Limb Salvage F. Langlais,B. Tomeno,2012-12-06 An international group of researchers has met every 2 years since 1981 to examine the progress made in limb salvage techniques and the perspectives of this field of surgery In 1989 the Fifth International Symposium On Limb Salvage ISOLS was held in Saint Malo and was attended by more than 300 participants from 34 different countries The 105 papers presented grouped under eleven main headings have been included in this book Limb salvage has indeed progressed

in the years since the first symposium Initially it essentially concerned tumours and the main aim was to salvage the diseased limb through non mutilating surgery without jeopardizing the patient's prospects of survival Now with a confirmed high rate of 5 year disease free survival new goals can be set improvement of the functional results and of the survival of our reconstructions How can this be achieved By favouring muscle reattachment on the prosthesis for instance through the use of a bone allograft sleeved composite prosthesis By improving the survival of the arthroplasty through the development of a more biological fixation of its stems By limiting the side effects of the necessary adjuvant treatments on the function of the allograft as well as on the fixation of the prosthesis In addition limb salvage procedures now concern not only primary tumours and metastases which must be treated using the same osteosynthetic and prosthetic techniques but also reconstructive orthopaedic surgery as a whole
