using them Why do many DBAs continue to ignore them in favour of tried and trusted tools such as sp_who2 DBCC OPENTRAN and so on or make do with the ready made reports built into SSMS Why do even those that do use the DMVs speak wistfully about good old sysprocesses There seem to be two main factors at work Firstly some DBAs are simply unaware of the depth and breadth of the information that is available from the DMVs or how it might help them troubleshoot common issues This book investigates all of the DMVs that are most frequently useful to the DBA in investigating query execution index usage session and transaction activity disk IO and how SQL Server is using or abusing the operating system Secondly the DMVs have a reputation of being difficult to use In the process of exposing as much useful data as possible sysprocesses has been de normalized and many new views and columns have been added This fact coupled with the initially baffling choices of what columns will be exposed where has lead to some DBAs to liken querying DMVs to collecting mystic spells In fact however once you start to write your own scripts you ll see the same tricks and similar join patterns being used time and again As such a relatively small core set of scripts can be readily adapted to suit any requirement This book is here to de mystify the process of collecting the information you need to troubleshoot SQL Server problems It will highlight the core techniques and patterns that you need to master and will provide a core set of scripts that you can use and adapt for your own systems including how to Root out the queries that are causing memory or CPU pressure on your system Investigate caching and query plan reuse Identify index usage patterns Track fragmentation in clustered indexes and heaps Get full details on blocking and blocked transactions including the exact commands being executed and by whom Find out where SQL Server is spending time waiting for resources to be released before proceeding Monitor usage and growth of tempdb The DMVs don t make existing built in performance tools obsolete On the contrary they complement these tools and offer a flexibility richness and granularity that are simply not available elsewhere Furthermore you don t need to master a new GUI or a new language in order to use them it s all done in a language all DBAs know and mostly love T SQL
