Environmental Law for Engineers and Geoscientists Robert Lee Aston,2002-02-14 Today s engineering and geoscience student needs to know more than how to design a new or remedial project or facility Questions of law and ambiguities of terms often occur in contracts for mining landfills site reclamation waste depositories clean up sites land leases operating agreements joint ventures and other projects Work place situations arise where environmental compliance methods are challenged by enforcement agencies Although the statutes rules and regulations may seem to be worded clearly and specifically there are often questions in application and sometimes varied interpretations *Environmental Law for Engineers and Geoscientists* introduces simplified American jurisprudence focusing on the legal system its courts terms phrases administrative law and regulation by the agencies that administer environmental law The book comprehensively covers the big five environmental statutes NEPA CAA CWA CERCLA and RCRA With the basic law chapter as a foundation the book

covers the practical applications of environmental law for geo engineers It concludes with a chapter on the growing area of expert witnessing and admissible evidence in environmental litigation an area of law where success or failure increasingly depends on the exacting preparation and presentation of expert scientific evidence Written by a professional mining and geological engineer and a practicing attorney Environmental Law for Engineers and Geoscientists prepares students for the numerous environmental regulatory encounters they can expect when dealing with various statutes laws regulations and agency rules that govern affect and apply to environmental engineering projects It provides a working knowledge of how to judge whether or not a project is in compliance with regulations and how to ensure that it is

Electromagnetic Boundary Problems Edward F. Kuester, David C. Chang, 2015-09-15 Electromagnetic Boundary Problems introduces the formulation and solution of Maxwell's equations describing electromagnetism Based on a one semester graduate level course taught by the authors the text covers material parameters equivalence principles field and source stream potentials and uniqueness as well as Provides analytical solutions of waves in regions with planar cylindrical spherical and wedge boundaries Explores the formulation of integral equations and their analytical solutions in some simple cases Discusses approximation techniques for problems without exact analytical solutions Presents a general proof that no classical electromagnetic field can travel faster than the speed of light Features end of chapter problems that increase comprehension of key concepts and fuel additional research Electromagnetic Boundary Problems uses generalized functions consistently to treat problems that would otherwise be more difficult such as jump conditions motion of wavefronts and reflection from a moving conductor The book offers valuable insight into how and why various formulation and solution methods do and do not work
