Singh, 2012-12-06 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are responsible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and

risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14-17 1986 at Louisiana State University Baton Rouge Louisiana Geoinformatics and Atmospheric Science Tomasz Niedzielski, Krzysztof Migala, 2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales *Hydrological Extremes* Lars Gottschalk, 1999 Regionalization of Watersheds A.R. Rao, V. V. Srinivas, 2010-10-28 Clustering techniques are used to identify groups of watersheds which have similar flood characteristics This book the first of its kind is a comprehensive reference on how to use these techniques for regional flood frequency analysis It provides a detailed account of several recently developed clustering techniques including those based on fuzzy set theory It also brings together formerly scattered research findings on the application of clustering techniques to RFFA **Statistical Distributions for Flood Frequency Analysis** C. Cunnane, 1989 **Flood-frequency Analyses** Tate Dalrymple, 1960 *In Extremis* Jürgen Kropp, Hans-Joachim Schellnhuber, 2010-11-03 The book addresses a weakness of current methodologies used in extreme value assessment i.e. the assumption of stationarity which is not given in reality With respect to this issue a lot of new developed technologies are presented i.e. influence of trends vs internal correlations quantitative uncertainty assessments etc The book not only focuses on artificial time series data but has a close link to empirical measurements in order to make the suggested methodologies applicable for practitioners in water management and meteorology Fundamentals of Statistical Hydrology Mauro Naghettini, 2016-10-26 This textbook covers the main applications of statistical methods in hydrology It is written for upper undergraduate and graduate students but can be used as a helpful guide for hydrologists geographers meteorologists and engineers The book is very useful for teaching as it covers the main topics of the subject and contains many worked out examples and proposed exercises Starting from simple notions of the essential graphical examination of hydrological data the book gives a complete account of the role that probability considerations must play during modelling diagnosis of model fit prediction and evaluating the uncertainty in model predictions including the essence of Bayesian application in hydrology and statistical methods under nonstationarity

The book also offers a comprehensive and useful discussion on subjective topics such as the selection of probability distributions suitable for hydrological variables On a practical level it explains MS Excel charting and computing capabilities demonstrates the use of Winbugs free software to solve Monte Carlo Markov Chain MCMC simulations and gives examples of free R code to solve nonstationary models with nonlinear link functions with climate covariates

River and Coastal Engineering Ramakar Jha,Vijay P. Singh,Vivekanand Singh,L.B. Roy,Roshni Thendiyath,2022-08-03 This book deals with important topics of current interest such as climate change floods drought and hydrological extremes The impact of climate change on water resources is drawing worldwide attention in these days water resources in many countries are already stressed and climate change along with burgeoning population rising standard of living and increasing demand are adding to the stress Further river basins are becoming less resilient to climatic vagaries Fundamental to addressing these issues is hydrological modelling which is covered in these books Further integrated water resources management is vital to ensure water and food security Integral to the management is groundwater and solute transport The books encompass tools that will be useful to mitigate the adverse consequences of natural disasters This book is useful for those working in river and coastal engineering River Engineering is important for fluvial hydraulics sediment transport morphometry desilting trap efficiency silting and desilting process Coastal engineering includes storm surge forecast optimization of harbour wave modelling and shoreline changes
