## **Relevance And Ethics In Geography:**

*Relevance and Ethics in Geography* Bruce Mitchell, Dianne Draper, 1982      **Geography and Ethics** James D. Proctor, David M. Smith, 2002-09-11 This book represents a landmark exploration of the common terrain of geography and ethics Drawing together specially commissioned contributions from distinguished geographers across the UK North America and Australasia the place of geography in ethics and of ethics in geography is examined through wide ranging thematic chapters Geography and Ethics is divided into four sections for discussion and exploration of ideas Ethics and Space Ethics and Place Ethics and Nature and Ethics and knowledge all of which point to the rich interplay between geography and moral philosophy or ethics      Research Ethics in Human Geography Sebastian Henn, Judith Miggelbrink, Kathrin Hörschelmann, 2021-10-25 This book explores common ethical issues faced by human geographers in their research It offers practical guidance for research planning and design that incorporates geographic disciplinary knowledge to conceptualise research ethics The volume brings together international insights from researchers in geography and related fields to provide a comprehensive overview of relevant ethical frameworks and challenges in human geography research It includes in depth reflections on a range of ethical dilemmas that arise in certain contextual conditions and spatial constructions that face those researching and teaching on spatial dimensions of social life With a focus on the increased need for specialist ethics training as part of postgraduate education in the Humanities and Social Sciences and the necessity for fostering sensitivity in cross cultural comparative research the book seeks to enable people to engage in ethical decision making and moral reasoning while conducting research Chapters examine the implications of geographical research for conceptualising ethics and discuss specific case studies from which more general conclusions linked to conceptual debates are drawn As a research based reference guide for tackling ethically sensitive projects and international differences in legal and institutional standards and requirements the book is useful for postgraduate and undergraduate students as well as academics teaching at senior levels      Moral Geographies David Marshall Smith, 2000 This book explores the interface between geography ethics and morality It considers questions that have haunted the past are subjects of controversy in the present and which affect the future Does distance diminish responsibility Should we interfere with the lives of those we do not know Is there a distinction between private and public space Which values and morals if any are absolute and which cultural communal or personal And are universal rights consistent with respect for difference David Smith shows how these questions play themselves out in politics planning development social and personal relations the exploitation of resources and competition for territory After introducing the essential elements of moral philosophy from Plato to postmodernism he examines the moral significance of concepts of landscape location and place proximity distance and community space and territory justice and nature He is concerned above all with the morality people practice to see how this varies according to geographical context and to assess the inevitability of its outcomes His argument is seamlessly interwoven with everyday observation and

vividly described case studies the latter include genocide and rescue during the Holocaust the conflicts over space between Israel and Palestine and within Israel itself and the social tensions and aspirations in post apartheid South Africa The meaning possibility and limits of social justice lie at the heart of the book That geographical context is vital to the understanding of moral practice and ethical theory is its central proposition The book is clearly and engagingly written The author has a student readership in mind but his book will appeal widely to geographers and others involved in planning development politics social theory and the analysis of the contemporary world      Relevance and Ethics in Geography Bruce Mitchell, 1983

*Ethics in Qualitative Research* Martyn Hammersley, Anna Traianou, 2012-05-17 All social researchers need to think about ethical issues Their salience has recently been increased by the pressures of ethical regulation particularly in the case of qualitative research But what are ethical issues And how should they be approached These are not matters about which there is agreement *Ethics in Qualitative Research* explores conflicting philosophical assumptions the diverse social contexts in which ethical problems arise and the complexities of handling them in practice The authors argue that the starting point for any discussion of research ethics must be the values intrinsic to research above all the commitment to knowledge production However the pursuit of inquiry is rightly constrained by external values and the book focuses on three of these minimising harm respecting autonomy and protecting privacy These external values are shown to be far from unequivocal in character often in conflict with one another or with the commitments of research and always subject to situational interpretation and practical judgment Nevertheless it is contended that in the present challenging times it is essential that qualitative researchers uphold research values Martyn Hammersley is Professor of Educational and Social Research at The Open University Anna Traianou is Senior Lecturer in the Department of Educational Studies Goldsmiths University of London
