Burnett, Yoshihiro Fukushima, MARTIN HAIGH, Yu Umezawa, 2008-09-11 The vulnerability of water resources due to climate change and human activities is globally increasing The phenomenon of hydrological change is complicated because of the combinations and interactions between natural climate fluctuation global warming and human activities including changes in land utilization The impact areas of hydrological changes are also not only within the basin but reach to the ocean through coastal water exchanges This book presents contributions focused on integrated water management from headwater to the ocean in a time of climate change and increasing population      Tourism and Geopolitics Derek R Hall, 2017-01-25 With 29 contributors from across Europe and beyond this work represents a unique and important resource that examines the many relationships between tourism and geopolitics with a focus on experiences drawn from Central and Eastern Europe It begins by assessing the changing nature of geopolitics from pejorative associations with Nazism to the more recent critical and feminist geopolitics of social science's cultural turn The book then addresses the important historical role of Central and Eastern Europe CEE in geopolitical thinking before exemplifying a range of contemporary interactions between tourism and geopolitics within this critical region Pursuing innovative analytical paths the book demonstrates the interrelated nature of tourism and geopolitics and emphasizes the freshness of this research area Addressing key principles and ideas which are applicable globally it is an essential source for researchers teachers and students of tourism geography political science and European studies as well as for diplomatic business and consultant practitioners      **Digital Soil Mapping with Limited Data** Alfred E. Hartemink, Alex B. McBratney, Maria de Lourdes Mendonça-Santos, 2008-07-11 Significant technological advances have been few and far between in the past approximately one hundred years of soil survey activities Perhaps one of the most innovative techniques in the history of soil survey was the introduction of aerial photographs as base maps for land mapping which replaced the conventional base map laboriously prepared by planimeter and alidade Such a relatively simple idea by today's standards revolutionized soil surveys by vastly increasing the accuracy and efficiency Yet even this innovative approach did not gain universal acceptance immediately and was hampered by a lack of aerial coverage of the world funds to cover the costs and in some cases a reluctance by some soil mappers and cartographers to change Digital Soil Mapping DSM

which is already being used and tested by groups of dedicated and innovative pedologists is perhaps the next great advancement in delivering soil survey information. However, like many new technologies, it too has yet to gain universal acceptance and is hampered by ignorance on the part of some pedologists and other scientists. DSM is a spatial soil information system created by numerical models that count for the spatial and temporal variations of soil properties based on soil formation and related environmental variables (Lagacherie and McBratney 2007).

**Selected Water Resources Abstracts**, 1990      **Guide to Excursion[s]**, 1967      *Landscapes and Landforms of the Czech Republic* Tomáš Pánek, Jan Hradecký, 2016-03-08. The book aims to present the unique geomorphological landscapes of the Czech Republic. The geomorphic uniqueness of this country benefits from the proximity to two distinct European geological domains: the old cratonized Bohemian Massif and the relatively young Tertiary fold and thrust belt of the Western Carpathians. *Landscapes and Landforms of the Czech Republic* introduces general physiographical characteristics of the landscape and presents the main driving factors leading to the evolution of the present landscape. The book contains twenty-two chapters describing the most interesting geomorphic landscapes of the Czech Republic. The selection of individual landscapes was based on visual exceptionality, e.g., sandstone landscapes of the Northern Bohemia; scientific importance, e.g., patterned grounds in the Sudetic Mountains; and historical relevance, e.g., mining of the Nizke Jeseniky Mountains. The final chapters of the book discuss the protection of geomorphic heritage in the Czech Republic.
