Manuela Simoni, Ilpo T. Huhtaniemi, 2017-09-18 This book provides a comprehensive overview of endocrinology of the male reproductive system explaining how it works and how sometimes it fails to work World class specialists present state of the art knowledge on all aspects including anatomy physiology molecular biology genetics pathophysiology clinical manifestations of testicular diseases endocrine aspects of andrological and sexual diseases and therapy Extensive consideration is given to sexual development testicular function the clinical approach to disorders of male reproduction male hypogonadism sexual dysfunction and male infertility In addition sociodemographic psychological and ethical aspects of male reproductive disorders are discussed The book is intended as a major reference for endocrinologists andrologists and sexologists as well as basic and clinical scientists It is published as part of the SpringerReference program which delivers access to living editions constantly updated through a dynamic peer review publishing process **Regulation of Sertoli Cell and Germ Cell Differentiation** R. Brehm, Klaus Steger, 2005-12-12 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

**Molecular Mechanisms in Spermatogenesis** C. Yan Cheng, Fei Sun, 2021-08-28 This new edition provides an update on the molecular mechanisms that regulate spermatogenesis In addition to the rodent as a study model chapters also include

research on studies in humans It includes the latest approaches of studying spermatogenesis such as the use of bioinformatics molecular modeling and others which are not commonly found in published materials It also reviews the latest developments in the field such as studies on the role of regulatory RNAs on spermatogenesis Due to the declining fertility rate among men a brand new chapter highlights the impact of environmental toxicants on spermatogenesis

**Regulation of Sertoli Cell and Germ Cell Differentiation** R. Brehm, Klaus Steger, 2009-09-02 Unwanted childlessness affects approximately one in six couples worldwide though the exact proportion of the predominant cause of the problem remains controversial according to the World Health Organization WHO in nearly 40% of cases the cause can be attributed to the female in 20% to the male in 25% to both and in 15% the cause remains unknown Based on these figures the incidence of male factor infertility in the general population is approximately 7% The majority of these men approximately 30% experience irreversible idiopathic infertility and cannot father children without some form of medical intervention Male factor infertility in addition may be caused by testicular germ cell cancer which is known to represent the most common cancer among young men aged 15 to 35 years in Western industrialized countries The number of affected men has increased dramatically over the past 50 years There is now growing evidence that human testicular germ cell cancer originates from fetal germ cells exhibiting an aberrant programme of gene expression and tumour progression may be favoured by an aberrant Sertoli cell germ cell communication

Hormonal Regulation of Spermatogenesis Frank French, 2012-12-06 The conference represented by this book was made possible by support from NICHD and a planning committee headed by Dr Richard Sherins Two general areas of research are included the first encompasses steroid hormone synthesis metabolism and transport in the testis and the second relates to hormonal regulation of the seminiferous tubule with special emphasis on the control of Sertoli cell function In addition there are sections on the purification of unique testicular proteins and morphological studies with particular emphasis on the Sertoli cell We would like to express our sincere thanks to Dr Sherins and his staff at NICHD and to all of the people at the University of North Carolina who participated in the Conference arrangements to Dr Judson J Van Wyk Chief of the Pediatric Endocrinology Division and Dr H Stanley Bennett Director of the Laboratories for Reproductive Biology Our very special thanks to Mrs Carolyn Jaros for her help in handling the local arrangements Mrs Martha Byrd and Mrs Linda Rollins typed the manuscripts Miss Leslie Wells and Mr Albert Smith kindly assisted in proof reading and Dr Elizabeth Wilson gave much help with the final editing process To all of these people we are most grateful

**Biologic Markers in Reproductive Toxicology** National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Board on Environmental Studies and Toxicology, Committee on Biologic Markers, Subcommittee on Reproductive and Neurodevelopmental Toxicology, 1989-02-01 Does exposure to environmental toxicants inhibit our ability to have healthy children who develop normally Biologic markers indicators that can tell us when environmental factors have caused a change at the cellular or biochemical level that might affect reproductive ability are a

promising tool for research aimed at answering that important question *Biologic Markers in Reproductive Toxicology* examines the potential of these markers in environmental health studies clarifies definitions underlying concepts and possible applications and shows the benefits to be gained from their use in reproductive and neurodevelopmental research

*Molecular Signaling in Spermatogenesis and Male Infertility* Rajender Singh, 2019-11-06 Spermatogenesis involves the coordination of a number of signaling pathways which culminate into production of sperm Its failure results in male factor infertility which can be due to hormonal environmental genetic or other unknown factors This book includes chapters on most of the signaling pathways known to contribute to spermatogenesis Latest research in germ cell signaling like the role of small RNAs in spermatogenesis is also discussed This book aims to serve as a reference for both clinicians and researchers explaining possible causes of infertility and exploring various treatment methods for management through the basic understanding of the role of molecular signaling Key Features Discusses the signaling pathways that contribute to successful spermatogenesis Covers comprehensive information about Spermatogenesis at one place Explores the vital aspects of male fertility and infertility Explains the epigenetic regulation of germ cell development and fertility Highlights the translational opportunities in molecular signaling in testis

*Textbook of Clinical Embryology* Kevin Coward, Dagan Wells, 2013-10-31 The success of Assisted Reproductive Technology is critically dependent upon the use of well optimized protocols based upon sound scientific reasoning empirical observations and evidence of clinical efficacy Recently the treatment of infertility has experienced a revolution with the routine adoption of increasingly specialized molecular biological techniques and advanced methods for the manipulation of gametes and embryos This textbook inspired by the postgraduate degree program at the University of Oxford guides students through the multidisciplinary syllabus essential to ART laboratory practice from basic culture techniques and micromanipulation to laboratory management and quality assurance and from endocrinology to molecular biology and research methods Written for all levels of IVF practitioners reproductive biologists and technologists involved in human reproductive science it can be used as a reference manual for all IVF labs and as a textbook by undergraduates advanced students scientists and professionals involved in gamete embryo or stem cell biology

**Stem Cells in Reproductive Medicine** Carlos Simón, Antonio Pellicer, Renee Reijo Pera, 2013-07-04 Stem cell science has the potential to impact human reproductive medicine significantly cutting edge technologies allow the production and regeneration of viable gametes from human stem cells offering potential to preciously infertile patients Written by leading experts in the field *Stem Cells in Reproductive Medicine* brings together chapters on the genetics and epigenetics of both the male and female gametes as well as advice on the production and regeneration of gene cells in men and women trophoblasts and endometrium from human embryonic and adult stem cells Although focussing mainly on the practical elements of the use of stem cells in reproductive medicine the book also contains a section on new developments in stem cell research The book is essential reading for reproductive medicine clinicians gynecologists and embryologists who want to keep abreast of

practical developments in this rapidly developing field      Fertility Preservation in Male Cancer Patients John P. Mulhall, 2013-02-21 Written by international authorities this book is aimed at clinicians dealing with male patients rendered infertile by cancer therapy      Proteomics of Spermatogenesis G. S. Gupta, 2005-05-26 Recent developments of experimental techniques in cellular and molecular biology have made it possible to understand the molecular biology of male gametogenesis in greater detail This book focuses on the description of specialized proteins which are dominantly and or specifically expressed in germ cells and localized in spermatozoa There is an urgent need to classify proteins of spermatogenic cells with a view of their functions and their applications in the regulation of fertility and in understanding infertility The understanding of structural properties of male germ cell specific proteins can offer vulnerable points for targeted intervention in testis without generalized effects on stages of spermatogenesis Besides targeted action in male germ cells sperm specific proteins and polypeptides may also offer potential application in the development of a contraceptive vaccine Researchers in the fields of biochemistry cell biology molecular biology reproductive biology and proteomics will find this book of interest This book is far superior to any previous book on the subject I recommend this book with great enthusiasm Pawan K Singal St Boniface General Hospital Research Center      New Insights into Theriogenology , 2018-12-05 This book covers a variety of topics on animal reproduction and reproductive medicine With evolving technology and a continual increase in knowledge regarding domestic pets or agricultural animals new information is available on diverse topics in this broad field The book contents reflect the individual experience of authors who developed a number of themes identified as attracting interest in the field As it is new opportunities were opened for productive collaboration We have tried to provide you with current specialised information that may be useful to students clinicians and researchers We hope this book inspires you to embrace these themes foster the debate on particular topics and may be used as a start up source for exploring the theriogenology field      **Cellular and Molecular Regulation of Testicular Cells** Claude Desjardins, 2011-09-30 Conceptual advances in the biological sciences are marked by the application of new techniques and experimental strategies Nowhere has this generic principle been more apparent than in the study of testicular cells as judged by the evolution of themes presented at the Testis Workshop over the past 23 years Like its predecessors the 1995 Testis Workshop was structured to offer fresh insights and approaches for understanding the mechanisms of spermatogenesis and steroidogenesis The chapters presented in this book emphasize three aspects of testicular cell function first the molecular analysis of the cell cycle second examination of the cell cycle including the function and identification of specific macromolecules that direct the proliferation and differentiation of germ cells and third the development of Leydig cells and the role of specific macromolecules in the formation of testicular steroids Each chapter is based on a lecture presented at the XIIIth Testis Workshop held on March 30 to April 1 1995 at the Radisson Plaza Hotel in Raleigh North Carolina The selection of topics reflects the recommendations of the workshop S organizing committee Sincere thanks are

due to the speakers who agreed to lecture and prepare chapters

**Testosterone** Susan Nieschlag, Eberhard Nieschlag, Hermann M. Behre, 2012-12-06 New developments in testosterone therapy are summarized here by internationally renowned experts They review both basic and clinical knowledge in fourteen chapters The book begins with the biochemistry of testosterone its biosynthesis metabolism and mechanisms of action in target organs Three chapters deal with specific aspects of testosterone action namely its role in spermatogenesis its psychotropic effects and its effects on bones Syndromes caused by androgen resistance are described in order to highlight the importance of properly functioning enzymes and receptors in the target organs Causes and symptoms of male hypogonadism the major indication for testosterone treatment are described Five chapters are devoted to the pharmacology pharmacokinetics and clinical uses and abuses of testosterone preparations The new transdermal testosterone application is described in detail Side effects of testosterone treatment are reviewed The possible role of androgens in the development of prostatic hypertrophy and carcinoma is discussed extensively since this question is of major concern to the clinician
