Regulation of Aldosterone Biosynthesis Jürg Müller, 2012-12-06 Sixteen years is a long time not only in human life but also in the rapid history of contemporary endocrinology. Since the publication of the first edition of this monograph numerous new lines of research and discoveries have greatly contributed to our knowledge of the physiological and pathological regulation of aldosterone biosynthesis in man and animals. The first reports about a sensitive radioimmunoassay for plasma aldosterone and about a preparation of dispersed zona glomerulosa cells were published in 1970. Mayes et al 1970 Haning et al 1970. These two developments alone turned out to have a tremendous impact on research in aldosterone physiology for reviews see Coghlan et al 1979b J F Tait et al 1980b. In 1971 atrial natriuretic peptides, somatostatin and the precursor molecule of ACTH had not yet been discovered. Angiotensin antagonists and converting enzyme inhibitors were not yet available. The clinical syndrome of hypo reninemic hypo aldosteronism was unknown. The possible roles of prostaglandins and dopamine in the control of aldosterone production had not been considered. Cyclic AMP was then the only substance with a clearly established second messenger function.

Endocrinology of Cardiovascular Function Ellis R. Levin, Jerry L. Nadler, 2012-12-06 Endocrinology of Cardiovascular Function is a fitting inauguration to the Endocrine Update Series. The aim of these publications is to provide the clinician with cutting edge yet succinct access to the latest advances in endocrinology. Historically our understanding of hormonal disturbances was restricted to the classical secretory glands and their targets. As Endocrinology of Cardiovascular Function so aptly indicates endocrinology is no longer constrained by our early physiologic understanding of glandular disorder. Endocrinology of Cardiovascular Function has set the standard of excellence for the future volumes in this series. Shlomo Melmed M D Series Editor Endocrine Update. Growth factors such as IGF 1 play important roles in cardiovascular cell hypertrophy and the response to acute vascular injury. From another perspective traditional endocrine hormones such as estrogen have been found to participate in preventing the development of atherosclerosis in women acting through novel mechanisms on target vascular cells. Other endocrine hormones such as PTHrP and adrenomedullin also modulate cardiovascular and renovascular dynamic states suggesting new roles for these peptides as vasodilators. This multi authored text is dedicated to highlighting emerging and important new information regarding the endocrinology of the cardiovascular system. Ellis R Levin M D

Regulation of Aldosterone Biosynthesis J Rg M Ller, 2012 Most of our knowledge of the physiological control of aldosterone secretion is based on animal experiments and clinical studies which were carried out in the 1950s and early 1960s by a large number of inspired ingenious and meticulous researchers. Their work has been excellently reviewed by among others MULLER 1963 BLAIR WEST et al 1963 LARAGH and KELLY 1964 GANONG et al 1966

MULROW 1966 DAVIS 1967 and GROSS 1967 According to the majority of these investigators aldosterone secretion is primarily regulated by the renin angiotensin system with plasma sodium and potassium levels and pituitary secretion of ACTH playing important secondary roles During the last six years this hypothesis has been generally accepted and has only occasionally been challenged The following is an attempt to take from the perspective of a relatively simple in vitro model a new look at the efferent axis of the apparently very complex control system maintaining adequate aldosterone production in the mammalian organism My views are based mainly on a series of experiments which I have performed in order to study more closely the interactions of adrenocortical tissue with substances capable of directly influencing aldosterone biosynthesis

Endocrine and Hormonal Toxicology Philip W. Harvey, Kevin C. Rush, Andrew Cockburn, 1999-06-18 Endocrine and Hormonal Toxicology Edited by Philip W Harvey Kevin C Rush and Andrew Cockburn AgrEvo UK Ltd Saffron Walden UK This is the first book to consider the integrated role of the classical endocrine system and hormones including those from tissues outside the classical endocrine system in toxicological responses Although focusing on the latest knowledge on endocrine glands as target organs and the mechanistic and molecular basis for toxicity in these organs Endocrine and Hormonal Toxicology has been written to cover toxicological responses at the whole body level mediated by endocrine or hormonal mechanisms This whole body multi organ approach significantly broadens the relevance of this volume to toxicologists Following an introductory section on the types of endocrine toxicity including primary secondary and indirect mechanisms the next section deals with endocrine organs as toxicological targets International contributions focus on the pituitary thyroid and parathyroids adrenals testes ovaries and the pancreas and comparative endocrine carcinogenesis A third section of the book develops the whole body approach in which chapters are devoted to hormonal mechanisms of toxicity to the immune nervous cardiovascular gastrointestinal and reproductive systems as well as to the liver kidney and skin The final section covers human and environmental health perspectives discussing endocrine disrupting chemicals hormonal mechanisms in breast cancer and current regulatory trends in endocrine and hormonal toxicology The comprehensive nature of Endocrine and Hormonal Toxicology makes it accessible to both specialist and general toxicologists and to those within the fields of endocrinology pharmacology and pathology

Adrenal in Toxicology Philip W. Harvey, 1996-03-28 The adrenal gland is vitally important to health and secretes hormones that control many bodily processes ranging from normal metabolism to the response to stressful circumstances The corticosteroid hormones are the basis for anti inflammatory medicines and are very widely prescribed Changes in the function of the adrenal gland either naturally through stress or disease or through the action of drugs and chemicals can have a major impact on the body This text focuses on adrenal toxicity examining how drugs and chemicals can directly and indirectly affect this gland Coverage includes classification of the types of adrenal and endocrine toxicity the

mechanistic and molecular basis of toxicity reasons why the adrenal is the most common target organ in the endocrine system drug toxicity specific to patients with adrenal disorders drug corticosteroid interactions adverse drug reactions and how the adrenal gland is vital in tolerance to toxic insult Current Catalog ,1988 First multi year cumulation covers six years 1965 70 Textbook of Nephro-Endocrinology Ajay K. Singh,Gordon H. Williams,2009-01-12 The Textbook of Nephro Endocrinology is the definitive translational reference in the field of nephro endocrinology investigating both the endocrine functions of the kidneys and how the kidney acts as a target for hormones from other organ systems It offers researchers and clinicians expert gold standard analyses of nephro endocrine research and translation into the treatment of diseases such as anemia chronic kidney disease CKD rickets osteoporosis and hypoparathyroidism Investigates both the endocrine functions of the kidneys and how the kidney acts as a target for hormones from other organ systems Presents a uniquely comprehensive and cross disciplinary look at all aspects of nephro endocrine disorders in one reference work Clear translational presentations by the top endocrinologists and nephrologists in each specific hormone or functional systems field

Books in Series ,1985 Vols for 1980 issued in three parts Series Authors and Titles Bowker's Medical Books in Print ,1975 The Adrenergic System in Cardiovascular Physiology and Pathophysiology, 2nd Edition Giuseppe Rengo,2016-12-18 Cardiovascular diseases pose an enormous clinical challenge remaining the most common cause of death in the world adrenoceptors play an important role on cardiac vascular and or endothelial function at a cellular level with relevant applications in several cardiovascular diseases such as heart failure and hypertension G protein coupled receptors GPCRs including adrenergic receptors constitute the most ubiquitous superfamily of plasma membrane receptors and represent the single most important type of therapeutic drug target Sympathetic nervous system hyperactivity which characterizes several cardiovascular diseases such as heart failure and hypertension as well as physiological ageing has been proved to exert in the long term detrimental effects in a wide range of cardiovascular diseases Acutely sympathetic hyperactivity represents the response to an insult to the myocardium aiming to compensate for decreased cardiac output This process involves the activation of beta adrenergic receptors by catecholamine with consequent heart rate and cardiac

contractility increase However long term exposure of the heart to elevated norepinephrine and epinephrine levels originating from sympathetic nerve endings and chromaffin cells of the adrenal gland results in further progressive deterioration in cardiac structure and function At the molecular level sustained sympathetic nervous system hyperactivity is responsible for several alterations including altered beta adrenergic receptor signaling and function down regulation desensitization Moreover the detrimental effects of catecholamine affect also the function of different cell types including but not limited to endothelial cells fibroblasts and smooth muscle cells Thus the success of beta blocker therapy is due at least in part to the protection of the heart and the vasculature from the noxious effects of augmented catecholamine levels The research topic aimed to support the progress towards understanding the role of sympathetic nervous system under physiological conditions and the contribution of its hyperactivity in the pathogenesis and progression of cardiovascular diseases *Basic Physiology for the Health Sciences* Ewald E.
