Model-based Fault Diagnosis in Dynamic Systems Using Identification Techniques Silvio Simani, Cesare Fantuzzi, Ron J. Patton, 2013-11-11 Safety in industrial process and production plants is a concern of rising importance but because the control devices which are now exploited to improve the performance of industrial processes include both sophisticated digital system design techniques and complex hardware there is a higher probability of failure Control systems must include automatic supervision of closed loop operation to detect and isolate malfunctions quickly A promising method for solving this problem is analytical redundancy in which residual signals are obtained and an accurate model of the system mimics real process behaviour If a fault occurs the residual signal is used to diagnose and isolate the malfunction This book focuses on model identification oriented to the analytical approach of fault diagnosis and identification covering choice of model structure parameter identification residual generation and fault diagnosis and isolation Sample case studies are used to demonstrate the application of these techniques

Diagnosis and Fault-tolerant Control 1 Vicenc Puig, Silvio Simani, 2021-12-01 This book presents recent advances in fault diagnosis strategies for complex dynamic systems Its impetus derives from the need for an overview of the challenges of the fault diagnosis technique especially for those demanding systems that require reliability availability maintainability and safety to ensure efficient operations Moreover the need for a high degree of tolerance with respect to possible faults represents a further key point primarily for complex systems as modeling and control are inherently challenging and maintenance is both expensive and safety critical Diagnosis and Fault tolerant Control 1 also presents and compares different diagnosis schemes using established case studies that are widely used in related literature The main features of this book regard the analysis design and implementation of proper solutions for the problems of fault diagnosis in safety critical systems The design of the considered solutions involves robust data driven model based approaches
