

An aerial, high-angle photograph of a multi-lane highway. The road is filled with a dense traffic jam of cars, all of which are rendered in a uniform, bright yellow color. The cars are packed closely together, filling all lanes and extending far into the distance. The perspective is from directly above, showing the grid-like pattern of the road lanes and the chaotic arrangement of the vehicles. The overall image has a monochromatic, high-contrast appearance.

## **Regulation Of Motor Vehicle And Traffic Safety:**

*The Regulation of Motor Vehicle and Traffic Safety* Glenn C. Blomquist, 2012-12-06 Decisions twenty years ago during the first generation of modern traffic safety policymaking were easier than today. After all, the mandate for specific mandatory motor vehicle safety standards was derived rather clearly during legislative hearings. Since the initial standards decisions have been based on the more general guidelines of practicality and avoiding unreasonable risks. Now with more difficult decisions pending, the demand for analysis is greater. My purpose in writing this book is to promote second generation policymaking in traffic safety. The dominant theme is that an individual net benefit approach is useful in the design, evaluation, and improvement of traffic safety policy. Hopefully, this book provides some guidance for today's tougher decisions. Evaluative review of modern traffic safety policy, especially automobile safety standards, yields several results. The technological approach, the basis for the 1966 legislation, is shown to produce mistakes. Benefits are overestimated and endangerment of nonoccupants is ignored. The risk homeostatic approach, the devil's idea to some in the safety community, is shown to be a limiting case of the more general individual net benefit approach. Rationality and competency in travelers' safety decisions are reviewed in a broad context. Evidence beyond the realm of behavioral psychology indicates considerable, albeit imperfect, competency in traffic safety decisions. Conventional benefit-cost analysis is critiqued. Existing studies of passive restraints are shown to overestimate net benefits because travelers' responses and costs are ignored.

*Federal Motor Vehicle Safety Standards - Rear Visibility (US National Highway Traffic Safety Administration Regulation) (NHTSA) (2018 Edition)* The Law Library, 2018-11-14 Federal Motor Vehicle Safety Standards Rear Visibility US National Highway Traffic Safety Administration Regulation NHTSA 2018 Edition. The Law Library presents the complete text of the Federal Motor Vehicle Safety Standards Rear Visibility US National Highway Traffic Safety Administration Regulation NHTSA 2018 Edition. Updated as of May 29, 2018. To reduce the risk of devastating backover crashes involving vulnerable populations, including very young children, and to satisfy the mandate of the Cameron Gulbransen Kids Transportation Safety Act of 2007, NHTSA is issuing this final rule to expand the required field of view for all passenger cars, trucks, multipurpose passenger vehicles, buses, and low speed vehicles with a gross vehicle weight of less than 10,000 pounds. The agency anticipates that today's final rule will significantly reduce backover crashes involving children, persons with disabilities, the elderly, and other pedestrians who currently have the highest risk associated with backover crashes. Specifically, today's final rule specifies an area behind the vehicle which must be visible to the driver when the vehicle is placed into reverse and other related performance requirements. The agency anticipates that in the near term, vehicle manufacturers will use rearview video systems and in-vehicle visual displays to meet the requirements of this final rule. Mashaw,David L. Harfst,2013-10-01 Combining superb investigative reporting with incisive analysis Jerry Mashaw and David Harfst provide a compelling account of the attempt to regulate auto safety in America Their penetrating look inside the National Highway Traffic Safety Administration NHTSA spans two decades and reveals the complexities of regulating risk in a free society Hoping to stem the tide of rising automobile deaths and injuries Congress passed the National Traffic and Motor Vehicle Safety Act in 1966 From that point on automakers would build cars under the watchful eyes of the federal regulators at NHTSA Curiously however the agency abandoned its safety mission of setting monitoring and enforcing performance standards in favor of the largely symbolic act of recalling defective autos

Mashaw and Harfst argue that the regulatory shift from rules to recalls was neither a response to a new vision of the public interest nor a result of pressure by the auto industry or other interest groups. Instead the culprit was the legal environment surrounding NHTSA and other regulatory agencies such as the EPA, OSHA and the Consumer Product Safety Commission. The authors show how NHTSA's decisions as well as its organization processes and personnel were reoriented in order to comply with the demands of a legal culture that proved surprisingly resistant to regulatory pressures. This broad gauged view of NHTSA has much to say about political idealism and personal ambition, scientific commitment and professional competition, long range vision and political opportunism. A fascinating illustration of America's ambivalence over whether government is a source of or solution to social ills. The Struggle for Auto Safety offers important lessons about the design and management of effective health and safety regulatory agencies today.

Federal Motor Vehicle Safety Standards Air Brake Systems US National Highway Traffic Safety Administration Regulation NHTSA 2018 Edition. The Law Library presents the complete text of the Federal Motor Vehicle Safety Standards Air Brake Systems US National Highway Traffic Safety Administration Regulation NHTSA 2018 Edition. Updated as of May 29, 2018. This document amends the Federal motor vehicle safety standard on air brake systems to improve the stopping distance performance of truck tractors. The rule requires the vast majority of new heavy truck tractors to achieve a 30 percent reduction in stopping distance compared to currently required levels. For these heavy truck tractors approximately 99 percent of the fleet, the amended standard requires those vehicles to stop in not more than 250 feet when loaded to their gross vehicle weight rating (GVWR) and tested at a speed of 60 miles per hour (mph). For a small number of very heavy severe service tractors the stopping distance requirement will be 310 feet under these same conditions. In addition, this final rule requires that all heavy truck tractors must stop within 235 feet when loaded to their lightly loaded vehicle weight (LLVW).
