**Entrepreneurship, Human Capital, and Regional Development** Rui Baptista, João Leitão, 2015-01-14 This book makes original contributions to the literature on clusters human capital and regional development by focusing on the link between entrepreneurship and economic growth aiming for a better understanding of the dynamics of growth determined by the entrepreneur's action in the regional space The focus is therefore on critical reflection and rethinking the articulation between three levels of analysis of economic systems namely entrepreneurship human capital and regional development which have not so far been perfectly articulated in the literature of reference on endogenous growth Although there has been significant research so far into the success and failure of clusters the implications of these multiple research efforts fail to provide political decision makers and company managers with critical information about which mechanisms lie behind cluster success and also about how clusters survive and prosper The innovative approaches presented in this book on entrepreneurship human capital mobility and regional development have considerable potential to create new and original implications for decision makers and managers In terms of value added this book contributes to the literature by seeking answers to the following questions i Is the growth and success of clusters over time due to concentration and transmission of business competences through spin offs located in a given regional space ii Does increased density of job options outside the

workplace contribute to increased mobility of human capital between firms located within clusters and so improve coordination in the local labor market iii Do spin offs benefit from hiring workers from successful incumbents inasmuch as those workers are expected to perform better than other workers from different origins Integrating theoretical frameworks empirical research and regional case studies from Portugal Spain Norway and Turkey the editors and contributors demonstrate that the regional dynamics of industry growth are strongly influenced by the mobility of employees towards new firms

**The Coming of New Industrial State** Sergey Bodrunov, 2024-02-20 The book explores the effect of modern technological shifts on human society showing that technologies are undergoing accelerating qualitative changes that open up new opportunities for personal development and satisfaction of wants and simultaneously engender risks associated with growing opportunities of human interference with nature and technogenic stress on the environment Based on the study of cutting edge technologies and resulting socioeconomic shifts Bodrunov's analysis outlines the shape of the civilizational crisis we face It can only be overcome by founding a new industrial society of the second generation if we consider the new industrial state described by J K Galbraith as the first generation reliant on knowledge intensive material production and the gradual removal of humans from immediate material production *Papers in ITJEMAST 11(11) 2020* , International Transaction Journal of Engineering Management Applied Sciences Technologies publishes a wide spectrum of research and technical articles as well as reviews experiments experiences modelings simulations designs and innovations from engineering sciences life sciences and related disciplines as well as interdisciplinary cross disciplinary multidisciplinary subjects Original work is required Article submitted must not be under consideration of other publishers for publications
