Maximum Blink 18:

Basic and applied research on deception and its detection Wolfgang Ambach, Matthias Gamer, 2014-08-07

Deception is a ubiquitous phenomenon in social interactions and has attracted a significant amount of research during the last decades. The majority of studies in this field focused on how deception modulates behavioral, autonomic and brain responses and whether these changes can be used to validly identify lies. Especially the latter question, which historically gave rise to the development of psychophysiological lie detection techniques, has been driving research on deception and its detection until today. The detection of deception and concealed information in forensic examinations currently constitutes one of the most frequent applications of psychophysiological methods in the field. With the increasing use of such methods, the techniques for detecting deception have been controversially discussed in the scientific community. It has been proposed to shift from the original idea of detecting deception *per se* to a more indirect approach that allows for determining whether a suspect has specific knowledge of crime-related details. This so-called Concealed Information Test is strongly linked to basic psychological concepts concerning memory, attention, orienting and response monitoring. Although research in this field has intensified with the advancement of neuroimaging techniques such as PET and fMRI in the last decade, basic questions on the psychological mechanisms underlying modulatory effects of deception and information concealment on behavioral, autonomic and brain responses are still poorly understood. This Research Topic brings together contributions from researchers in experimental psychology, psychophysiology and neuroscience focusing on the understanding of the broad concept of deception, including the detection of concealed information with respect to basic research questions as well as applied issues. This Research Topic is mainly composed of original research articles, but reviews and papers elaborating on novel methodological approaches have also been included. Experimental methods include, but are not limited to, behavioral, autonomic, electroencephalographic or brain imaging techniques that allow for revealing relevant facets of deception on a multimodal level. While this Research Topic primarily includes laboratory work, relevant issues for the field use of such methods are also discussed.

Eye Tracking Kenneth Holmqvist, Marcus Nyström, Richard Andersson, Richard Dewhurst, Halszka Jarodzka, Joost van de Weijer, 2011-09-22 We make 3 5 eye movements per second and these movements are crucial in helping us deal with the vast amounts of information we encounter in our everyday lives In recent years thanks to the development of eye tracking technology there has been a growing interest in monitoring and measuring these movements with a view to understanding how we attend to and process the visual information we encounter Eye tracking as a research tool is now more accessible than ever and is growing in popularity amongst researchers from a whole host of different disciplines Usability analysts sports scientists cognitive psychologists reading researchers psycholinguists neurophysiologists electrical engineers and others all have a vested interest in eye tracking for different reasons The ability to record eye movements has helped advance our science and led to technological innovations However the growth of eye tracking in recent years has also presented a variety of challenges in particular the issue of how to design an eye tracking experiment and how to analyse the data This book is a much needed comprehensive handbook of eye tracking methodology It describes how to evaluate and acquire an eye tracker how to plan and design an eye tracking study and how to record and

analyse eye movement data Besides technical details and theory the heart of this book revolves around practicality how raw data samples are converted into fixations and saccades using event detection algorithms how the different representations of eye movement data are calculated using AOIs heat maps and scanpaths and how all the measures of eye movements relate to these processes Part I presents the technology and skills needed to perform high quality research with eye trackers Part II covers the predominant methods applied to the data which eye trackers record These include the parsing of raw sample data into oculomotor events and how to calculate other representations of eye movements such as heat maps and transition matrices Part III gives a comprehensive outline of the measures which can be calculated using the events and representations described in Part II This is a taxonomy of the measures available to eye tracking researchers sorted by type of movement of the eyes and type of analysis For anyone in the sciences considering conducting research involving eye tracking this book will be an essential reference work

Weather Bureau,1952 **Pediatric Formulations** Daniel Bar-Shalom,Klaus Rose,2014-01-30 Until the 1990s it was generally accepted that medicines were first developed for adults and their use in children was investigated later if at all One of the main tasks of hospital pharmacies was the manufacturing of child appropriate formulations in a more or less makeshift way The first change came in 1997 with U S legislation that rewarded manufacturers to do voluntary pediatric research Ten years later the European Union passed legislation that

required manufacturers to discuss all pediatric aspects including formulations with the regulatory authorities as a condition of starting the registration procedure In consequence manufacturers must now cover all age groups including the youngest ones So far pediatric formulations were more a focus for academic researchers Through the changed regulatory environment there is now a sudden high commercial demand for age appropriate formulations This book begins by highlighting the anatomical physiological and developmental differences between adults and children of different ages It goes on to review the existing technologies and attempts to draw a roadmap to better innovative formulations in particular for oral administration The regulatory clinical ethical and pharmaceutical framework is also addressed Lacrimal Gland, Tear Film, and Dry Eye Syndromes 3 David A. Britt Bromberg, 2013-11-11 During the past several decades a significant international research effort has been directed towards understanding the composition and regulation of the precorneal tear film This effort has been motivated by the recognition that the tear film plays a critical role in maintaining corneal and conjunctival integrity protecting against microbial challenge and preserving visual acuity In addition research has been stimulated by the knowledge that alteration or deficiency of the tear film which occurs in numerous individuals throughout the world may lead to desiccation of the ocular surface ulceration and perforation of the cornea an increased incidence of infectious disease and potentially pronounced visual disability and blindness Water Resources Data for Pennsylvania , 1968 **New Approaches to Gear Design and Production** Veniamin Goldfarb, Evgenii Trubachev, Natalya Barmina, 2020-01-25 This is the third book in a series devoted to gear design and production Comprising papers by scientists and gear experts from around the globe it covers recent developments in practically all spheres of mechanical engineering related to gears and transmissions It describes advanced approaches to research design testing and production of various kinds of gears for a vast range of applications with a particular focus on advanced computer aided approaches for gear analysis simulation and design the application of new materials and tribological issues **Cumulated Index Medicus** , 1998
