What if we could reimagine copyright? Rebecca Giblin, Kimberlee Weatherall, 2017-01-09 What if we could start with a blank slate and write ourselves a brand new copyright system What if we could design a law from scratch unconstrained by existing treaty obligations business models and questions of political feasibility Would we opt for radical overhaul or would we keep our current fundamentals Which parts of the system would we jettison Which would we keep In short what might a copyright system designed to further the public interest in the current legal and sociological environment actually look like Taking this thought experiment as their starting point the leading international thinkers represented in this collection reconsider copyright s fundamental questions the subject matter that should be protected the ideal scope and duration of those rights and how it should be enforced Tackling the biggest challenges affecting the current law their essays

provocatively explore how the law could better secure to creators the fruits of their labours ensure better outcomes for the world's more marginalised populations and solve orphan works And while the result is a collection of impossible ideas it also tells us much about what copyright could be and what prescriptive treaty obligations currently force us to give up The book shows that reimagined copyright could serve creators and the broader public far better than it currently does and exposes intriguing new directions for achievable reform

A World Without Email Cal Newport, 2021-03-02 A New York Times and Wall Street Journal bestseller From New York Times bestselling author Cal Newport comes a bold vision for liberating workers from the tyranny of the inbox and unleashing a new era of productivity Modern knowledge workers communicate constantly Their days are defined by a relentless barrage of incoming messages and back and forth digital conversations a state of constant anxious chatter in which nobody can disconnect and so nobody has the cognitive bandwidth to perform substantive work There was a time when tools like email felt cutting edge but a thorough review of current evidence reveals that the hyperactive hive mind workflow they helped create has become a productivity disaster reducing profitability and perhaps even slowing overall economic growth Equally worrisome it makes us miserable Humans are simply not wired for constant digital communication We have become so used to an inbox driven workday that it's hard to imagine alternatives But they do exist Drawing on years of investigative reporting author and computer science professor Cal Newport makes the case that our current approach to work is broken then lays out a series of principles and concrete instructions for fixing it In A World without Email he argues for a workplace in which clear processes not haphazard messaging define how tasks are identified assigned and reviewed Each person works on fewer things but does them better and aggressive investment in support reduces the ever increasing burden of administrative tasks Above all else important communication is streamlined and inboxes and chat channels are no longer central to how work unfolds The knowledge sector's evolution beyond the hyperactive hive mind is inevitable The question is not whether a world without email is coming it is but whether you'll be ahead of this trend If you're a CEO seeking a competitive edge an entrepreneur convinced your productivity could be higher or an employee exhausted by your inbox A World Without Email will convince you that the time has come for bold changes and will walk you through exactly how to make them happen
