Relativity Eduard Prugove?ki, 1995 This monograph explains and analyzes the principles of a quantum geometric framework for the unification of general relativity and quantum theory By taking advantage of recent advances in areas like fibre and superfibre bundle theory Krein spaces gauge fields and groups coherent states etc these principles can be consistently incorporated into a framework that can justifiably be said to provide the foundations for a quantum extrapolation of general relativity This volume aims to present this approach in a way which places as much emphasis on fundamental physical ideas as on their precise mathematical implementation References are also made to the ideas of Einstein Bohr Born Dirac

Heisenberg and others in order to set the work presented here in an appropriate historical context *A First Course in General Relativity* Bernard F. Schutz, 1985-01-31 This textbook develops general relativity and its associated mathematics from a minimum of prerequisites leading to a physical understanding of the theory in some depth **The New Universe**

Baker Brownell, 1926 **Ontology of Sex** Carrie Hull, 2006-01-16 Poststructuralism particularly through the writings of Michel Foucault and Judith Butler has achieved remarkable success in challenging our belief in natural sex categories and instincts Here Carrie Hull endorses the progressive ideals of poststructuralism while demonstrating the superiority of a realist account of sex and sexuality Embracing biological and cultural variability Hull nonetheless shows that the sexed body is naturally structured and deeply meaningful Poststructuralist philosophers have argued that biological sex is a continuum rather than a binary and that sex identity and drive are entirely performances of cultural norms rather than expressions of innate qualities Hull draws parallels with Nelson Goodman W V O Quine and B F Skinner to show that these poststructuralist theories are rooted in a nominalist relativist and behaviourist philosophy and develops an alternative framework using arguments from contemporary and critical realism Employing colourful illustrations from biology anthropology and psychology Hull demonstrates the rich potential of realist philosophy and concludes that it is philosophically and scientifically correct on one hand and politically advisable on the other to maintain a distinction albeit attenuated between sex and gender and sexuality and behaviour **Einstein** Ronald Clark, 2011-09-28 First published in 1972 Ronald W Clark s definitive

A Relational Metaphysic H.H. Oliver, 2012-12-06 C S Peirce s indictment that the chief cause of metaphysics backward condition is that its leading professors have been theo Collected Papers 6 3 falls heavily at my door For it logians was out of

reflection upon religious experience and its meaning that the present relational metaphysic was conceived My hope however is that its scope is sufficiently wider than its theological origins to justify its appearance as a work in philosophy Having been nurtured in existential philosophy and having reached some measure of maturity with the wise counsel of Professor Dr Fritz Buri of Basel I came to feel that theology as a modern discipline had reached an impasse owing to its overextended commitments to a subject object paradigm of thought Even those theologians who despaired of these ties seemed unable to find an independent alternative idiom for their ideas A second tension in my thinking resulted from the inordinate neglect by theologians of the natural world Also my natural interest in physical understanding seemed unfulfilled within the narrow confines of theology even of philosophical theology as then practiced As I turned decisively toward the study of modern physics and especially of cosmology a new world seemed to open up to me After extensive study with prominent astronomers and physicists it began to dawn on me that the new physics has devised conceptual paradigms of thought which could be generalized into a metaphysical system of universal interest

Rem B. Edwards, 2016-10-13 This book covers a variety of approaches to the main issues usually covered by philosophy of religion textbooks such as the meaning of religion six ways of relating theology to philosophy naturalism versus supernaturalism and their respective difficulties an explanation and defense of process theism or panentheism God's attributes critiques and defenses of the ontological cosmological and teleological arguments religious experience including pluralistic and monistic mysticism verification after death and the future of reason and religion In dealing with the arguments for the existence of God theism wins Though published some decades ago there is very little in this book that the author would change today **Fields of Force** William Berkson, 2014-05-09 This book describes the picture of reality given by Newton and the development of the later picture of reality given by field theory In telling this story the author explains what problem each scientist faced and how the process of solving them led to new discoveries By this method he gives unique insight into the understanding of Einstein's special theory of relativity as he explains exactly what problems led to the invention of the theory and exactly where Einstein's solution differed from his predecessors A similar analysis is given of the discoveries of Faraday Maxwell Hertz and Lorentz The problem oriented approach of the book originally published in 1974 enables the reader to share in the original creative process and in the excitement of the discoveries It puts physics problems into new perspective and discusses the philosophical implications of the history an illuminating account of a great episode in the history of thought **Cassirer's Transformation: From a Transcendental to a Semiotic Philosophy of Forms** Jean Lassègue, 2020-03-11 This book presents the transformation of Cassirer's transcendental point of view At an early stage Cassirer was confronted with a scientific crisis triggered by the emergence of various forms of objective knowledge such as the plurality of geometric axiom systems and non Euclidean geometry in relativistic physics He finally developed a solution to the problematic unity of objective knowledge by replacing the overarching notion of objectivity with that of forms of objectification This led him to consider the notion of symbolic forms as the driving force in the objectification process This concept would become instrumental in demonstrating that the objective and human sciences are not adversaries they merely differ in their modes of semiotic construction These modes cannot be summarized in a fixed list of symbolic forms but operate transversally at a level where Cassirer distinguishes between three specific operators Expression Evocation and Objectification The last part of the book investigates how the relationships between these three operators stabilize specific symbolic forms Four of these forms are then studied as examples Myth and Ritual Language Scientific Knowledge and Technology
