Urban America Reconsidered David L. Imbroscio, 2011-01-15 The aftermath of Hurricane Katrina laid bare the tragedy of American cities What the storm revealed about the social conditions in New Orleans shocked many Americans Even more shocking is how widespread these conditions are throughout much of urban America Plagued by ineffectual and inequalitarian governance acute social problems such as extreme poverty and social and economic injustice many American cities suffer a fate similar to that of New Orleans before and after the hurricane Gentrification and corporate redevelopment schemes merely distract from this disturbing reality Compounding this tragedy is a failure in urban analysis and scholarship Little has been offered in the way of solving urban America's problems and much of what has been proposed

or practiced remains profoundly misguided in David Imbroscio's view. In *Urban America Reconsidered* he offers a timely response. He urges a reconsideration of the two reigning orthodoxies in urban studies: regime theory, which provides an understanding of governance in cities, and liberal expansionism, which advocates regional policies linking cities to surrounding suburbs. Declaring both approaches to be insufficient and sometimes harmful, Imbroscio illuminates another path for urban America: remaking city economies via an array of local economic alternative development strategies or LEADS. Notable LEADS include efforts to build community-based development institutions, worker-owned firms, publicly controlled businesses, and webs of interdependent entrepreneurial enterprises. Equally notable is the innovative use of urban development tools to generate indigenous, stable, and balanced growth in local economies. *Urban America Reconsidered* makes a strong case for the LEADS approach for constructing progressive urban regimes and addressing America's deepest urban problems.

**Industries without Smokestacks** Richard Newfarmer, John Page, Finn Tarp, 2018-10-25. By 2030, more than three quarters of the world's absolute poor are projected to live in Africa. Accelerating economic growth is key to rising incomes on the continent, and central to this challenge is establishing activities that are capable of employing large numbers of unskilled workers that can raise productivity through innovation and that can power growth through exports. Such structural transformation is a key driver of growth, and between 1950-1996, about half of the economic catch-up by developing countries led by East Asia was due to rising productivity in manufacturing combined with growing agricultural output. Africa, however, has lagged behind. In 2014, the average share of manufacturing in GDP in sub-Saharan Africa hovered around 10 per cent, unchanged from the 1970s, leading some observers to be pessimistic about Africa's potential to catch the wave of sustained rapid growth and rising incomes. *Industries Without Smokestacks: Industrialization in Africa Reconsidered* challenges this view. It argues that other activities sharing the characteristics of manufacturing, including tourism, ICT, and other services, as well as food processing and horticulture, are beginning to play a role analogous to that played by manufacturing in East Asia. This reflects not only changes in the global organization of industries since the early era of rapid East Asian growth but also advantages unique to Africa. These industries without smokestacks offer new opportunities for Africa to grow in coming decades.

*Population Policies Reconsidered* Gita Sen, Adrienne Germain, Lincoln C. Chen, 1994. *Population Policy Reconsidered* brings together a rare combination of scholars, feminists, social activists, and policy makers across many disciplines to critically reexamine the scientific foundation of contemporary population policies. This book explores population policy dilemmas based on the perspective of ethics, women's empowerment, and health and human rights. The seventeen chapters are centered around the premise that the single-minded pursuit of demographic goals may not be the most effective means of achieving policy objectives, for such may lead to the abuse or violation of choice and human rights, especially of women. Rather, the book explores the alternative idea that population policies should focus on those ultimate aims of development that are linked to human reproduction, health, social empowerment, and human rights. If respectful of

individuals especially women such policies are likely to promote better individual welfare and may well also result in desirable demographic outcomes      *The Routledge Handbook to Regional Development in Central and Eastern Europe* Gábor Lux,Gyula Horváth,2017-07-06 Twenty five years into transformation Central and Eastern European regions have undergone substantial socio economic restructuring integrating into European and global networks and producing new patterns of regional differentiation and development Yet post socialist modernisation has not been without its contradictions manifesting in increasing social and territorial inequalities Recent studies also suggest there are apparent limits to post socialist growth models accompanying a new set of challenges within an increasingly uncertain world Aiming to deliver a new synthesis of regional development issues at the crossroads between post socialism and post transition this book identifies the main driving forces of spatial restructuring in Central and Eastern Europe and charts the different regional development paths which take shape against the backdrop of post crisis Europe A comparative approach is used to highlight common development challenges and the underlying patterns of socio economic differentiation alike The issues investigated within the Handbook extend to a discussion of the varied economic consequences of transition the social structures and institutional systems which underpin development processes and the broadly understood sustainability of Central and Eastern Europe s current development model This book will be of interest to academics and policymakers working in the fields of regional studies economic geography development studies and policy      **The Rise of the Creative**

**Class--Revisited** Richard Florida,2014-01-07 A provocative new way to think about why we live as we do today and where we might be headed Initially published in 2002 The Rise of the Creative Class quickly achieved classic status for its identification of forces then only beginning to reshape our economy geography and workplace Weaving story telling with original research Richard Florida identified a fundamental shift linking a host of seemingly unrelated changes in American society the growing importance of creativity in people s work lives and the emergence of a class of people unified by their engagement in creative work Millions of us were beginning to work and live much as creative types like artists and scientists always had Florida observed and this Creative Class was determining how the workplace was organized what companies would prosper or go bankrupt and even which cities would thrive In The Rise of the Creative Class Revisited Florida further refines his occupational demographic psychological and economic profile of the Creative Class incorporates a decade of research and adds five new chapters covering the global effects of the Creative Class and exploring the factors that shape quality of place in our changing cities and suburbs      **Streets Reconsidered** Daniel Iacofano,Mukul Malhotra,2018-10-26

*Streets Reconsidered* is a fundamental rethinking of America s streets It explores the future of streets and what America s roadways could be if they were designed for living instead of just driving The book includes detailed design guidelines fully illustrated four color case studies of successful streets from around the world a new paradigm of streets designed to promote human functions turning new design ideas into a series of best practices that can be applied to any community What would

streets look like if they accommodated people of all ages and abilities promoted healthy urban living social interaction and business the movement of people and goods and regeneration of the environment Streets Reconsidered pushes beyond the current standards focusing on the planning design and construction of streets as a method for improving our built environment for everyone The book is organized by the functions of a street mobility way finding commerce social gathering events and programming play and recreation urban agriculture green infrastructure and image and identity Streets Reconsidered is the essential resource for city planners urban designers developers architects landscape architects policymakers and community members who share a passion for great urban human spaces **Handbook of Social Capital and Regional Development** Hans Westlund, Johan P. Larsson, 2016-12-30 The role of social capital in regional development is a multifaceted topic which is studied all over the world using various methods and across numerous disciplines It has long been evident that social capital is important for regional development however it is less clear how this works in practice Do all types of social capital have the same effects and are different kinds of regions impacted in the same way This book is the first to offer an overview of this rapidly expanding field of research and to thoroughly analyse the complex issue of social capital and regional development **Handbook of Regional Growth and Development Theories** Roberta Capello, Peter Nijkamp, 2010-01-01 This Handbook is essential reading for anyone with an interest in the explanation of economic growth in the space economy The editors and the individual contributors are to be congratulated on producing such an important collection of review essays which is destined to become one of the definitive reference books on the subject John McCombie Scienze Regionali offers a valuable up to date overview of many aspects of these important theoretical developments Peter Wood Environment development theories of innovation knowledge and space and regional production factors and growth theories and space This book will be a source of reference and information for both scholars and students in the area of regional economics **European Regional Growth** Bernard Fingleton, 2013-06-29 Looking into the future and trying to visualize long run regional disparities is difficult There is no agreed single theory to guide our model building although some insight can be gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic Many of the Chapters in the book employ the methods of spatial econometrics Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed

data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries

**Federalists Reconsidered** Doron S. Ben-Atar, Barbara B. Oberg, 1998 These essays demonstrate that American political culture was fashioned in a dialogue between Federalists and Jeffersonians They portray an active Federalist coalition that offered a vibrant intellectual and political alternative throughout the era of the early republic Cutting across boundaries of region culture race gender and class Federalists struggled with the problems of nation building national identity and economic development

**Reconsidering Regions in an Era of New Nationalism** Alex Finkelstein, Anne F. Hyde, 2023-11 Regions connect and divide us even as global economies weather and germs batter us Historians literary scholars and social scientists use region to ground and challenge ideas about national belonging In *Reconsidering Regions in an Era of New Nationalism* Alexander Finkelstein and Anne F Hyde have assembled leading scholars of regionalism to discuss the relationship of region to nation The contributors explore how historical forces have changed regional associations and how regional associations have changed culture and history The themes of culture space and institutions organize this volume contributors historicize how race and racial thinking have evolved as a major force to define region and nation over time the essays raise questions about the stability and validity of canonical regions in U S history to find new complexity in how these blocs form and how they understand themselves and they focus on historicist and conjunctural trends and how institutions and ordinary people shape regional identities through politics and cultural change throughout history Challenging ideas about both national belonging and local association the contributors emphasize how regional analysis deepens understanding of migration race borders infrastructure climate and Native sovereignty

Regional Development Reconsidered Private Sector Council on Urbanisation, 1989 Regional Economic Integration in West Africa Diery Seck, 2013-11-18 This book presents a number of key studies pertaining to the most pressing challenges of economic regional integration in West Africa The issues of monetary coordination foreign exchange volatility taxation savings and macroeconomic convergence are investigated from a regional perspective The characteristics of West Africa's trade policy are reviewed and assessed in comparison to that of the Southern African Development Community SADC The extent to which regional integration can tackle the challenge of unemployment is the focus of studies on labour markets Development of the private sector and coordination of regional cross border transportation are examined through the lens of economic collaboration between Arab and African countries The book provides fresh new answers to persistent development questions and sheds new light on long held views that are either incomplete or no longer true It also opens new perspectives on the search for sustainable avenues for Africa's development In this regard it may contribute to the emergence of a new paradigm on Africa's development process and its science based policy oriented implementation

The New European Rurality Eleanor Morgan, 2016-12-05 Public concern over issues such as urban sprawl the conversion of agricultural land and the

management of public lands has never been greater Presenting a novel synopsis of the economics of land use this book examines the critical issues involved such as transportation and technological change and the economic principles behind them Chapters are specifically designed to demonstrate the types of land use questions economic analysis can answer the types of methods that might be employed to answer the questions and the potential uses of economic analysis in policy making The book is a key contribution to contemporary land use studies highlighting the main methodological and public policy issues that will be central to research on the economics of land use change in the future

External Economies and Cooperation in Industrial Districts Roberta Rabellotti, 2016-07-27 This book aims to explore the potential of the industrial district model through the analysis of Italy the land of districts and in Mexico a less developed country Empirical research assesses the extent to which the core characteristics of the model correspond to the clusters analyzed The investigation focuses upon external economies and cooperation which stem directly from the industrial district model with particular emphasis upon the intense linkages existing within the clusters examined

**Growth and Innovation of Competitive Regions** Ugo Fratesi, Lanfranco Senn, 2008-12-29 Time Time b a Space Space Time Time c d Space Space Fig 1 Different possible scales for growth and innovation analyses spatial dimension the sectoral dimension and the time dimension are represented In Fig 1a regional development analyses are revealed where the economy is sliced vertically into regions and their dynamics are investigated The study of the evolution of industries typical of evolutionary industrial economics is represented in Fig 1b where the economy is divided horizontally into sectoral slices This approach has progressed considerably in recent years see Malerba 2006 for a recent survey Modifications of industries have important spatial implications which however are not normally at the core of these analyses even though spatial patterns of innovation differ greatly from sector to sector Breschi 2000 Our approach operates in the manner of Fig 1a and we will focus on regions extending the analysis to industries only where this is regionally and structurally relevant Hence the approach in the book belongs to the tradition of regional development theories but in contrast to the more traditional analyses we will not consider the region as an economic unit per se Rather interactions between and within regions are very relevant to the performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters
