Release Your Brakes:

Release Your Brakes! James W. Newman, 1995-12-31 *Hitting the Brakes* Ann Johnson, 2009-11-09 In *Hitting the Brakes* Ann Johnson illuminates the complex social historical and cultural dynamics of engineering design in which knowledge communities come together to produce new products and knowledge Using the development of antilock braking systems for passenger cars as a case study Johnson shows that the path to invention is neither linear nor top down but highly complicated and unpredictable Individuals corporations university research centers and government organizations informally coalesce around a design problem that is continually refined and redefined as paths of development are proposed and discarded participants come and go and information circulates within the knowledge community Detours dead ends and failures feed back into the developmental process so that the end design represents the convergence of multiple diverse streams of knowledge The development of antilock braking systems ABS provides an ideal case study for examining the process of engineering design because it presented an array of common difficulties faced by engineers in research and development ABS did not develop predictably Research and development took place in both the public and private sectors and involved individuals working in different disciplines languages institutions and corporations Johnson traces ABS development from its first patents in the 1930s to the successful 1978 market introduction of integrated ABS by Daimler and Bosch She examines how a knowledge community first formed around understanding the phenomenon of skidding before it turned its attention to building instruments to measure model and prevent cars wheels from locking up While corporations accounts of ABS development often present a simple linear story *Hitting the Brakes* describes the full social and cognitive complexity and context of engineering design **Release Your Brakes!** James W.
