internationally leading experts in the field They provide an updated view on how the cell cycle is regulated in vivo and about the involvement of cell cycle regulators in cancer      Advances in Post-Translational Modifications of Proteins and Aging V. Zappia, 2013-12-11 This volume contains 56 contributions presented at the 1st International Symposium on Post Translational Modifications of Proteins and Ageing held on the Island of Ischia Naples Italy from May 11 to 15 1987 under the auspices of the University of Naples and the Italian Society of Biochemistry The primary aim of this interdisciplinary meeting was to promote a productive exchange among scientists from different cultural areas and to give them the opportunity to discuss problems of common interest approached from different scientific standpoints Although a large number of studies has led to a definition of the chemical mechanisms and of the main enzymological aspects of the several post translational modifications of proteins we are still far away from a complete elucidation of the functional significance of such processes As a matter of fact it seems reasonable that the presently available experimental approaches and models employed to investigate the biological roles are still inadequate The search for suitable model systems was a matter of discussion during the meeting and will be a major challenge in the future The most frequently employed approaches to this problem thus far have been in vitro but several proteins reported to be excellent in vitro substrates failed to show any activity when assayed in in vivo models

**Molecular Biology of the Cell** ,2002      *Cell Cycle Control* Michele Pagano, 1998-06-08 Addressing the regulation of the eukaryotic cell cycle this book brings together experts to cover all aspects of the field clearly and unambiguously delineating what is commonly accepted in the field from the problems that remain unsolved It will thus appeal to a large audience basic and clinical scientists involved in the study of cell growth differentiation senescence apoptosis and cancer as well as graduates and postgraduates      **Concepts of Biology** Samantha Fowler, Rebecca Roush, James Wise, 2023-05-12 Black white print Concepts of Biology is designed for the typical introductory biology course for nonmajors covering standard scope and sequence requirements The text includes interesting applications and conveys the major themes of biology with content that is meaningful and easy to understand The book is designed to demonstrate biology concepts and to promote scientific literacy      Cell Cycle Control in Eukaryotes David H. Beach, David Beach, Claudio Basilico, John Newport, Cold Spring Harbor Laboratory, 1988      *Mitosis/Cytokinesis* Arthur Zimmerman, 2012-12-02 Mitosis Cytokinesis provides a comprehensive discussion of the various aspects of mitosis and cytokinesis as studied from different points of view by various authors The book summarizes work at different levels of organization including phenomenological molecular genetic and structural levels The book is divided into three sections that cover the premeiotic and premitotic events mitotic mechanisms and approaches to the study of mitosis and mechanisms of cytokinesis The authors used a uniform style in presenting the concepts by including an overview of the field a main theme and a conclusion so that a broad range of biologists could understand the concepts This volume also explores the potential developments in the study of mitosis and cytokinesis providing a background and perspective into research on mitosis and cytokinesis that will be invaluable to scientists and

**Untranslated Gene Regions and Other Non-coding Elements** Lucy W. Barrett, Sue Fletcher, Steve D. Wilton, 2013-06-26 There is now compelling evidence that the complexity of higher organisms correlates with the relative amount of non coding RNA rather than the number of protein coding genes Previously dismissed as junk DNA it is the non coding regions of the genome that are responsible for regulation facilitating complex temporal and spatial gene expression through the combinatorial effect of numerous mechanisms and interactions working together to fine tune gene expression The major regions involved in regulation of a particular gene are the 5 and 3 untranslated regions and introns In addition pervasive transcription of complex genomes produces a variety of non coding transcripts that interact with these regions and contribute to regulation This book discusses recent insights into the regulatory roles of the untranslated gene regions and non coding RNAs in the control of complex gene expression as well as the implications of this in terms of organism complexity and evolution

**Meiosis and Gametogenesis**, 1997-11-24 In spite of the fact that the process of meiosis is fundamental to inheritance surprisingly little is understood about how it actually occurs There has recently been a flurry of research activity in this area and this volume summarizes the advances coming from this work All authors are recognized and respected research scientists at the forefront of research in meiosis Of particular interest is the emphasis in this volume on meiosis in the context of gametogenesis in higher eukaryotic organisms backed up by chapters on meiotic mechanisms in other model organisms The focus is on modern molecular and cytological techniques and how these have elucidated fundamental mechanisms of meiosis Authors provide easy access to the literature for those who want to pursue topics in greater depth but reviews are comprehensive so that this book may become a standard reference Key Features Comprehensive reviews that taken together provide up to date coverage of a rapidly moving field Features new and

unpublished information Integrates research in diverse organisms to present an overview of common threads in mechanisms of meiosis Includes thoughtful consideration of areas for future investigation
