Relation Algebras By Games:

Relation Algebras by Games Robin Hirsch, Ian Hodkinson, 2002-08-15 In part 2 games are introduced and used to axiomatise various classes of algebras Part 3 discusses approximations to representability using bases relation algebra reducts and relativised representations Part 4 presents some constructions of relation algebras including Monk algebras and the rainbow construction and uses them to show that various classes of representable algebras are non finitely axiomatisable or even non elementary Part 5 shows that the representability problem for finite relation algebras is undecidable and then in contrast proves some finite base property results Part 6 contains a condensed summary of the book and a list of problems There are more than 400 exercises P The book is generally self contained on relation algebras and on games and introductory text is scattered throughout Some familiarity with elementary aspects of first order logic and set theory is assumed though many of the definitions are given

Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart s work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell s Collected Papers

Cylindric-like Algebras and Algebraic Logic Hajnal Andréka, Miklós Ferenczi, István Németi, 2014-01-27 Algebraic logic is a subject in the interface between logic algebra and geometry it has strong connections with category theory and combinatorics Tarski s quest for finding structure in logic leads to cylindric like algebras as studied in this book they are among the main players in Tarskian algebraic logic Cylindric algebra theory can be viewed in many ways as an algebraic form of definability theory as a study of higher dimensional relations as an enrichment of Boolean Algebra theory or as logic in geometric form cylindric in the name refers to geometric aspects Cylindric like algebras have a wide range of applications in e g natural language theory data base theory stochastics and even in relativity theory The present volume consisting of 18 survey papers intends to give an overview of the main achievements and new research directions in the past 30 years since the publication of the Henkin Monk Tarski monographs It is dedicated to the memory of Leon Henkin
