Reinventing NASA United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Space,1993 *Reinventing NASA* David H. Moore,1994 Evaluates NASA s strategy for coping with the expectation of lower funding in the future Develops a set of illustrative alternatives that would reduce the scope of NASA s mission Charts and tables **Reinventing NASA** Roger Handberg,2003-12-30 From its beginnings NASA was convinced that its real mission was to create the opportunity for a much different and better society on Earth namely through human space flight Pursuit of such a goal has led the agency to persist in certain activities even when they conflict with the wishes of Congress and the President Recent changes in the international environment changes that began well before September 11 2001 have brought the military back into the field of human space flight a situation that holds certain hazards for NASA since the military is more powerful politically Dramatic changes could be in store changes that could severely damage NASA s capacity for continuing what it sees as its primary objective While most analyses see the agency as riddled with incompetence Handberg argues that NASA s troubles are a product of its internal values He begins with an historical overview of the major themes in NASA s history followed by chapters on specific areas of concentration such as the space station space transportation space science and internal reforms He also discusses the long term future of the agency and human space flight in general both domestically and internationally **Spinoff , Organizational Learning at NASA** Julianne G. Mahler,2009-03-27 Just after 9 00 a m on February 1 2003 the space shuttle Columbia broke apart and was lost over Texas This tragic event led as the Challenger accident had 17 years earlier to an intensive government investigation of the technological and organizational causes of the accident The investigation found chilling similarities between the two accidents leading the Columbia Accident Investigation Board to conclude that NASA failed to learn from its earlier tragedy Despite the frequency with which organizations are encouraged to adopt learning practices organizational learning especially in public organizations is not well understood and deserves to be studied in more detail This book fills that gap with a thorough examination of NASA s loss of the two shuttles After offering an account of the processes that constitute organizational learning Julianne G Mahler focuses on what NASA did to address problems revealed by Challenger and its uneven efforts to institutionalize its own findings She also suggests factors overlooked by both accident commissions and proposes broadly applicable hypotheses about learning in public organizations *Legislative Calendar* United States. Burrows,2010-09-29 It was all part of man's greatest adventure landing men on the Moon and sending a rover to Mars finally seeing the edge of the universe and the birth of stars and launching planetary explorers across the solar system to Neptune and beyond The ancient dream of breaking gravity's hold and taking to space became a reality only because of the intense cold war rivalry between the superpowers with towering geniuses like Wernher von Braun and Sergei Korolyov shelving dreams of space travel and instead developing rockets for ballistic missiles and space spectacles Now that Russian archives are open and thousands of formerly top secret U S documents are declassified an often startling new picture of the space age emerges the frantic effort by the Soviet Union to beat the United States to the Moon was doomed from the beginning by gross inefficiency and by infighting so treacherous that Winston Churchill likened it to dogs fighting under a carpet there was more than science behind the United States suggestion that satellites be launched during the International Geophysical Year and in one crucial respect Sputnik was a godsend to Washington the hundred odd German V 2s that provided the vital start to the U S missile and space programs legally belonged to the Soviet Union and were spirited to the United States in a derring do operation worthy of a spy thriller despite NASA's claim that it was a civilian agency it had an intimate relationship with the military at the outset and still does a distinction the Soviet Union never pretended to make constant efforts to portray astronauts and cosmonauts as Boy Scouts were often contradicted by reality the Apollo missions to the Moon may have been an unexcelled political triumph and feat of exploration but they also created a headache for the space agency that lingers to this day This New Ocean is based on 175 interviews with Russian and American scientists and engineers on archival documents including formerly top secret National Intelligence Estimates and spy satellite pictures and on nearly three decades of reporting The impressive result is this fascinating story the first comprehensive account of the space age Here are the strategists and war planners engineers and scientists politicians and industrialists astronauts and cosmonauts science fiction writers and journalists and plain ordinary unabashed dreamers who wanted to transcend gravity's shackles for the ultimate ride The story is written from the perspective of a witness who was present at the beginning and who has seen the conclusion of the first space age and the start of the second **Space Law** Francis Lyall,2016-12-05 The opening of space to exploration and use has had profound effects on society Remote sensing by satellite has improved meteorology land use and the monitoring of the environment Satellite television immediately informs us visually of events in formerly remote locations as well as providing many entertainment channels World telecommunication facilities have been revolutionised Global positioning has improved transport This book examines the varied elements of public law that lie behind and regulate the use of space It also makes suggestions for the development and improvement of the law particularly as private enterprise plays an increasing role in space Into the Extreme Valerie Olson,2018-05-22 The first book length in depth ethnography of U S human spaceflight What if outer space is not outside the human environment but rather defines it This is the unusual starting point of Valerie Olson's Into the Extreme revealing how outer space contributes to making what

counts as the scope and scale of today's natural and social environments. With unprecedented access to spaceflight worksites ranging from astronaut training programs to life science labs and architecture studios, Olson examines how U.S. experts work within the solar system as the container of life and as a vast site for new forms of technical and political environmental control. Olson's book shifts our attention from space's political geography to its political ecology, showing how scientists, physicians, and engineers across North America collaborate to build the conceptual and nuts and bolts systems that connect Earth to a specifically ecosystemic cosmos. This cosmos is being redefined as a competitive space for potential economic resources, social relations, and political strategies. Showing how contemporary U.S. environmental power is bound up with the production of national technical and scientific access to outer space, *Into the Extreme* brings important new insights to our understanding of modern environmental history and politics. At a time when the boundaries of global ecologies and economies extend far below and above Earth's surface, Olson's new analytic frameworks help us understand how varieties of outlying spaces are known, made, and organized as kinds of environments, whether terrestrial or beyond.

NASA Tech Briefs, 1992 *The New Frontiers of Space*, Stefania Paladini, 2019-08-06

There are few industries in today's world as dynamic and dramatically changing as the space sector, with new ventures and initiatives being announced on a daily basis. As well as emerging countries improving their launching and manufacturing capabilities, private actors are beginning to join public bodies in the space race and participating in what is frequently being referred to as the new space era. With fantastic opportunities arising for business and economics, this book provides a comprehensive overview of the space sector, exploring recent initiatives and the most important areas of investment in the industry, including emerging fields of activities such as asteroid mining and space tourism. It also addresses traditional and non-traditional security issues in the sector, together with discussing their legal implications. This interdisciplinary book provides insights for practitioners and researchers alike, particularly those involved in technology and innovation management, emerging markets, international relations, and security studies.

Space Enterprise, Phillip Harris, 2009-12-29

In Space Enterprise: Living and Working Offworld. Dr. Philip Harris provides the vision and rationale as to why humanity is leaving its cradle, Earth, to use space resources as well as pursuing lunar industrialization and establishing offworld settlements. As a management space psychologist, Dr. Harris presents a behavioral science perspective on space exploration and enterprise. In this, his 45th book, Phil has completely revised and updated the two previous editions of this classic, placing new emphasis on the need for more synergy and participation by the private sector. He not only provides a critical review of what is happening in the global space community but offers specific strategies for lunar economic development. The author analyzes the human factors in contemporary and future space developments, especially relative to the deployment of people aloft. This user-friendly volume offers numerous photographs, diagrams, exhibits, and case studies.

Chinese Space Policy Roger Handberg, Zhen Li, 2006-11-29 This volume explains the beginnings and expansion of China's space program analyzing how China is now able to hold such ambitions and how the interaction between technology, politics, and economics has influenced the Chinese space program. It opens by tracing out the earlier development of the space program and identifying the successes and problems that plagued this initial effort, later focusing upon its development over the past decade and into the future. As China is now able to reach into outer space with its machines and since 2003 with its humans, the authors examine how this move from a non-participant status to a state operating at the highest level of space activities has confirmed its potential place as the new economic and military superpower of the twenty-first century. They also demonstrate how recent successes mean that China is now confronted by an issue previously encountered by other space powers such as the United States and the former Soviet Union: what is the value of the space program given its high costs and likelihood of dramatic failure? **Chinese Space Policy** will be of great interest to students of space studies, Chinese politics, security studies, and international relations in general.

This Gifted Age John C. Gibbons, 1997-10-01 This welcome collection provides a glimpse of the power of a scientific training combined with a humane outlook in approaching major issues of public policy. Few people have spoken more wisely to the larger issues of science and technology in our national life.
