Relational Self Theoretical Convergences In Psychoanalysis And Social Psychology:

The Relational Self Rebecca C. Curtis, 1991-03-22 In recent years the traditional psychoanalytic view of the self as an autonomous entity has been shifting to a more relational perspective This evolution from a solely intrapsychic stance brings psychoanalysis closer to the viewpoint of social psychology formerly a highly divergent discipline Bridging these different literatures **THE RELATIONAL SELF** describes the extent and meaning of these convergences The book is divided into four sections The first two examine current perspectives from psychoanalytic self psychology and social psychology and the latter two present an integration of psychoanalytic and social personality approaches Part One reviews the psychoanalytic theories of character structure that focus upon identity maintenance self esteem regulation and resistance to change Also presented is an interactional view of the self that explores the intersubjective context of intrapsychic experience Part Two shifts from the largely unconscious intrapsychic self to the self as affected by situational variables Considered here are the relationship between self image and attitudes the social categories deemed by people as important to their identity and the effects of physical relocation upon self concept change Part Three presents a theory of the self with separate rational and experiential processing systems and also explores cultural influences on the self from a psychoanalytic vantage point Part Four considers psychotherapy self verification and self concept change including self defeating behavior and self consistency striving the avoidance of self awareness self evaluation maintenance and self with other representations Bringing together the work of leading theorists in social psychoanalytic and personality psychology on the interaction of self organization with the social and physical environment **THE RELATIONAL SELF** fosters a better understanding of both situational and dispositional variables and a deeper appreciation of the changing theoretical sense of a relational self as the ultimate stage of development

Relational Being Kenneth J. Gergen, 2009-07-30 This book builds on two current developments in psychology scholarship and practice The first centers on broad discontent with the individualist tradition in which the rational agent or autonomous self is considered the fundamental atom of social life Critique of individualism spring not only from psychologists working in the academy but also from communities of

therapy and counseling The second and related development from which this work builds is the search for alternatives to individualist understanding Thus therapists such as Steve Mitchell along with feminists at the Stone Center expand the psychoanalytic tradition to include a relational orientation to therapy The present volume will give voice to the critique of individualism but its major thrust is to develop and illustrate a far more radical and potentially exciting landscape of relational thought and practice that now exists Most existing attempts to build a relational foundation remain committed to a residual form of individualist psychology The present work carves out a space of understanding in which relational process stands prior to the very concept of the individual More broadly the book attempts to develop a thoroughgoing relational account of human activity In doing so Gergen reconstitutes the mind as a manifestation of relationships and bears out these ideas in a range of everyday professional practices including family therapy collaborative classrooms and organizational psychology

Berman, 2003-01-01 Cross Cultural Difference in Perspectives on the Self features the latest research in a dynamic area of inquiry and practice Considered in these pages are cross cultural differences in the idea of the person and in models of balancing obligations to the self family and community Revisiting and questioning the concepts of self and self worth the authors investigate the extent to which factors traditionally associated with psychological effectiveness intrinsic motivation assuming personal responsibility for one s actions and feeling in control unique hopeful and optimistic are culturally bound Hazel Markus and Shinobu Kitayama consider cultural differences in models of psychological agency Joan Miller critiques the meaning of the term agency analyzing the extent to which many popular theories in psychology rest on rather narrow Western models of behavior and effective functioning Steven Heine calls into question the presumed universality of some forms of cognitive processing Sheena Iyengar and Sanford DeVoe apply a cross cultural perspective to better understand intrinsic and extrinsic motivation and the value of choice Kuo shu Yang questions the universality of the pervasive and popular theory of self actualization formulated by Abraham Maslow and finally Ype Poortinga reexamines not only the cultural boundaries of theory but also the very meaning of the concept of culture itself **Self, Identity, and Social Movements** Sheldon Stryker, Timothy Joseph Owens, Robert W. insights from the more compelling developmental and feminist theories are woven together within a theoretical framework that emphasises temporality emergence and human agency The result is a liberating theory of women s psychological development as constantly emerging and changing in time rather than as static and fixed by their nature socio cultural context and personal history The Psychological Development of Girls and Women will be essential reading for students and researchers in the psychology of women developmental psychology and women s studies Stability and Change in Relationships Anita L.
