A Three-Factor Model of Couples Therapy Robert Mendelsohn,2017-08-07 Couple psychotherapy extends the work of the psychotherapist to the patient s most significant committed adult relationship yet the therapy is

difficult both conceptually and technically One major reason for this difficulty is that in every couple's treatment there is a confusing array of psychological defenses as well as regressive and nonregressive couple object relations as distinct from the object relations that each individual member brings to the couple Further many of these processes are occurring outside consciousness and at the very same time This book is an attempt to clarify all the confusing issues by presenting a three factor model of couple psychotherapy within a psychodynamic framework This model has been found to be very effective with many different kinds of couples The book suggests that there are three powerful couple dynamics that shape every couple's treatment A the quality and quantity of the couple's projective identifications B the level of their couple object relations and C the presence or absence of the defense of omnipotent control These three variables are the most important factors in the therapy they determine the success or failure of every therapy with every couple These dynamics also determine quite a bit about how to conduct a couple therapy with regard to the therapist's level of activity tone the way of sorting the material in his or her head and even the kinds of interventions he/she chooses whether or not for example the therapist will use certain resistance techniques Understanding these three variables and how they interact is key to the success of the therapy

Gelso, 2011 The concept of the real or personal relationship between client and therapist has existed since the earliest days of psychotherapy In this engaging book Charles J Gelso argues the case for the relevance of the real relationship to successful therapeutic outcomes **Saving Psychotherapy** Benjamin E. Caldwell, 2015-09-22 It is a troubling time to be a therapist Despite decades of powerful evidence that psychotherapy works and tremendous advances in both policy and technology making therapy available to more of those who need it the number of people actually going to therapy is flat or even declining While training to be a therapist continues to get more expensive therapists salaries aren't even keeping up with inflation Saving Psychotherapy addresses some of the troubling realities behind these truths There is strong data to suggest The field avoids claiming meaningful values leaving clients uncertain about the kind of guidance and support if any they will receive The modern training process for therapists rewards wealth much more than merit Many therapists express an open hostility to science and knowledge even when it supports our work There is little accountability for therapists to ever prove that they know what they're doing Therapists are generally uninvolved in public debate freely giving up their roles as society's experts on mental health and positive change Psychotherapy deserves a brighter future than the one we're on track for And the first step toward getting that brighter future is for individual therapists at all career levels to take personal responsibility for it In this data driven unflinching and relentlessly optimistic look at the state of psychotherapy today you will learn simple steps any

therapist can take to make your practice more reputable and successful while improving the health and reputation of the entire field
