Regulating Agriculture Philip Lowe, Terry Marsden, Sarah Whatmore, 2023-06-08 Originally published in 1994 this volume brings together a set of essays reflecting the complex political social and institutional problems encountered by modern states in seeking to manage their agricultural sectors Drawing on different national and international viewpoints the essays present original analyses of agricultural regulation in a comparative context The aspects covered include the roots of the post war food order the roles of corporatism agribusiness and technological change the challenge of de regulation and environmental reforms the introduction of market principles and mechanisms into centrally planned economies and the efforts to forge a new order in international trade *Agriculture, Forestry, and Fishing Research at NIOSH* Institute of Medicine, National Research Council, Board on Agriculture and Natural Resources, Committee to Review the NIOSH Agriculture, Forestry, and Fishing Research Program, 2008-06-10 The agriculture forestry and fishing sectors are the cornerstone of industries that produce food fiber and biofuel The National Institute for Occupational Safety and Health NIOSH conducts research in order to improve worker safety and health in these sectors This National Research Council book reviews the NIOSH Agriculture Forestry and Fishing Program to evaluate the 1 relevance of its work to improvements in occupational safety and health and 2 the impact of research in reducing workplace illnesses and injuries The assessment reveals that the program has made meaningful contributions to improving worker safety and health in these fields To enhance the relevance and impact of its work and fulfill its mission the NIOSH Agriculture Forestry and Fishing Program should provide national leadership coordination of research and activities to transfer findings technologies and information into practice The program will also benefit from establishing strategic goals and implementing a comprehensive surveillance system in order to better identify and track worker populations at risk **Agriculture**, 2020-07-15 Agriculture has existed for approximately 12 000 years and has played an important role in shaping human history It enabled the development of the United States and the family farm has become an indelible image of American resilience and self sufficiency However with changes in technology the global economy and our understanding of nutritional needs the field of agriculture has been forced to adjust to meet twenty first century demands Is it necessary that factory farms displace family farms Should the government play a larger role in regulating technological innovations like GMOs This volume guides readers to examine these key issues and many others **H.R. 1633, the Farm Dust Regulation Prevention Act of 2011** United States. Congress. House. Committee on Energy and Commerce. environment requires international cooperation Climate change tropical deforestation biodiversity loss ozone depletion hazardous wastes and ocean pollution are among several issues that have brought national governments together in common purpose As they have worked to mitigate these global problems governments have developed a wide variety of environmental regime designs Some global environmental regimes are more institutionally integrated than others Some regimes impose legally binding obligations on countries while others involve non binding commitments And some regimes involve global standards and rules while others leave national commitments up to countries discretion What explains the pattern of regime design in global environmental governance Alexander Ovodenko demonstrates that national governments have developed different institutional responses to global issues because the markets producing environmental pollution impose varying constraints and create varying opportunities for governments Contrary to the prevailing literature governments are more inclined to impose stringent rules and regulations on oligopolistic industries than on competitive ones The capital resources and innovation potential of oligopolistic businesses make them more cost effective and economical in reducing pollution and meeting global standards than businesses in competitive industries In global governance oligopolistic businesses face a double edged sword arising from their wealth and market concentrations Regulating the Polluters inverts the literature on regulatory capture and collective action by presenting empirical evidence of the irony of market power in global environmental politics
