Neural Networks Udo Seiffert, 2001-09-25 The Self Organizing Map SOM is one of the most frequently used architectures for unsupervised artificial neural networks Introduced by Teuvo Kohonen in the 1980s SOMs have been developed as a very powerful method for visualization and unsupervised classification tasks by an active and innovative community of international researchers A number of extensions and modifications have been developed during the last two decades The reason is surely not that the original algorithm was imperfect or inadequate It is rather the universal applicability and easy handling of the SOM Compared to many other network paradigms only a few parameters need to be arranged and thus also for a beginner the network leads to useful and reliable results Nevertheless there is scope for improvements and sophisticated new developments as this book impressively demonstrates The number of published applications utilizing the SOM appears to be unending As the title of this book indicates the reader will benefit from some of the latest theoretical developments and

will become acquainted with a number of challenging real world applications Our aim in producing this book has been to provide an up to date treatment of the field of self organizing neural networks which will be accessible to researchers practitioners and graduated students from diverse disciplines in academics and industry We are very grateful to the father of the SOMs Professor Teuvo Kohonen for supporting this book and contributing the first chapter

Advanced Signal Processing Handbook Stergios Stergiopoulos, 2017-09-08 Advances in digital signal processing algorithms and computer technology have combined to produce real time systems with capabilities far beyond those of just few years ago Nonlinear adaptive methods for signal processing have emerged to provide better array gain performance however they lack the robustness of conventional algorithms The challenge remains to develop a concept that exploits the advantages of both a scheme that integrates these methods in practical real time systems The Advanced Signal Processing Handbook helps you meet that challenge Beyond offering an outstanding introduction to the principles and applications of advanced signal processing it develops a generic processing structure that takes advantage of the similarities that exist among radar sonar and medical imaging systems and integrates conventional and nonlinear processing schemes

Nonlinear System Identification Oliver Nelles, 2020-09-09 This book provides engineers and scientists in academia and industry with a thorough understanding of the underlying principles of nonlinear system identification It equips them to apply the models and methods discussed to real problems with confidence while also making them aware of potential difficulties that may arise in practice Moreover the book is self contained requiring only a basic grasp of matrix algebra signals and systems and statistics Accordingly it can also serve as an introduction to linear system identification and provides a practical overview of

the major optimization methods used in engineering The focus is on gaining an intuitive understanding of the subject and the practical application of the techniques discussed The book is not written in a theorem proof style instead the mathematics is kept to a minimum and the ideas covered are illustrated with numerous figures examples and real world applications In the past nonlinear system identification was a field characterized by a variety of ad hoc approaches each applicable only to a very limited class of systems With the advent of neural networks fuzzy models Gaussian process models and modern structure optimization techniques a much broader class of systems can now be handled Although one major aspect of nonlinear systems is that virtually every one is unique tools have since been developed that allow each approach to be applied to a wide variety of systems
