leadership play as barriers or facilitators in the development of sustainable energy sources Beginning with an overview of energy related programs and legislation including the National Energy Act of 1978 and the Energy Policy acts of 1992 and 2005 the book discusses the various financial programs and policy mechanisms used by the states Each of the nine essays examines sustainable energy development within a particular state or region The importance of the political climate the impact of free markets and the value of effective leadership with regard to this particular technological development remains a common thread Topics such as the perceived effectiveness of state and federal governmental efforts and prevalent attitudes regarding renewable energy are also discussed Each essay includes an in depth bibliography with many website resources to encourage further research Statistical tables are also provided Instructors considering this book for use in a course may request an examination copy here
