*Regulation of Alternative Splicing* Philippe Jeanteur, 2002-10-21 The discovery in 1977 that genes are split into exons and introns has done away with the one gene one protein dogma Indeed the removal of introns from the primary RNA transcript is not necessarily straightforward since there may be optional pathways leading to different messenger RNAs and consequently to different proteins Examples of such an alternative splicing mechanism cover all fields of biology Moreover there are plenty of occurrences where deviant splicing can have pathological effects Despite the high number of specific cases of alternative splicing it was not until recently that the generality and extent of this phenomenon was fully appreciated A superficial reading of the preliminary sequence of the human genome published in 2001 led to the surprising and even deceiving to many scientists low number of genes around 32 000 which contrasted with the much higher figure around 150 000 which was previously envisioned Attempts to make a global assessment of the use of alternative splicing are recent and rely essentially on the comparison of genomic mRNA and EST sequences as reviewed by Thanaraj and Stamm in the first chapter of this volume Most recent estimates suggest that 40 60% of human genes might be alternatively spliced as opposed to about 22% for C elegans

splicing Alternative Splicing in the Postgenomic Era Benjamin J. Blencowe, Brenton R. Graveley, 2008-01-23 Yet again Springer has reached the market before everyone This is the first book that is solely dedicated to the topic of alternative splicing The book contains chapters by experts in the field that cover nearly all aspects of this hugely important subject The purpose of the text is to provide a single authoritative source of information on alternative splicing that is accessible to researchers in diverse fields It is suitable for beginners and experts alike **Alternative Splicing and Disease** Philippe Jeanteur, 2006-10-04 Splicing of primary RNA transcript is a quasi systematic step of gene expression in higher organisms This is the first book to highlight the medical implications i e diseases caused by alternative splicing Alternative splicing not only vastly increases protein diversity but also offers numerous opportunities for aberrant splicing events with pathological consequences The book also outlines possible targets for therapy *Eukaryotic mRNA Processing* Adrian Krainer, 1997 The control of gene expression occurs at many levels including transcription RNA maturation and translation Eukaryotic messenger RNA s undergo a variety of complex processing reactions each one essential for gene expression and its proper regulation This volume focuses on the major mRNA maturation reactions primarily those that take place in the nucleus of eukaryotic cells Topics include the assembly of newly synthesized nuclear mRNA transcripts into hnRNP particles and catalytically active spliceosomes the structure and mechanism of action of small nuclear ribonucleoprotein particles and protein factors that catalyze pre mRNA splicing in mammalian cells and in yeast the regulation of gene expression and generation of protein isoform diversity by alternative splicing the mechanisms of 3 end cleavage and polyadenylation the architecture of the cell nucleus in relation to these processes and to the localization of the relevant substrates and factors the diverse mechanisms of RNA processing by ribozymes and their potential relevance for nuclear mRNA processing the mechanisms of spliced leader addition by trans splicing in nematodes and trypanosomes and the process of insertion deletion mRNA editing in kinetoplastid protozoa Leading researchers provide detailed critical reviews of the history experimental approaches major advances current models and future directions for these areas of research New students to mRNA in particular will find it useful and inspiring Tropomyosin Peter Gunning, 2009-09-30 A recent review of one of my grant applications commented on the rediscovery of tropomyosin I was tempted to write back in my rebuttal to the reviewer that I didn't realise it had been lost Uncharacteristic maturity prevailed and I resisted the temptation but I was struck by the underlying observation that research on the structure and function of tropomyosin has been somewhat invisible particularly in terms of the cytoskeleton isoforms So how can it be that one of the two major components of the actin filament has been so thoroughly overlooked I suspect that the answer is disappointingly pedestrian Whereas the biochemistry of the 1980s revealed the potential of tropomyosin isoforms to diversify the function of actin filaments the subsequent disenchantment with isoform biology in general in the 1990s inhibited growth of this field With the development of more sophisticated experimental approaches we are now seeing a growing realisation of the importance of tropomyosin in regulating actin

filaments beyond its pivotal role in muscle contraction The opportunity to edit this book came at a time when we had written several reviews on different aspects of tropomyosin function and I had just finished the background reading for a comprehensive review of tropomyosin biology I realised that the field was simply beyond the capacity of any one person to do the field justice

**Pre-mRNA Processing** Angus I. Lamond, 2014-08-23

In the past fifteen years, we have seen tremendous growth in our understanding of the many post transcriptional processing steps involved in producing functional eukaryotic mRNA from primary gene transcripts. New processing reactions such as splicing and RNA editing have been discovered, and detailed biochemical and genetic studies continue to yield important new insights into the reaction mechanisms and molecular interactions involved. It is now apparent that regulation of RNA processing plays a significant role in the control of gene expression and development. An increased understanding of RNA processing mechanisms has also proved to be of considerable clinical importance in the pathology of inherited disease and viral infection. This volume seeks to review the rapid progress being made in the study of how mRNA precursors are processed into mRNA and to convey the broad scope of the RNA field and its relevance to other areas of cell biology and medicine. Since one of the major themes of RNA processing is the recognition of specific RNA sequences and structures by protein factors, we begin with reviews of RNA protein interactions. In chapter 1, David Lilley presents an overview of RNA structure and illustrates how the structural features of RNA molecules are exploited for specific recognition by protein while in chapter 2, Maurice Swanson discusses the structure and function of the large family of hnRNP proteins that bind to pre mRNA. The next four chapters focus on pre mRNA splicing.
