

This is not a volume compiled by dewy-eyed utopians espousing instant reformulations based upon superficial generalizations. The recognition that the scientific basis for much of modern health care is "weak to non-existent" is a resolutely political statement; and this volume combines the clinical evidence for such a claim with a discussion of how most efficiently to allocate health care resources. The public policy debate must address the "two solitudes" currently regulating medical care: the fiercely protected autonomy of physicians, whose responsibility to the patient is based upon expertise; and the financial influence of governments, whose responsibility to the taxpayer is based upon their capacity to monitor, regulate and coordinate health services effectively at a community-wide level. The policy issue is how to make physicians accountable "not only for the quality of care, but also for the efficiency with which resources are used to achieve that quality" (264).

A rich and provocative volume written with handsome clarity, this collection underscores the intellectual and political credibility of the "health promotion" approach increasingly popular with most provincial governments in Canada and elsewhere. But the same vagueness concerning the precise nature of health promotion which characterizes most recent provincial health reform documents is especially evident here. For, while the most beguiling evidence presented in this volume clearly implies that much ill health is manifestly due to the perverse psychological effects of socio-economic inequalities, the solutions discussed here merely involve some combination of new practice guidelines, outcome assessments and administrative coordination.

There are surely two very different perceptions of "health promotion" here that are used indiscriminately. If, as the studies cited above suggest, socio-economic status is a major determinant of health, then a radical reconstruction of the bases of power and privilege would seem to be rather more relevant than discussions of total quality management and utilization reviews. While the contributors to this anthology are far more realistic about which strategies are politically viable, the question remains to be asked regarding the extent to which focusing hard upon organizational and procedural inefficiencies will detract attention from the deeper causes of morbidity.

The most fascinating and vexing issues here are not simply questions of health policy, but rather political and moral conflicts between wider interests in society. Orthodox health policy may be the domain of public policy experts, but the broader "political epidemiology" presented here forces us to confront questions regarding the balance between personal and social responsibility, the import of social and cultural structures, the distribution of social resources, the promise of sophisticated information technology and the role of good health as a right of citizenship. This volume is as much a challenge for political theorists as it is a collection for policy analysts; and it would be a shame if it were only to circulate within the realm of public policy.
