Gareth A. S. Edwards,John Wiseman,Amanda Cahill,2024-12-03 This book provides an accessible and critical appraisal of Australia s regional energy transition initiatives The book begins by situating Australian energy transition in the context of Australian and international debates about climate change and energy transition It then explores how energy transition planning was made possible in Australia s regional energy heartlands even while public transition planning was impossible The authors consider five case studies of key early transition initiatives in the Latrobe Valley Victoria Hunter Valley NSW Central Queensland Queensland Port Augusta South Australia and Collie Western Australia They explore how transition came onto the agenda and outline the key actors decision points and actions The authors critically assess the successes and failures of each initiative drawing out key learnings for other regions The book concludes by evaluating the key cross cutting themes emerging from the five case studies and draws out the lessons they teach about how to achieve a just transition This concise book will be of great interest to students and scholars of energy transitions climate action social justice economic renewal and regional transition challenges and strategies both in Australia and overseas Integrated Circuit

Authentication Mohammad Tehranipoor,Hassan Salmani,Xuehui Zhang,2013-10-04 This book describes techniques to verify the authenticity of integrated circuits ICs It focuses on hardware Trojan detection and prevention and counterfeit detection and prevention The authors discuss a variety of detection schemes and design methodologies for improving Trojan detection techniques as well as various attempts at developing hardware Trojans in IP cores and ICs While describing existing Trojan detection methods the authors also analyze their effectiveness in disclosing various types of Trojans and demonstrate several architecture level solutions **International and Regional Security** Benjamin Miller,2016-11-10 This volume is a

collection of the best essays of Professor Benjamin Miller on the subjects of international and regional security The book analyses the interrelationships between international politics and regional and national security with a special focus on the sources of international conflict and collaboration and the causes of war and peace More specifically it explains the sources of intended and unintended great power conflict and collaboration The book also accounts for the sources of regional war and peace by developing the concept of the state to nation balance Thus the volume is able to explain the variations in the outcomes of great power interventions and the differences in the level and type of war and peace in different eras and various parts of the world For example the book s model can account for recent outcomes such as the effects of the 2003 American intervention in Iraq the post 2011 Arab Spring and the conflicts between Russia and Ukraine The book also provides a model for explaining the changes in American grand strategy with a special focus on accounting for the causes of the invasion of Iraq in 2003 Finally the book addresses the debate on the future of war and peace in the 21st century This book will be essential reading for students of international security regional security Middle Eastern politics foreign policy and IR The Physical Oceanography of Sea Straits L.J. Pratt,2012-12-06 Suppose one were given the task of mapping the

general circulation in an unfamiliar ocean The ocean like our own is subdivided into basins and marginal seas interconnected by sea straits Assuming a limited budget for this undertaking one would do well to choose the straits as observational starting points To begin with the currents flowing from one basin to the next over possibly wide and time varying paths are confined to narrow and stable routes within the straits Mass heat and chemical budgets for individual basins can be formulated in terms of the fluxes measured across the straits using a relatively small number of instruments The confinement of the flow by a strait can also give rise to profound dynamical consequences including choking or hydraulic control a process similar to that by which a dam regulates the flow from a reservoir The funneling geometry can lead to enhanced tidal modulation and increased velocities giving rise to local instabilities mixing internal bores jumps and other striking hydraulic and fine scale phenomena In short sea straits represent choke points which are observationally and dynamically strategic and which contain a full range of fascinating physical processes

Middleware'98 Nigel Davies,Kerry Raymond,Jochen Seitz,2012-12-06 Welcome to Middleware 98 and to one of England's most beautiful regions In recent years the distributed systems community has witnessed a growth in the number of

conferences leading to difficulties in tracking the literature and a consequent loss of awareness of work done by others in this important field. The aim of Middleware 98 is to synthesise many of the smaller workshops and conferences in this area, bringing together research communities which were becoming fragmented. The conference has been designed to maximise the experience for attendees. This is reflected in the choice of a resort venue rather than a big city to ensure a strong focus on interaction with other distributed systems researchers. The programme format incorporates a question and answer panel in each session, enabling significant issues to be discussed in the context of related papers and presentations. The invited speakers and tutorials are intended to not only inform the attendees but also to stimulate discussion and debate.
