Reliable Distributed Systems Srds 2003 Proceedings:

Introduction to Reliable Distributed Programming Rachid Guerraoui, Luís Rodrigues, 2006-05-01 In modern computing a program is usually distributed among several processes The fundamental challenge when developing reliable distributed programs is to support the cooperation of processes required to execute a common task even when some of these processes fail Guerraoui and Rodrigues present an introductory description of fundamental reliable distributed programming abstractions as well as algorithms to implement these abstractions The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments before moving to more sophisticated abstractions and more challenging environments Each core chapter is devoted to one specific class of abstractions covering reliable delivery shared memory consensus and various forms of agreement This textbook comes with a companion set of running examples implemented in Java These can be used by students to get a better understanding of how reliable distributed programming abstractions can be implemented and used in practice Combined the chapters deliver a full course on reliable distributed programming The book can also be used as a complete reference on the basic elements required to build reliable distributed applications

Dependable Systems: Software, Computing, Networks Jürg Kohlas, Bertrand Meyer, André Schiper, 2006-07-31 Modern civilization relies on a functioning information infrastructure As a result dependability has become a central issue in all disciplines of systems engineering and software architecture Theories methods and tools that help to master the problems encountered in the design process and the management of operations are therefore of utmost importance for the future of information and communication technology The present volume documents the results of a research program on Dependable Information and Communication Systems DICS The members of the project met in two workshops organized by the Hasler Foundation This state of the art survey contains 3 overview articles identifying major issues of dependability and presenting the latest solutions as well as 10 carefully selected and revised papers depicting the research results originating from those workshops The first workshop took place in M nchenwiler Switzerland in March 2004 and the second workshop which marked the conclusion of the projects in L wenberg Switzerland in October 2005 The papers are organized in topical sections on surveys dependable software dependable

computing and dependable networks *Engineering Self-Organising Systems* Sven A. Brueckner, Giovanni Di Marzo Serugendo, David Hales, 2006-05-01 This book constitutes the refereed post proceedings of the Third International Workshop on Engineering Self Organising Applications ESOA 2005 held in July 2005 as an associated event of AAMAS 2005 The 12 revised full papers and 6 revised short papers presented are organized in topical sections on novel self organising mechanisms methodologies models and tools for self organising applications and specific applications of self organising mechanisms

Global Data Management R. Baldoni, G. Cortese, F. Davide, 2006-07-26 An unforeseen growth of the volume and diversity of the data content and knowledge is being generated all over the globe Several factors lead to this growing complexity among them Size the sheer increase in the numbers of knowledge producers and users and in their production use capabilities Pervasiveness in space and time of knowledge knowledge producers and users Dynamicity new and old knowledge items will appear and disappear virtually at any moment and Unpredictability the future dynamics of knowledge are unknown not only at design time but also at run time The situation is made worse by the fact that the complexity of knowledge grows exponentially with the number of interconnected components The traditional approach of knowledge management and engineering is top down and centralised and depends on fixing at design time what can be expressed and how Global Data Management is playing a crucial role in the development of our networked distributed society Its importance has been recognised in the IST programme since several years in particular in its long term research part Future and Emerging Technologies FET Many of the papers included in this book refer to IST and FET projects currently running or recently completed

Building Dependable Distributed Systems Wenbing Zhao, 2014-03-06 A one volume guide to the most essential techniques for designing and building dependable distributed systems Instead of covering a broad range of research works for each dependability strategy this useful reference focuses on only a selected few usually the most seminal works the most practical approaches or the first publication of each approach explaining each in depth usually with a comprehensive set of examples Each technique is dissected thoroughly enough so that readers who are not familiar with dependable distributed computing can actually grasp the technique after studying the book Building Dependable Distributed Systems consists of eight chapters The first introduces the basic concepts and terminology of dependable distributed computing and also provides an overview of the primary means of achieving dependability Checkpointing and logging mechanisms which are the most commonly used means of achieving limited degree of fault tolerance are described in the second chapter Works on recovery oriented computing focusing on the practical techniques that reduce the fault detection and recovery times for Internet based applications are covered in chapter three Chapter four outlines the replication techniques for data and service fault tolerance This chapter also pays particular attention to optimistic replication and the CAP theorem Chapter five explains a few seminal works on group communication systems Chapter six introduces the distributed consensus problem and covers a number of Paxos family algorithms in depth The Byzantine generals problem and

its latest solutions including the seminal Practical Byzantine Fault Tolerance PBFT algorithm and a number of its derivatives are introduced in chapter seven The final chapter details the latest research results surrounding application aware Byzantine fault tolerance which represents an important step forward in the practical use of Byzantine fault tolerance techniques

The Oxford Handbook of Gossip and Reputation Francesca

Giardini, Rafael Wittek, 2019-05-22 Gossip and reputation are core processes in societies and have substantial consequences for individuals groups communities organizations and markets Academic studies have found that gossip and reputation have the power to enforce social norms facilitate cooperation and act as a means of social control The key mechanism for the creation maintenance and destruction of reputations in everyday life is gossip evaluative talk about absent third parties Reputation and gossip are inseparably intertwined but up until now have been mostly studied in isolation The Oxford Handbook of Gossip and Reputation fills this intellectual gap providing an integrated understanding of the foundations of gossip and reputation as well as outlining a potential framework for future research Volume editors Francesca Giardini and Rafael Wittek bring together a diverse group of researchers to analyze gossip and reputation from different disciplines social domains and levels of analysis Being the first integrated and comprehensive collection of studies on both phenomena each of the 25 chapters explores the current research on the antecedents processes and outcomes of the gossip reputation link in

contexts as diverse as online markets non industrial societies organizations social networks or schools International in scope the volume is organized into seven sections devoted to the exploration of a different facet of gossip and reputation Contributions from eminent experts on gossip and reputation not only help us better understand the complex interplay between two delicate social mechanisms but also sketch the contours of a long term research agenda by pointing to new problems and newly emerging cross disciplinary solutions
