Mauritius The Drivers of Growth—Can the Past be Extended? Katsiaryna Svirydzhenka, Mr. Martin Petri, 2014-07-23 Mauritius's economic performance has been called the Mauritian miracle and the success of Africa Romer 1992 Frankel 2010 Stiglitz 2011 despite difficult initial conditions that led a Nobel Prize Winner in economics to predict stagnation Meade 1961 We use growth accounting to analyze the sources of past growth and project potential ranges of growth through 2033 Growth averaged 4.12 percent over the past 20 years Our baseline suggests future growth rates around 3.14 percent but growth could reach 4.5 percent with strong pro active policies including i improving investment and savings rates ii improving the efficiency of social spending and public enterprise reforms iii investment in education and education reforms iii labor market reforms and iv further measures to reduce bottlenecks and increase productivity With policies capable of generating 5 percent growth Mauritius could reach high income status in 2021 4 years earlier than under the baseline

Population — Development — Environment J. Baguant, Wolfgang Lutz, C. Prinz, F.L. Toth, A.B. Wils, 2013-06-29 Because the number of options is often limited small island states tend to find it uncommonly difficult to strike a balance between population environment and development Relatively high population density and small land areas without much in the way of natural resources do not provide the best of circumstances for improving the living conditions of the population especially a fast growing one The result is often stunted economic development and environmental stress both on land and offshore The developments in the island state of Mauritius over the past 30 years however can serve as an inspiration and illustration of how extremely adverse conditions can be overcome In the early 1960s Mauritius was trying to cope with rapid population growth extreme poverty and grim economic prospects Population density was 324 inhabitants per km total fertility was 5.7 and GNP per capita was less than 200 In 1990 the situation in Mauritius was radically different Although population density had increased to 527 inhabitants per km total fertility had dropped to 2.0 and GNP per capita had increased to 2,310 Economic stagnation had been replaced by steady growth and full employment and environmental problems were being addressed as issues of high priority

Globalisation and Labour Market Adjustment D. Greenaway, R. Upward, P.
