Regular Differential Forms Contemporary Mathematics Vol 79:

    Regular Differential Forms Ernst Kunz,Rolf Waldi,1988 Suitable for students and researchers in commutative algebra algebraic geometry and neighboring disciplines this book introduces various sheaves of differential forms for equidimensional morphisms of finite type between noetherian schemes the most important being the sheaf of regular differential forms   <u>Triangulated Categories</u> Thorsten Holm,Peter Jørgensen,Raphaël Rouquier,2010-06-24 A 2010 collection of survey articles by leading experts covering fundamental aspects of triangulated categories as well as applications in algebraic geometry representation theory commutative algebra microlocal analysis and algebraic topology This is a valuable reference for experts and a useful introduction for graduate students entering the field   <u>Differential Forms in Mathematical Physics</u> ,2009-06-17 Differential Forms in Mathematical Physics   **Notices of the American Mathematical Society** American Mathematical Society,1992   **Multidimensional Residue Theory and Applications** Alekos Vidras,Alain Yger,2023-10-18 Residue theory is an active area of complex analysis with connections and applications to fields as diverse as partial differential and integral equations computer algebra arithmetic or diophantine geometry and mathematical physics Multidimensional Residue Theory and Applications defines and studies multidimensional residues via analytic continuation for holomorphic bundle valued current maps This point of view offers versatility and flexibility to the tools and constructions proposed allowing these residues to be defined and studied outside the classical case of complete intersection The book goes on to show how these residues are algebraic in nature and how they relate and apply to a wide range of situations most notably to membership problems such as the Brian on Skoda theorem and Hilbert s Nullstellensatz to arithmetic intersection theory and to tropical geometry This book will supersede the existing literature in this area which dates back more than three decades It will be appreciated by mathematicians and graduate students in multivariate complex analysis But thanks to the gentle treatment of the one dimensional case in Chapter 1 and the rich background material in the appendices it may also be read by specialists in arithmetic diophantine or tropical geometry as well as in mathematical physics or computer algebra   *Contemporary Trends in Algebraic Geometry and Algebraic Topology* Shiing-Shen Chern,2002 The Wei Liang Chow and Kuo Tsai Chen Memorial Conference was proposed and held by Prof S S Chern in Nankai Institute of Mathematics It was devoted to memorializing those two outstanding and original Chinese mathematicians who had made significant contributions to algebraic geometry and algebraic topology respectively It also provided a forum for leading mathematicians to expound and discuss their views on new ideas in these fields as well as trends in 21st Century mathematics About 100 mathematicians participated in the conference including Sir Michael Atiyah Jacob Palis Phillip Griffiths David Eisenbud Philippe Tondeur Yujiro Kawamata Tian Gang etc This invaluable volume contains the selected papers presented at the conference The topics include canonical maps of Gorenstein 3 folds fundamental groups of algebraic curves Chen s interated integrals algebraic fiber spaces and others   **Commutative Algebra** David Eisenbud,2013-12-01

Commutative Algebra is best understood with knowledge of the geometric ideas that have played a great role in its formation in short with a view towards algebraic geometry The author presents a comprehensive view of commutative algebra from basics such as localization and primary decomposition through dimension theory differentials homological methods free resolutions and duality emphasizing the origins of the ideas and their connections with other parts of mathematics Many exercises illustrate and sharpen the theory and extended exercises give the reader an active part in complementing the material presented in the text One novel feature is a chapter devoted to a quick but thorough treatment of Grobner basis theory and the constructive methods in commutative algebra and algebraic geometry that flow from it Applications of the theory and even suggestions for computer algebra projects are included This book will appeal to readers from beginners to advanced students of commutative algebra or algebraic geometry To help beginners the essential ideals from algebraic geometry are treated from scratch Appendices on homological algebra multilinear algebra and several other useful topics help to make the book relatively self contained Novel results and presentations are scattered throughout the text   Trends in Contemporary Mathematics Vincenzo Ancona,Elisabetta Strickland,2014-08-27 The topics faced in this book cover a large spectrum of current trends in mathematics such as Shimura varieties and the Lang lands program zonotopal combinatorics non linear potential theory variational methods in imaging Riemann holonomy and algebraic geometry mathematical problems arising in kinetic theory Boltzmann systems Pell s equations in polynomials deformation theory in non commutative algebras This work contains a selection of contributions written by international leading mathematicians who were speakers at the INdAM Day an initiative born in 2004 to present the most recent developments in contemporary mathematics   **The Scientific Legacy of Poincare** Éric Charpentier,Etienne Ghys,Annick Lesne,2010 Henri Poincare 1854 1912 was one of the greatest scientists of his time perhaps the last one to have mastered and expanded almost all areas in mathematics and theoretical physics In this book twenty world experts present one part of Poincare s extraordinary work Each chapter treats one theme presenting Poincare s approach and achievements   *Commutative Algebra* Irena Peeva,2013-02-01 This contributed volume brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Algebraic Combinatorics Hyperplane Arrangements Homological Algebra and String Theory The book aims to showcase the area especially for the benefit of junior mathematicians and researchers who are new to the field it will aid them in broadening their background and to gain a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research   *Algebra, Geometry and Mathematical Physics* Abdenacer Makhlouf,Eugen Paal,Sergei D. Silvestrov,Alexander Stolin,2014-06-17 This book collects the proceedings of the Algebra Geometry and Mathematical Physics Conference held at the University of Haute Alsace France October 2011

Organized in the four areas of algebra geometry dynamical symmetries and conservation laws and mathematical physics and applications the book covers deformation theory and quantization Hom algebras and n ary algebraic structures Hopf algebra integrable systems and related math structures jet theory and Weil bundles Lie theory and applications non commutative and Lie algebra and more The papers explore the interplay between research in contemporary mathematics and physics concerned with generalizations of the main structures of Lie theory aimed at quantization and discrete and non commutative extensions of differential calculus and geometry non associative structures actions of groups and semi groups non commutative dynamics non commutative geometry and applications in physics and beyond The book benefits a broad audience of researchers and advanced students   *Invariants of quadratic differential forms* Oswald Veblen,1927

Modern Aspects of Dynamical Systems Manfred Einsiedler,Giovanni Forni,Vadim Kaloshin,Jasmin Raissy,2024-10-02 This book provides an overview of recent advances in the theory of dynamical systems with a particular emphasis on their connections to other areas of mathematical research including number theory geometry mathematical physics complex analysis and celestial mechanics Compiling the lecture notes from some of the contributions presented at the C I M E school Modern Aspects of Dynamical Systems held in Cetraro in August 2021 the contributions are the following Homogeneous dynamics and Diophantine problems by Manfred Einsiedler Effective ergodic theory for translation flow by Giovanni Forni Integrability and rigidity for convex billiards by Vadim Kaloshin Holomorphic dynamics by Jasmin Raissy and Exponentially small phenomena and its role in the dynamics by Tere Martinez Seara These notes are suitable for graduate students and young researchers interested in an introduction to some of the modern research areas within the field of dynamical systems

Microlocal Analysis and Inverse Problems in Tomography and Geometry Eric Todd Quinto,Plamen D. Stefanov,Gunther Uhlmann,2024-09-23 Microlocal Analysis has proven to be a powerful tool for analyzing and solving inverse problems including answering questions about stability uniqueness recovery of singularities etc This volume presents several studies on microlocal methods in problems in tomography integral geometry geodesic transforms travel time tomography thermoacoustic tomography Compton CT cosmology nonlinear inverse problems and others   **Regular Functions of a Quaternionic Variable** Graziano Gentili,Caterina Stoppato,Daniele C. Struppa,2022-09-23 This book surveys the foundations of the theory of slice regular functions over the quaternions introduced in 2006 and gives an overview of its generalizations and applications As in the case of other interesting quaternionic function theories the original motivations were the richness of the theory of holomorphic functions of one complex variable and the fact that quaternions form the only associative real division algebra with a finite dimension n 2 Slice regular functions quickly showed particularly appealing features and developed into a full fledged theory while finding applications to outstanding problems from other areas of mathematics For instance this class of functions includes polynomials and power series The nature of the zero sets of regular functions is particularly interesting and strictly linked to an articulate algebraic structure which allows several types of series

expansion and the study of singularities Integral representation formulas enrich the theory and are fundamental to the construction of a noncommutative functional calculus Regular functions have a particularly nice differential topology and are useful tools for the construction and classification of quaternionic orthogonal complex structures where they compensate for the scarcity of conformal maps in dimension four This second expanded edition additionally covers a new branch of the theory the study of regular functions whose domains are not axially symmetric The volume is intended for graduate students and researchers in complex or hypercomplex analysis and geometry function theory and functional analysis in general
