Relaxation in Complex Systems and Related Topics I.A. Campbell, Carlo Giovannella, 2013-11-11 The aim of the workshop was to bring together specialists in various fields where non exponential relaxation is observed in order to compare models and experimental results and to examine the general physical principles governing this type of behaviour Non exponential relaxation is found in extremely diverse physical systems all of which can be classified as complex The form of the relaxation is generally parametrized using logarithmic algebraic or stretched exponential decay forms The conceptually simplest mechanism for the non exponential decay is a spectrum of relaxation rates due to non interacting units each of which relaxes with a different intrinsic time constant Clear experimental examples can be given where for instance the relaxation of a collection of isolated polymer molecules leads to an overall stretched exponential decay Non exponential relaxation is observed in all strongly interacting complex systems structural glasses spin glasses etc where each elementary unit is in interaction with many other units

Relaxation In Complex Systems And Related Topics I.A. Campbell, *Relaxation and Diffusion in Complex Systems* K.L. Ngai, 2011-03-25 The usefulness of the book to the reader is exposure to many different classes of materials and relaxation phenomena They are tied together by the universal relaxation and diffusion properties they share and a consistent explanation of their origin The readers can apply what they learn to solve their own problems and use it as a stepping stone to make further advances in theoretical understanding of the origin of the universality

Disorder Effects on Relaxational Processes Ranko Richert, Alexander Blumen, 2012-12-06 The field of non crystalline materials has seen the emergence of many challenging problems during its long history In recent years the interest in polymeric and biological disordered matter has stimulated new activities which in turn have enlarged the organic and inorganic glass community The current research fields and recent progress have extended our knowledge of the rich phenomenology of glassy systems where the role of disorder is fundamental for the underlying microscopic dynamics In addition despite the lack of a unified theory many interesting theoretical models have recently evolved The present volume offers the reader a collection of topics representing the current state in the understanding of disorder effects as well as a survey of the basic problems and phenomena involved The task of compiling a book devoted to disordered systems has benefited much from a seminar organized by the W E Heraeus Foundation in Bad Honnef in April 1992 where we had the opportunity to discuss the project with most of the authors Here we wish to thank the Heraeus Foundation for their support and the authors and Springer Verlag especially Dr Marion Hertel for the pleasant cooperation

Electrodynamics of High-temperature Superconductors Alan M. Portis,1993 These lectures are concerned with the application of high temperature superconductors to both passive and active high frequency devices The central issue addressed is the electrodynamics of granular superconductors particularly where grain boundaries either natural or synthetic act as Josephson weak links Grain boundaries are responsible for residual dissipation and for unwanted dependence of the electromagnetic properties on ambient magnetic fields and on elevated power level Properly controlled similar weak links are the key to high sensitivity dc and rf SQUIDS at readily accessible temperatures and to modulators mixers and detectors Such structures may conveniently lead to superconductive electronic devices as well as coherent sources of radiation in the very far infrared Macromolecules 1992 Jaroslav Kahovec,1993-01-01 This book is a collection of the invited special lectures which were delivered at the 34th International Symposium on Macromolecules MACRO 92 held under the auspices of IUPAC Prague Czechoslovakia 13 18 July 1992 The articles included in this volume range from classic topics in polymer science such as polymerization chemistry and structures and properties of macromolecules and polymers to topics in the field of functional polymers such as pharmaceutical polymers polymers with electrically and optically useful
