Richard A Rachubinski, 2015-03-05 The peroxisome is an organelle with essential roles in lipid metabolism maintenance of reactive oxygen species homeostasis and anaplerotic replenishment of tricarboxylic acid cycle intermediates destined for mitochondria Peroxisomes constitute a dynamic endomembrane system The homeostatic state of this system is upheld via two pathways for assembling and maintaining the diverse peroxisomal compartments constituting it the relative contribution of each pathway to preserving such system may vary in different organisms and under various physiological conditions One pathway begins with the targeting of certain peroxisomal membrane proteins to an endoplasmic reticulum template and their exit from the template via pre peroxisomal carriers these carriers mature into metabolically active peroxisomes containing the entire complement of membrane and matrix proteins Another pathway operates via growth and maturation of pre existing peroxisomal precursors that do not originate from the endoplasmic reticulum mature peroxisomes proliferate by undergoing fission Recent studies have uncovered new roles for the peroxisomal endomembrane system in orchestrating important developmental decisions and defining organismal longevity This Frontiers Special Topic Issue is focused on the advances in our understanding of how evolutionarily distant organisms coordinate the formation maturation proliferation maintenance inheritance and quality control of the peroxisomal endomembrane system and how peroxisomal endomembranes communicate with other cellular compartments to orchestrate complex biological processes and various developmental programs from inside the cell *Rab GTPases and Membrane Trafficking* Guangpu Li, Nava

Evolution of Membrane Signaling and Trafficking in Plants Markus Geisler, Angus S. Murphy, Heven Sze, 2013-06-12 Membrane proteins are essential determinants of many biological processes in plants They function in metabolic processes signal transduction transport of small molecules and polymers across endo and plasma membranes and intercompartmental trafficking of proteins lipids and cell wall components During these integrative processes dynamic interactions of membrane proteins with other membrane or soluble components are thought to provide a high degree of flexibility that usually characterizes higher plants This concept is supported by the recent release of a first partial Arabidopsis interactome by the Arabidopsis Interactome Mapping Consortium <http://www.sciencemag.org/content/333/6042/601.full.htm> The Arabidopsis interactome reveals a strong enrichment of a few network communities including those for transmembrane transport and vesicle trafficking Strikingly the large transmembrane transport community shares a high amount of proteins with the vesicle trafficking community suggesting a strong physical and functional overlap and interaction

The British National Bibliography Arthur James Wells, 2001

Endocytosis and Signaling Christophe Lamaze, Ian Prior, 2018-08-10 This book focuses on the context dependency of cell signaling by showing how the endosomal system helps to structure and regulate signaling pathways The location and concentration of signaling nodes regulate their activation cycles and engagement with distinct effector pathways Whilst many cell signaling pathways are initiated from the cell surface endocytosis provides an opportunity for modulating signaling networks output In this book first a series of reviews describe the endocytic and endosomal system and show how these subcellular platforms sort and regulate a wide range of signaling pathway components and phenotypic outputs The book then reviews the latest scientific insights into how endocytic trafficking and subcellular location modulate a set of major pathways that are essential to normal cellular function and organisms development

Endocytosis in Plants Jozef Šamaj, 2012-10-01 Endocytosis is a fundamental cellular process by means of which cells internalize extracellular and plasma membrane cargos for recycling or degradation It is important for the establishment and maintenance of cell polarity subcellular signaling and uptake of nutrients into specialized cells but also for plant cell interactions with pathogenic and symbiotic microbes Endocytosis starts by vesicle formation at the plasma membrane and progresses through early and late endosomal compartments In these endosomes cargo is sorted and it is either recycled back to the plasma membrane or degraded in the lytic vacuole This book presents an overview of our current knowledge of endocytosis in plants with a main focus on the key molecules undergoing and regulating endocytosis It also provides up to date methodological approaches as well as principles of protein structural lipid sugar and microbe internalization in plant cells The individual chapters describe clathrin mediated and fluid phase endocytosis as well as flotillin mediated endocytosis and internalization of microbes The book was written for a broad

spectrum of readers including students teachers and researchers *Ubiquitin Code: From Cell Biology to Translational Medicine* Lingqiang Zhang,Yu Rao,Cui Hua Liu,Daming Gao,Lixin Wan,2021-12-30 *Myosins* Lynne M.

Coluccio,2007-11-15 This highly authoritative volume highlights the remarkable superfamily of molecular motors called myosins which are involved in such diverse cellular functions as muscle contraction intracellular transport cell migration and cell division In a timely compilation of chapters written by leading research groups that have made key discoveries in the field the current understanding of the molecular mechanisms and biological functions of these intriguing proteins is explored

Annual Plant Reviews, Intracellular Signaling in Plants Zhenbiao Yang,2009-01-22 Annual Plant Reviews Volume 33 Intracellular Signaling in Plants An intriguing and important question in our understanding of plantdevelopmental programming and responses to the environment is whatkinds of strategies and mechanisms plant cells use for thetransmission and the integration of various developmental andenvironmental signals This book provides insight into thisfundamental question in plant biology Intracellular Signaling in Plants is an excellent new addition tothe increasingly well known and respected Annual Plant Reviews andoffers the reader Chapters prepared by an esteemed team of internationalauthors A consistent and well illustrated approach to the subjectmatter An invaluable resource for all researchers and professionals inplant biochemistry and biology This important volume also deals with major known signalingmechanisms and several representative intracellular signalingnetworks in plants integrating comprehensive reviews and insightsfrom leading experts in the field Libraries in all universities and research establishments wherebiological sciences are studied and taught should have copies ofthis essential work on their shelves Also Available from Wiley Blackwell Annual Plant Reviews Volume 32 Cell Cycle Control and Plant Development Edited by Dirk Inz Print 9781405150439 Online 9780470988923 DOI 10 1002 9780470988923 Annual Plant Reviews Volume 31 Plant Mitochondria Edited by David Logan Print 9781405149396 Online 9780470986592 DOI 10 1002 9780470986592 **Crosstalk and Integration of Membrane Trafficking Pathways** Roberto Weigert,2012-04-11 Membrane traffic is a broad field that studies the complex exchange of membranes that occurs inside the cell Protein lipids and other molecules traffic among intracellular organelles and are delivered to or transported from the cell surface by virtue of membranous carriers generally referred as transport intermediates These carriers have different shapes and sizes and their biogenesis modality of transport and delivery to the final destination are regulated by a multitude of very complex molecular machineries A concept that has clearly emerged in the last decade is that each membrane pathway does not represent a close system but is fully integrated with all the other trafficking pathways The aim of this book is to provide a general overview of the extent of this crosstalk *Ras Superfamily Small G Proteins: Biology and Mechanisms 2* Alfred Wittinghofer,2014-09-26 This second of two volumes discusses subfamily proteins which function in molecular and vesicular transport mechanisms inside the cell In this volume the focus lies on the Rab Ran and Arf subfamily members As in Volume 1 the book is written by international renowned scientists in the field of

small G proteins In elaborate reviews biochemistry structure function and G protein effector interactions are described Together with Volume 1 this book provides an comprehensive state of the art work on small G proteins GTPases It is written for Graduates and Professors in Biochemistry and Cell Biology interested in the mechanism and function of small G proteins but are extremely valuable for those who want to move into the field **The Plant Plasma Membrane** Angus S.

Murphy, Wendy Peer, Burkhard Schulz, 2010-11-11 In plant cells the plasma membrane is a highly elaborated structure that functions as the point of exchange with adjoining cells cell walls and the external environment Transactions at the plasma membrane include uptake of water and essential mineral nutrients gas exchange movement of metabolites transport and perception of signaling molecules and initial responses to external biota Selective transporters control the rates and direction of small molecule movement across the membrane barrier and manipulate the turgor that maintains plant form and drives plant cell expansion The plasma membrane provides an environment in which molecular and macromolecular interactions are enhanced by the clustering of proteins in oligimeric complexes for more efficient retention of biosynthetic intermediates and by the anchoring of protein complexes to promote regulatory interactions The coupling of signal perception at the membrane surface with intracellular second messengers also involves transduction across the plasma membrane Finally the generation and ordering of the external cell walls involves processes mediated at the plant cell surface by the plasma membrane This volume is divided into three sections The first section describes the basic mechanisms that regulate all plasma membrane functions The second describes plasma membrane transport activity The final section of the book describes signaling interactions at the plasma membrane These topics are given a unique treatment in this volume as the discussions are restricted to the plasma membrane itself as much as possible A more complete knowledge of the plasma membrane s structure and function is essential to current efforts to increase the sustainability of agricultural production of food fiber and fuel crops
