Science and Decisions National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Improving Risk Analysis Approaches Used by the U.S. EPA, 2009-03-24 Risk assessment has become a dominant public policy tool for making choices based on limited resources to protect public health and the environment It has been instrumental to the mission of the U S Environmental Protection Agency EPA as well as other federal agencies in evaluating public health concerns informing regulatory and technological decisions prioritizing research needs and funding and in developing

approaches for cost benefit analysis However risk assessment is at a crossroads Despite advances in the field risk assessment faces a number of significant challenges including lengthy delays in making complex decisions lack of data leading to significant uncertainty in risk assessments and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment Science and Decisions makes practical scientific and technical recommendations to address these challenges This book is a complement to the widely used 1983 National Academies book Risk Assessment in the Federal Government also known as the Red Book The earlier book established a framework for the concepts and conduct of risk assessment that has been adopted by numerous expert committees regulatory agencies and public health institutions The new book embeds these concepts within a broader framework for risk based decision making Together these are essential references for those working in the regulatory and public health fields *Risk, Science, and Politics* Kathryn Harrison, George Hoberg, 1994-11-18 Paying particular attention to how politicians and bureaucrats in the two countries deal with the scientific uncertainty that pervades environmental decision making Harrison and Hoberg analyse case studies of seven controversial substances suspected of causing cancer in humans the pesticides Alar and alachlor urea formaldehyde foam insulation radon gas dioxin saccharin and asbestos They weigh the strengths and weaknesses of each country's approach according to five criteria stringency and timeliness of the regulatory decision balancing of risks and benefits by decision makers opportunities for public participation and the interpretation of science in regulatory decision making The Canadian approach is exemplified by closed decision making case by case review that relies heavily on expert judgement and limited public debate about the scientific basis of regulatory decisions In contrast regulatory science in the United States is characterized by publication of lengthy rationales for regulatory decisions reliance on standardized procedures for risk assessment and controversy surrounding the interpretation of scientific evidence **Powerless Science?** Soraya Boudia, Nathalie Jas, 2014 In spite of decades of research on toxicants along with the growing role of scientific expertise in public policy and the unprecedented rise in the number of national and international institutions dealing with environmental health issues problems surrounding contaminants and their effects on health have never appeared so important sometimes to the point of appearing insurmountable This calls for a reconsideration of the roles of scientific knowledge and expertise in the definition and management of toxic issues which this book seeks to do It looks at complex historical social and political dynamics made up of public controversies environmental and health crises economic interests and political responses and demonstrates how and to what extent scientific knowledge about toxicants has been caught between scientific economic and political imperatives Soraya Boudia is Professor of Science Technology and Innovation Studies at the University of Paris Est Marne la Vall e Her scholarly work focuses on the transnational government of technological and health environmental risks She has co edited a special issue of History and Technology Risk and risk Society in Historical Perspective 2007 and Toxicants Health and Regulations Since 1945 Pickering Chatto 2013 both with Nathalie Jas Nathalie Jas is a Senior

Regulating Risk Thomas A. Burke, 1993 Summarizes the presentations made at a conference on the subject of health safety and environmental risk Discusses such issues as the roles and limitations of science in understanding risk how federal agencies charged with safeguarding the public from risk decide which hazards to address whether traditional approaches to assessing risk are working to promote and enhance public safety the influence of politics economics and perceptions on risk policy how the public perceives risk and what role the media plays in creating those perceptions **Regulating Risk Through Private Law** Matthew Dyson, 2018 This volume sets out for nine significant legal systems an overarching conception of risk in legal theory particularly of the linked role of risk taking in generating liability and in liability regulating risk It is the first book length comparative attempt to explain what risk based reasoning adds to private law with a core focus on the law of tort *The Government of Risk* Christopher Hood, Henry Rothstein, Robert Baldwin, 2001 Why does regulation vary so dramatically from one area to another Why are some risks regulated aggressively and others responded to only modestly Is there any logic to the techniques we use in risk regulation These key questions are explored in *The Government of Risk* This book looks at a number of risk regulations regimes considers the respects in which they differ and examines how

these differences can be explained Analysing regulation in terms of regimes allows us to see the rich multi dimensional nature of risk regulation It exposes the thinness of society wide analyses of risk controls and it offers a perspective that single case studies cannot reach Regimes analysis breaks down the components of risk regulation systems and shows how these interact It also shows how different parts of the same regime may be shaped by different factors and have to be understood in quite different ways The Government of Risk shows how such an approach is of high policy relevance as well as of considerable theoretical importance From Economy to Society Bettina Lange,Dania Thomas,Austin Sarat,2013-11-11 Leading socio legal scholars explore whether and how the idea of harnessing the regulatory capacity of a social sphere provides a new analytical lens that can provide fresh insights into transnational risk regulation Transnational Narratives and Regulation of GMO Risks Giulia Claudia Leonelli,2021-11-04 This book provides an innovative insight into the regulatory conundrum of genetically modified organisms GMOs deploying transnational legal analysis as a methodological framework to explore the most controversial area of risk governance The book deconstructs hegemonic and counter hegemonic transnational narratives on the governance of GMO risks cutting across US law EU law the WTO Agreement on Sanitary and Phytosanitary Measures and hybrid standard setting regimes Should uncertain risks be run unless adverse effects have been conclusively established and should regulators only act where this is cost benefit effective Should risk managers make a convincing case that a product or process is safe enough for the relevant uncertain risks to be socially acceptable How can intractable transnational regulatory conflicts be solved The book complements a close analysis of regulatory frameworks and case law with a more encompassing perspective on the political socio economic and distributional implications of different approaches to the regulation of health and environmental risks at times of globalisation The GMO deadlock thus becomes a lens through which to investigate the underlying value systems goals and impacts of transnational discourses on risk governance Against this backdrop the normative strand of analysis points to the limited ability of science and procedural deliberation to generate authentic agreement and to identify normatively legitimate solutions in the absence of pre existing shared perspectives **Regulating Risks in the European Union** Maria Weimer,Anniek de Ruijter,2017-10-05 A growing body of EU law and regulation is preoccupied with the protection of EU citizens from health and environmental risks Which chemicals are safe and should be allowed on the market How should the EU respond to public health emergencies such as Ebola and other infectious diseases Regulatory responses to these questions confront deep uncertainty limited knowledge and societal contestation In a time where the use of scientific expertise in EU policy making is particularly contested this book offers a timely contribution to both the academic and policy debate on the role of specialised expertise in EU public decision making on risk and technology as well as on its intertwinement with executive power It draws on insights from law governance political sciences and science and technology studies bringing together leading scholars in this field Contributions are drawn together by a shared theoretical perspective namely by their use of co production as an analytical

lens to study the intricate interplay between techno scientific expertise and EU executive power By so doing this collection produces highly original insights into the development of the EU administrative state as well as into the role of regulatory science in its construction This book will be useful to scholars practitioners and policy makers working on risk regulation and the role of expertise in public decision making

The Constitution of Risk Adrian Vermeule, 2014 The Constitution of Risk is the first book to combine constitutional theory with the theory of risk regulation The book argues that constitutional rulemaking is best understood as a means of managing political risks Constitutional law structures and regulates the risks that arise in and from political life such as an executive coup or military putsch political abuse of ideological or ethnic minorities or corrupt self dealing by officials The book claims that the best way to manage political risks is an approach it calls optimizing constitutionalism in contrast to the worst case thinking that underpins precautionary constitutionalism a mainstay of liberal constitutional theory Drawing on a broad range of disciplines such as decision theory game theory welfare economics political science and psychology this book advocates constitutional rulemaking undertaken in a spirit of welfare maximization and offers a corrective to the pervasive and frequently irrational attitude of distrust of official power that is so prominent in American constitutional history and discourse

Risk Regulation, Science, and Interests in Transatlantic Trade Conflicts D. Hornsby, 2013-10-16 When regions like Canada the US and the EU have disagreed over the legitimacy of risk perceptions they have placed science at the centre of international trade conflict By looking across cases disputed and informally resolved David Hornsby offers to deepen understanding of factors involved in risk based trade conflict

Risk Assessment in the Federal Government National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Institutional Means for Assessment of Risks to Public Health, 1983-02-01 The regulation of potentially hazardous substances has become a controversial issue This volume evaluates past efforts to develop and use risk assessment guidelines reviews the experience of regulatory agencies with different administrative arrangements for risk assessment and evaluates various proposals to modify procedures The book's conclusions and recommendations can be applied across the entire field of environmental health

Science and Politics Brent S. Steel, 2014-04-21 Recent partisan squabbles over science in the news are indicative of a larger tendency for scientific research and practice to get entangled in major ideological divisions in the public arena This politicization of science is deepened by the key role government funding plays in scientific research and development the market leading position of U S based science and technology firms and controversial U S exports such as genetically modified foods or hormone injected livestock This groundbreaking one volume A to Z reference features 120 150 entries that explore the nexus of politics and science both in the United States and in U S interactions with other nations The essays each by experts in their fields examine Health environmental and social cultural issues relating to science and politics Concerns relating to government regulation and its impact on the practice of science Key historical and contemporary events that have shaped our contemporary view of how science and politics intersect
