Mason, Subhas Chandra Mukhopadhyay, Krishanthi Padmarani Jayasundera, 2014-09-26 This book contains a collection of selected works stemming from the 2013 International Conference on Sensing Technology ICST which was held in Wellington New Zealand The purpose of the book is to distill the highlights of the conference and therefore track the latest developments in sensing technologies The book contents are broad since sensors can be applied in many different areas Therefore the book gives a broad overview of the latest developments in addition to discussing the process through which researchers go through in order to develop sensors or related systems which will become more widespread in the future The book is written for academic and industry professionals working in the field of sensing instrumentation and related fields and is positioned to give a snapshot of the current state of the art in sensing technology particularly from the applied perspective

**IgE Antibodies: Generation and Function** Juan J. Lafaille, Maria A. Curotto de Lafaille, 2015-01-02 This volume examines all facets of the complex biology of Immunoglobulin E IgE antibodies which play an essential role in the pathophysiology of allergic diseases and immunity to parasites It highlights the unique mechanisms involved in the regulation of IgE production at both the molecular and cellular level Furthermore it discusses in detail novel findings on how the affinity specificity and cross reactivity of IgE can fine tune mast cell responses to allergens The book also explores the beneficial roles of IgE antibodies in immunity to helminthes and protection against tumors and how the properties of IgE mediated immunity are employed in the development of IgE therapeutic antibodies All chapters were written by respected experts in

their fields and will appeal to scientists and clinicians alike      Regulation of the IgE Allergic Immune Response by Humoral and Cellular Factors Lars K. Poulsen, 2000      **Molecular and Biological Aspects of the Acute Allergic Reaction** S. Johansson, 2013-03-07 Ladies and Gentlemen dear guests It is my great pleasure and privilege to extend our heartiest welcome to you the participants of this 33rd Nobel symposium To those of you who have not attended a Nobel symposium before I would like just briefly to explain why Nobel's name is linked to this series of symposia Alfred Nobel who died in San Remo in 1896 donated the main part of his fortune to the promotion of international science and culture by establishing annual prizes for outstanding discoveries or contributions within five fields chemistry physics physiology or medicine literature and peace The annual awards should be distributed by five corresponding prize committees out of which four in Stockholm and one in Oslo at that time Sweden and Norway were a united kingdom The Nobel Foundation was instituted in 1900 with the main function to administer economically the Nobel Donation It has done so very successfully The Foundation has even been able to beat the inflation and the prizes have steadily increased during the last 20 years It might interest you to hear that this year's prizes will amount to 681 000 Sw crowns each Due to the favourable financial development and also due to additional donations the Nobel Foundation decided to extend its interests by promoting the arrangements of symposia lectures and other international scientific activities      **Genetic and Environmental Factors in Clinical Allergy** David G. Sullivan, 1989      *Allergy* Elliott Middleton (Jr.), 1988 Abstract This primary textbook and reference source provides information on recent developments in allergy and immunology to clinicians and laboratory scientists Volume I is concerned with basic information on the immunology physiology and pharmacologic aspects of allergic disease and includes data on the basic mechanisms involved in allergic disease and the biology of the cell types involved in

allergic reactions Volume II is the clinical science section and covers the essential clinical diagnostic and therapeutic aspects of allergic disease These articles are extensively referenced

**New Trends in Allergy** J. Ring, G. Burg, 1981-08 From the first to the third of August 1980 an international symposium entitled New Trends in Allergy was held in Munich sponsored by the Ludwig Maximilian University Munich in cooperation with the German Society for Allergy and Immunity Research and the European Society for Dermatological Research The symposium pursued two main goals to bring allergy oriented colleagues from various specialties such as dermatology otorhinolaryngology pediatrics internal medicine immunology and pulmonology together for interdisciplinary contacts and discussions and to attract internationally known experts in an effort to disseminate information on new and fundamental developments in allergology The fact that English has become the lingua franca at congresses for the exchange of ideas in medical specialties led to the decision to hold the symposium in English In spite of the mild handicap this posed for some participants it was also a major factor in the symposium's success This book contains the papers delivered by the invited speakers together with the poster presentations They cover both basic experimental research as well as clinical problems in allergology

**Cancer and IgE** Manuel L. Penichet, Erika Jensen-Jarolim, 2010-03-04 Erika Jensen Jarolim and Manuel L Penichet 1 1 Background Infectious diseases being the major burden in the history of mankind worldwide until the beginning of the 20 century were important triggers in the understanding of immunological mechanisms In contrast to infectious diseases reports of allergies and cancers were less common but increased tremendously within the last century Based on the US mortality data of the National Center for Health Statistics Centers for Disease Control and Prevention 2009 a recent report from the American Cancer Society indicated that the number of cancer deaths increased approximately from 100 000 to 550 000 per year between 1930 and 2006 paralleling the increase of the total population during this period Leading causes of death from cancer are lung and bronchus cancer in men prostate cancer and in women breast cancer 1 2 Normalization to population size shows that the cancer death rate for most malignancies has been generally stable although the mortality rate of certain malignancies such as lung and bronchus cancer has increased over the last 50 years 1 3 In allergy the situation is less clear because for the time period around the turn of the 19 century only imprecise information is available However within the last 30 years the incidences of allergies has doubled not only in industrial countries but in developing countries as well 4

**Molecular Biology and Immunology of Allergens** Dietrich Kraft, Alec Sehon, 1993-03-25 Molecular Biology and Immunology of Allergens explores the characteristics of natural allergens and allergens produced by recombinant DNA techniques The book covers important inhalant allergens such as pollen mites molds and pet dander as well as insect venoms and Chironomid hemoglobin allergens Biological functions of allergens the structural definition of allergens by NMR crystallography and computer modeling and the production of recombinant allergens are discussed Special attention is given to the search for the most effective expression systems in prokaryotic and eukaryotic organisms and the purification of recombinant allergens as fusion and non fusion

proteins Other topics addressed include the production of allergen specific T cell clones the discovery of T cell epitopes by stimulation with overlapping peptides and methods to induce T cell anergy by tolerogenic allergen derived peptides Molecular Biology and Immunology of Allergens will be an excellent reference for all researchers and clinicians in allergology immunology molecular biology allergen extracting and immunotherapy **Allergic Mechanisms and**

**Immunotherapeutic Strategies** Angela M. Roberts,Matthew R. Walker,1997-05-05 There is now considerable evidence that environmental and social changes including increased urbanisation industrialisation air pollution and large scale arable monoculture have combined to produce an increase in the incidence of various allergies It is currently estimated that more than 1 in 10 individuals are afflicted with some form of allergy which although generally not life threatening cause varying levels of discomfort or debilitation IgE mediated hypersensitivities such as seasonal allergic rhinitis hayfever eczema urticaria and asthma consequently represent considerable medical and socio economic problems To date the clinical management of allergy relies largely either on allergen avoidance and or long term use of pharmacological agents e g steroids and antihistamines However a mass of molecular and cellular immunobiological research has accumulated which provides further insights into the precise mechanisms determining IgE production coupled with exciting possibilities for immunotherapeutic intervention Allergic Mechanisms and Immunotherapeutic Strategies has drawn together contributions from leading scientific and medical researchers in this field The topics discussed include the structural basis of the interaction of human IgE with its receptors the role of recombinant DNA methodologies in the analysis of common plant pollen and mite allergens and the modulation of the allergic cascade by T cells and cytokines In addition to summarising the most important discoveries in their respective areas the contributors have illustrated where their findings could be exploited for the development of immunotherapeutic strategies Given that the incidence of allergic disease is increasing it seems likely that such strategies will have an important role in future clinical management of atopic patients *Mechanisms in Allergy* Lawrence Goodfriend,Alec H. Sehon,Robert P. Orange,1973
