Morphodynamics Adolf Seilacher,Alan D. Gishlick,2014-11-05 Morphodynamics is defined as the unique interaction among environment functional morphology developmental constraints phylogeny and time all of which shape the evolution of life These fabrication patterns and similarities owe their regularity not to a detailed genetic program but to extrinsic factors which may be mechanical chemical or biological in nature These self organizing mechanisms are the focus of Morphodynamics Illustrated by numerous examples

from across the biological spectrum this book embodies the foundation of noted paleontologist Adolf Seilacher's thinking on the study of morphodynamics. It represents his unique approach of presenting paleontology from an ecological and constructional perspective rather than a purely taxonomic one. The hallmark of Seilacher's storied career has been a constructional and functional focus. He begins by discussing the basic principles of pattern formation, ecology and evolution as well as the factors that override those processes. Next, he examines how morphodynamic principles are implemented in various invertebrates including single-celled protists, Ediacarans, sponges, coelenterates, shelled organisms, worms, arthropods and echinoderms. The final chapter explores how morphogenetic principles may apply to clonal colonial organisms. Summarizing seventy years of research into the interactions of form, function and evolution, the book is copiously illustrated with the author's own distinctive drawings and an abundance of photos. It provides a framework for readers to pose their own questions and sharpen their interpretive skills on this fascinating topic.

### **Reference and Information**

**Services** Richard E. Bopp, Linda C. Smith, 2011-05-23 Reflecting the dramatic changes shaped by rapidly developing technologies over the past six years, this new fourth edition of *Reference and Information Services* takes the introduction to reference sources and services significantly beyond the content of the first three editions. In Part I, Concepts and Processes, chapters have been revised and updated to reflect new ideas and methods in the provision of reference service in an era when many users have access to the Web. In Part II, Information Sources and Their Use, discussion of each source type has been updated to encompass key resources in print and on the Web where an increasing number of freely available sources join those purchased or licensed by libraries. A number of new authors are contributors to this new edition, bringing to their chapters their experience as teachers of reference and as practitioners in different types of libraries. Discussions of services in Part I integrate digital reference as appropriate to each topic, such as how to conduct a reference interview online using instant messaging. Boxes interspersed in the text are used to present scenarios for discussion to highlight key concepts or to present excerpts from important documents. Discussions of sources in Part II place more emphasis on designing effective search strategies using both print and digital resources. The chapter on selection and evaluation of sources addresses the changing nature of reference collections and how to evaluate new types of sources. Each chapter concludes with an updated list of additional readings to guide further study. A new companion website will provide links to Web-accessible readings and resources as well as additional scenarios for discussion and example search strategies to supplement those presented in the text.
