## **Reinventing Darwin:**

**Reinventing Darwin** Niles Eldredge, 1995-04-17 An insider's provocative account of one of the most contentious debates in science today When Niles Eldredge and Stephen Jay Gould two of the world's leading evolutionary theorists proposed a bold new theory of evolution the theory of punctuated equilibria they stood the standard interpretation of Darwin on its head They also ignited a furious debate about the true nature of evolution On the one side are the geneticists They contend that evolution proceeds slowly but surely driven by competition among organisms to transmit their genes from generation to generation On the other are the paleontologists like Eldredge and Gould who show in the fossil record that in fact evolution proceeds only sporadically Long periods of no change equilibria are punctuated by episodes of rapid evolutionary activity According to the paleontologists this pattern shows that evolution is driven far more by environmental forces than by genetic competition How can the prevailing views on evolution be so different In *Reinventing Darwin* Niles Eldredge offers a spirited account of the dispute and an impressive case for the paleontologists side of the story With the mastery that only a leading contributor to the debate can provide he charts the course of theory from Darwin's day to the present and explores the fundamental mysteries and crucial questions that underlie the current quarrels Is evolution fired by a gentle and persistent motor and fueled by the survival instincts of selfish genes Or does it proceed in fits and starts as the fossil record seems to show What is the role of environmental changes such as habitat destruction and of cataclysmic events like meteor impacts Are most species inherently stable changing only very little until they succumb to extinction Or are species highly adaptable changing all the time Eldredge sorts through the major findings and interpretations and presents a lively introduction to the leading edge of evolutionary theory today *Reinventing Darwin* offers a rare insider's view of the sometimes contentious but always stimulating work of scientific inquiry PRAISE FOR NILES ELDREDGE'S PREVIOUS BOOKS *The Miner's Canary* Unraveling the Mysteries of Extinction *The Miner's Canary* rings with integrity The author takes care to present opposing views Some readers indeed might view Mr Eldredge as a little too self-effacing he is after all one of the world's leading experts in his field *The New York Times Book Review* *Fossils: The Evolution and Extinction of Species* an important and informative book It is also delightfully idiosyncratic This is no scholarly treatise defending academic argument It is an essay for everyone interested in the story of earthly life *The Christian Science Monitor* *Life Pulse* Episodes from the Story of the Fossil Record This is Earth history on a grand scale those who enjoy the works of Stephen Jay Gould will appreciate *Life Pulse* *Publishers Weekly* *Reinventing Darwin* Niles Eldredge, 2001-01-01 This is a first-hand account of the discussions that are going on between biologists of different persuasions On the one side are the Ultra Darwinists mainly theoretical geneticists whose ranks include Richard Dawkins John Maynard Smith and George C Williams They emphasize the supremacy of the gene and of natural selection The other side is a more diverse group the self-styled Naturalists who focus on whole creatures rather than genes and who think in terms of complex interacting ecological processes here we find

Stephen Jay Gould and Niles Eldredge      **Reinventing Darwin** Niles Eldredge, 1996 This is a first hand account of the discussions that are going on between biologists of different persuasions On the one side are the ultradarwinians whose ranks include Richard Dawkins and George C Williams They emphasise the supremacy of the gene and of natural selection The other side is a more diverse group the self styled naturalists who focus on whole creatures rather than genes and who think in terms of complex interacting ecological processes      Darwin's Black Box Michael J. Behe, 1996 Behe argues that the complexity of cellular biochemistry argues against Darwin's gradual evolution      **Life** Davide Tarizzo, 2017-12-15 The word biology was first used to describe the scientific study of life in 1802 and as Davide Tarizzo demonstrates in his reconstruction of the genealogy of the concept of life our understanding of what being alive means is an equally recent invention Focusing on the histories of philosophy science and biopolitics he contends that biological life is a metaphysical concept not a scientific one and that this notion has gradually permeated both European and Anglophone traditions of thought over the past two centuries Building on the work undertaken by Foucault in the 1960s and 70s Tarizzo analyzes the slow transformation of eighteenth century naturalism into a nineteenth century science of life exploring the philosophical landscape that engendered biology and precipitated the work of such foundational figures as Georges Cuvier and Charles Darwin Tarizzo tracks three interrelated themes first that the metaphysics of biological life is an extension of the Kantian concept of human will in the field of philosophy second that biology and philosophy share the same metaphysical assumptions about life originally advanced by F W J Schelling and adopted by Darwin and his intellectual heirs and third that modern biopolitics is dependent on this particularly totalizing view of biological life Circumventing tired debates about the validity of science and the truth of Darwinian evolution this book instead envisions and promotes a profound paradigm shift in philosophical and scientific concepts of biological life      **The Evolutionists** Richard Morris, 2002-05 Introduced in 1859 Charles Darwin's theory of evolution generated hot debate and controversy Today nearly all reputable scientists agree evolution did happen and natural selection was its main driving force Yet a century and a half after Darwin the theory of evolution is still being fought over with a ferocity that has rarely been equaled in the annals of science What are scientists arguing about And why are their exchanges sometimes so bitter In *The Evolutionists* Richard Morris vividly portrays the controversies that rage today in the field of evolutionary biology With a clear and unbiased eye he explores the fundamental questions about the evolutionary process that have provoked such vehement disagreement among some of the world's most prominent scientists including Stephen Jay Gould fellow paleontologist Niles Eldredge geneticist John Maynard Smith and zoologist Richard Dawkins A vibrant account of contemporary evolutionary biology *The Evolutionists* is a fascinating look at how controversy and debate shape the scientific process      Retrieving Darwin's Revolutionary Idea Samuel Grove, 2021-07-12 This study examines the development of Darwin's theory of natural selection The author analyzes how the theory was rejected by the scientific community and argues that his radical thought anticipated Nietzsche's Godless philosophy Marx's class based

economics and Freud's psychological theories of the unconscious

**Darwin's Fishes** Daniel Pauly, 2007-08-27 In Darwin's Fishes Daniel Pauly presents an encyclopaedia of ichthyology ecology and evolution based upon everything that Charles Darwin ever wrote about fish Entries are arranged alphabetically and can be about for example a particular fish taxon an anatomical part a chemical substance a scientist a place or an evolutionary or ecological concept The reader can start wherever they like and are then led by a series of cross references on a fascinating voyage of interconnected entries each indirectly or directly connected with original writings from Darwin himself Along the way the reader is offered interpretation of the historical material put in the context of both Darwin's time and that of contemporary biology and ecology This book is intended for anyone interested in fishes the work of Charles Darwin evolutionary biology and ecology and natural history in general

*From Darwinian Metaphysics Towards Understanding the Evolution of Evolutionary Mechanisms* Momme von Sydow, 2012 Although Charles Darwin predicted that his theory would give zest to metaphysics even he would be astonished at the variety of paths his theory has in fact taken This holds with regard to both gene Darwinism a purified Darwinian approach biologizing the social sciences and process Darwinism found in the disciplines of psychology philosophy of science and economics Although Darwinism is often linked to highly confirmed biological theories some of its interpretations seem to profit from tautological claims as well where scientific reputation cloaks ideological usage This book discusses central tenets of Darwinism historically as well as systematically for example the history of different Darwinian paradigms the units of selection debate and the philosophical problem of induction as basis of metaphysical Darwinism Crucially the book addresses the Darwinian claim that evolution is governed by an immutable and unrelentingly cruel law of natural selection Paradoxically Darwin's theory is a static non evolutionary theory of evolution The current book sketches the historical background and provides suggestions that may help to replace this approach by the idea of an evolution of evolutionary mechanisms see Escher's Drawing Hands on the cover This view even suggests a tendency to overcome the blindness of the knowledge acquisition of primordial Darwinian processes and allows for some freedom from external environments This book first develops a radically Darwinian approach then criticises this approach from within Even Darwinism has a tendency to transcend itself Although the book addresses several empirical issues it does not challenge particular findings Instead it builds on many insights of Darwinism and provides a proposal for interpreting known empirical evidence in a different light It should help pave the way for further developing an understanding of nature that transcends Darwinian metaphysics

Publisher's description

**Stephen Jay Gould** Warren D. Allmon, Patricia Kelley, Robert Ross, 2009 Considered by many during his lifetime as the most well known scientist in the world Stephen Jay Gould left an enormous and influential body of work A Harvard professor of paleontology evolutionary biology and the history of science Gould provided major insights into our understanding of the history of life He helped to reinvigorate paleontology launch macroevolution on a new course and provide a context in which the biological developmental stages of an organism's embryonic growth could be integrated into

an understanding of evolution This book is a set of reflections on the many areas of Gould s intellectual life by the people who knew and understood him best former students and prominent close collaborators Mostly a critical assessment of his legacy the chapters are not technical contributions but rather offer a combination of intellectual bibliography personal memoir and reflection on Gould s diverse scientific achievements The work includes the most complete bibliography of his writings to date and offers a multi dimensional view of Gould s life work not to be found in any other volume The Earth Is Our Home

Nelson Rivera,2016-11-14 This book demonstrates that Mary Midgley s philosophy of evolution points the way towards considering the earth as our only true home since we are products of this planet and its evolving and complex life along with every other organism From the knowledge of ourselves as knowing animals with a biological as well as a cultural history Midgley proposes the elaboration of an evolutionary epistemology that situates us firmly on the earth together with other creatures while at the same time helping us to build knowledge of the world from the complexity of the human experience I like to call this approach by a known theological analogy a view from below that is from the underside of the world from the realms of nature and history Such an approach does not begin by assuming conceptions of design or order in nature a view that we term from above although it does not rule out the possibility of teleological or metaphysical constructions of reality in the long run This down to earth approach I consider essential for any philosophy or theology that wants to take evolutionary theory seriously while committed to a proper and non dismissive assessment of religious views **The Morals of Life**

Daide Tarizzo,2024-08-06 A theory of biopolitical power that updates Foucault illustrating the moral implications of modern evolutionary theory In our day the individual has become a life the singular of the plural noun population From this new understanding of what it means to be human comes a new form of biopolitical power with a new set of moral rules In The Morals of Life moral philosopher Davide Tarizzo presents a theoretical framework for understanding this transformation of the old fashioned government of living beings as Michel Foucault characterized biopolitics into a new government of modular living beings as well as a template for making sense of biopolitical power that operates on the scale of populations rather than individuals Tarizzo traces population thinking the notion of modular optimization and other conceptual keystones of the current biopolitical regime an ethopolitical regime in the author s terms to their origins in twentieth century biological thought more precisely and critically evolutionary theory Neo Darwinism Tarizzo argues should be seen not only as a scientific paradigm but also as a philosophy per se because it is evolutionary theory that today provides an answer to the old philosophical question What is man This new kind of philosophy his book suggests largely determines the way in which people look at themselves and society Not only does it contribute to designing new technologies of power but it also fosters subjection to the new ethopolitical regime **Gaither's Dictionary of Scientific Quotations** Carl C. Gaither,Alma E.

Charles Darwin and the Theory of Evolution by Natural Selection Fred Bortz,2013-12-15 This book explains Charles Darwin s theory of evolution through natural selection while telling how a hypothesis became not merely a theory but the foundation of an entire science      **Francis Galton** Michael Bulmer,2004-12-01 If not for the work of his half cousin Francis Galton Charles Darwin s evolutionary theory might have met a somewhat different fate In particular with no direct evidence of natural selection and no convincing theory of heredity to explain it Darwin needed a mathematical explanation of variability and heredity Galton s work in biometry the application of statistical methods to the biological sciences laid the foundations for precisely that This book offers readers a compelling portrait of Galton as the father of biometry tracing the development of his ideas and his accomplishments and placing them in their scientific context Though Michael Bulmer introduces readers to the curious facts of Galton s life as an explorer as a polymath and member of the Victorian intellectual aristocracy and as a proponent of eugenics his chief concern is with Galton s pioneering studies of heredity in the course of which he invented the statistical tools of regression and correlation Bulmer describes Galton s early ambitions and experiments his investigations of problems of evolutionary importance such as the evolution of gregariousness and the function of sex and his movement from the development of a physiological theory to a purely statistical theory of heredity based on the properties of the normal distribution This work culminating in the law of ancestral heredity also put Galton at the heart of the bitter conflict between the ancestrians and the Mendelians after the rediscovery of Mendelism in 1900 A graceful writer and an expert biometrician Bulmer details the eventual triumph of biometrical methods in the history of quantitative genetics based on Mendelian principles which underpins our understanding of evolution today      **Species of Origins** Karl Giberson,Donald A. Yerxa,2002 In Species of Origins Karl W Giberson and Donald A Yerxa examine America s controversial conversation about creation and evolution While noting that part of the discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo Christian religions Visit our website for sample chapters      **Darwin's Children** Greg Bear,2003-03-04 Greg Bear s Nebula Award winning novel Darwin s Radio painted a chilling portrait of humankind on the threshold of a radical leap in evolution one that would alter our species forever Now Bear continues his provocative tale of the human race confronted by

an uncertain future where survival of the fittest takes on astonishing and controversial new dimensions Eleven years have passed since SHEVA an ancient retrovirus was discovered in human DNA a retrovirus that caused mutations in the human genome and heralded the arrival of a new wave of genetically enhanced humans Now these changed children have reached adolescence and face a world that is outraged about their very existence For these special youths possessed of remarkable advanced traits that mark a major turning point in human development are also ticking time bombs harboring hosts of viruses that could exterminate the old human race Fear and hatred of the virus children have made them a persecuted underclass quarantined by the government in special schools targeted by federally sanctioned bounty hunters and demonized by hysterical segments of the population But pockets of resistance have sprung up among those opposed to treating the children like dangerous diseases and who fear the worst if the government's draconian measures are carried to their extreme Scientists Kaye Lang and Mitch Rafelson are part of this small but determined minority Once at the forefront of the discovery and study of the SHEVA outbreak they now live as virtual exiles in the Virginia suburbs with their daughter Stella a bright inquisitive virus child who is quickly maturing straining to break free of the protective world her parents have built around her and eager to seek out others of her kind But for all their precautions Kaye Mitch and Stella have not slipped below the government's radar The agencies fanatically devoted to segregating and controlling the new breed children monitor their every move watching and waiting for the opportunity to strike the next blow in their escalating war to preserve humankind at any cost

**Imagining the Darwinian Revolution** Ian Hesketh, 2022-06-14 This volume considers the relationship between the development of evolution and its historical representations by focusing on the so called Darwinian Revolution The very idea of the Darwinian Revolution is a historical construct devised to help explain the changing scientific and cultural landscape that was ushered in by Charles Darwin's singular contribution to natural science And yet since at least the 1980s science historians have moved away from traditional great man narratives to focus on the collective role that previously neglected figures have played in formative debates of evolutionary theory Darwin they argue was not the driving force behind the popularization of evolution in the nineteenth century This volume moves the conversation forward by bringing Darwin back into the frame recognizing that while he was not the only important evolutionist his name and image came to signify evolution itself both in the popular imagination as well as in the work and writings of other evolutionists Together contributors explore how the history of evolution has been interpreted deployed and exploited to fashion the science behind our changing understandings of evolution from the nineteenth century to the present
