## **Rehabilitation Of Stroke:**

Clinical Pathways in Stroke Rehabilitation Thomas Platz, 2021-01-14 This open access book focuses on practical clinical problems that are frequently encountered in stroke rehabilitation. Consequences of diseases e.g. impairments and activity limitations are addressed in rehabilitation with the overall goal to reduce disability and promote participation. Based on the available best external evidence, clinical pathways are described for stroke rehabilitation, bridging the gap between clinical evidence and clinical decision making. The clinical pathways answer the questions which rehabilitation treatment options are beneficial to overcome specific impairment constellations and activity limitations and are well acceptable to stroke survivors as well as when and in which settings to provide rehabilitation over the course of recovery post stroke. Each chapter starts with a description of the clinical problem encountered. This is followed by a systematic but concise review of the evidence: RCTs, systematic reviews and meta-analyses that is relevant for clinical decision making and comments on assessment, therapy, training, technology, medication and the use of technical aids as appropriate. Based on these summaries, clinical algorithms/pathways are provided and the main clinical decision situations are portrayed. The book is invaluable for all neurorehabilitation team members: clinicians, nurses and therapists in neurology, physical medicine and rehabilitation and related fields. It is a World Federation for NeuroRehabilitation (WFNR) educational initiative bridging the gap between the rapidly expanding clinical research in stroke rehabilitation and clinical practice across societies and continents. It can be used for both clinical decision making for individuals and as well as clinical background knowledge for stroke rehabilitation service development initiatives.

relative to this knowledge base and examples are given of how active learning principles have been successfully applied in specific interventions. The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation. The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach. *Occupational Therapy for Stroke Rehabilitation* Simon B. N. Thompson, Maryanne Morgan, 2013-12-20. This book is both an introductory text to the rehabilitation of stroke for student therapists and a reference text for qualified therapists. The layout of the book reflects these needs with Chapters 1-4 assuming a minimal level of understanding of the material. These chapters provide an introduction to the condition of stroke itself, the problems therapists face in assessing and treating stroke patients, and therapeutic approaches in occupational therapy. Prognosis of stroke is also discussed, which is an issue taken up in later chapters concerned with expert systems. The use of microcomputers in occupational therapy is discussed throughout the book with particular reference to their direct role during therapy. Chapters 5-7 assume a higher level of understanding from the reader, although students will find the material useful as an insight into the work of the modern day therapist. Chapter 5 addresses the work carried out in the area of biofeedback. Chapter 6 introduces the concept and uses of databases, and Chapter 7 discusses the versatility of microcomputers, especially in the provision of expert systems for the prognosis of stroke.

**Collaborative capacity development to complement stroke rehabilitation in Africa** Quinette Louw, 2020-12-31. This scholarly book focuses on stroke in Africa. Stroke is a leading cause of disability among adults of all ages, contributing significantly to health care costs related to long-term implications, particularly if rehabilitation is sub-optimal. Given the burden of stroke in Africa, there is a need for a book that focuses on functioning African stroke survivors and the implications for rehabilitation within the African context. In addition, there is a need to progress with contextualised, person-centred, evidence-based guidance for the rehabilitation of people with stroke in Africa, thereby enabling them to lead socially and economically meaningful lives. The research incorporated in the book used a range of primary and secondary methodological approaches, including scoping reviews, systematic reviews, meta-analyses, descriptive studies, surveys, health economics, and clinical practice guideline methodology, to shed new insights into African-centred issues and strategies to optimise function post-stroke.
