Quaternary Plant Ecology British Ecological Society, 1973 Quaternary Populationen und ihre Dynamik kologie
Quaternary Ecology, Evolution, and Biogeography Valenti Rull, 2020-03-05 Quaternary Ecology Evolution and Biogeography offers an introduction to the study of the ecological and evolutionary processes that have shaped our present biosphere under the influence of glacial interglacial cycles Written by an ecologist with paleoecological expertise this book reviews the climatic changes that have occurred during the last 2.6 million years along with the responses of organisms and ecosystems It offers an understanding of the evolutionary origin of extant biodiversity its biogeographical patterns and the composition of modern ecological communities In addition it explores human evolution and the influence of our activities on the biosphere especially in the last millennia This book offers the latest information on how studying the past can contribute to our understanding of present climate issues for a better future and is an ideal resource for researchers and students in the natural sciences Includes the latest developments in genomics and their relevance within Quaternary evolution Offers a holistic view of the origin of biodiversity patterns and community assembly Discusses the role of climate on human evolution and the ecological consequences for natural systems *Quaternary Ecology*, 2012-11-26 **Quaternary Plant Ecology** British Ecological Society. Symposium (, 1973 **Vegetation history** B. Huntley, T. Webb III, 2012-12-06 The analysis of vegetation history is one of the prime objectives for vegetation scientists In order to understand the recent composition of local floras and plant communities a second knowledge of species composition during recent millennia is essential With the present concern over climate changes due to human activities an understanding of past vegetation distribution becomes even more important since the correlation between climate and vegetation can often be used to predict possible impacts to crops and forests I was very fortunate to receive the help of Drs Webb and Huntley to compile this volume on vegetation history They have collated an impressive set of papers which together give an account of the vegetation history of most of the continents during the late Tertiary and Quaternary periods There are however gaps in the coverage achieved most notably Africa and Asia apart from Japan The information in this book will nonetheless certainly be used widely by vegetation scientists for the regions covered in the book and much of it has relevance to the areas not explicitly described The authors of the individual chapters have done their best to cover recent topics of interest as well as established facts It is intended that a separate volume will be produced in the near future covering the vegetation history of Africa and Asia I thank the editors of It fits well into the this volume for their commendable achievement **Plant Life of the Quaternary Cold Stages** R. G. West, 2000-04-13 CD ROM contains Electronic version of the cold stage flora **Quaternary Vegetation Dynamics** William D. Gosling, Anne-Marie Lézine, Louis Scott, 2021-08-04 This book presents the state of the art of pollen data in sub-Saharan Africa Pollen grains are powerful tools for the study of environments because their shape and ornamentation differ from one species to another The book deals with the study of past environments from Africa south of the

Mediterranean region **Vegetation-Climate Interaction** Jonathan Adams, 2009-11-27 This book offers a readable and accessible account of the way in which the world's plant life partly controls its own environment Starting from the broad patterns in vegetation which have classically been seen as a passive response to climate the authors build up from the local scale with microclimates produced by plants to the regional and global scale The influence of plants both on land and in the ocean in making clouds haze and rain are considered along with plant effects on the composition of greenhouse gases in the earth's atmosphere Broad global feedbacks that either stabilize or destabilize the earth's environment will be explored in the context of environmental change in the recent geological past and in the near future Common contentions and

misconceptions about the role of vegetation or forest removal in the spread of deserts will also be considered **Plant Ecology of Death Valley, California** Charles Butler Hunt, Lawrence Wood Durrell, Laurence Wood Durrell, 1966 A description of the composition and environment of plants in Death Valley The plants were mapped in connection with the general geologic mapping their distribution is closely related to the distribution of the geologic formations The geology is described more fully in two companion reports *Quaternary Plant Ecology* British Ecological Society. Symposium, 1973

Modern Ecology Gerd Esser, Dieter Overdieck, 1991 Hardbound This book is based on many case studies in the broad area of ecological studies and is derived from numerous sources originating from several countries The book begins with discussions on morphology stand structure competition mass and water balance at the stand level of vegetation as well as mineral cycles A section deals with disturbances and management of agricultural as well as semi natural systems With the input of several authors zoologists botanists and geographers detail is given to the eutrophication and pollution in terrestrial ecosystems Included as well are discussions on the carbon cycle as it relates to current climate change and modern methods of remote sensing and geographical modelling The book concludes with a chapter on urban and landscape ecology The main feature of this book is that it includes most methods and tasks of modern ecology using case studies and incorporating all levels of integration from sing

Ecology and Biogeography of Pinus David M. Richardson, 2000-07-31 A comprehensive review essential for all involved in the management of natural and planted pine forests

Open Ecosystems William J. Bond, 2019-08-21 This book explores the geography, ecology, and antiquity of open ecosystems which include grasslands, savannas, and shrublands. They occur in climates that can support closed forest ecosystems and often form mosaics with forest patches. With the aid of remote sensing, it is now clear that open ecosystems are a global phenomenon and occur over vast areas in climates that could also support forests. This book goes beyond regional narratives and seeks general explanations for their existence. It develops the theme of open ecosystems as being widespread and ancient, with a distinct biota from that of closed forests. It examines hypotheses for their maintenance in climate zones favouring the development of forests, including fire, vertebrate herbivory, and soils hostile for tree growth. *Open Ecosystems: ecology and evolution beyond the forest edge* provides an accessible introduction for graduate students and researchers of open, non-forested ecosystem ecology in departments of ecology, geography, and environmental science. It will also be of relevance and use to professional ecologists, biogeographers, and global change biologists requiring a concise, authoritative overview of the topic.

Bryophyte Ecology and Climate Change Zoltán Tuba, Nancy G. Slack, Lloyd R. Stark, 2011-01-06 Bryophytes, especially mosses, represent a largely untapped resource for monitoring and indicating effects of climate change on the living environment. They are tied very closely to the external environment and have been likened to canaries in the coal mine. *Bryophyte Ecology and Climate Change* is the first book to bring together a diverse array of research in bryophyte ecology, including physiology, desiccation tolerance, photosynthesis, temperature, and UV responses, under the umbrella of climate change. It covers a great variety of ecosystems in which bryophytes are important, including aquatic, desert, tropical, boreal, alpine, Antarctic, and Sphagnum-dominated wetlands, and considers the effects of climate change on the distribution of common and rare species, as well as the computer modeling of future changes. This book should be of particular value to individuals, libraries, and research institutions interested in global climate change.

Methods in Paleoecology Darin A. Croft, Denise F. Su, Scott W. Simpson, 2018-10-27 This volume focuses on the reconstruction of past ecosystems and provides a comprehensive review of current techniques and their application in exemplar studies. The 18 chapters address a wide variety of topics that span vertebrate paleobiology and paleoecology, body mass, postcranial functional morphology, evolutionary dental morphology, microwear and mesowear, ecomorphology, mammal community structure analysis, contextual paleoenvironmental studies, paleosols, and sedimentology, ichnofossils, pollen, phytoliths, plant macrofossils, and special

techniques bone microstructure biomineral isotopes inorganic isotopes ^3D morphometrics and ecometric modeling A final chapter discusses how to integrate results of these studies with taphonomic data in order to more accurately characterize an ancient ecosystem Current investigators advanced undergraduates and graduate students interested in the field of paleoecology will find this book immensely useful The length and structure of the volume also makes it suitable for teaching a college level course on reconstructing Cenozoic ecosystems *Alpine Plant Life* Christian Körner, 2003-07-14 Climate soil treeline carbon stress growth reproduction global change water **Pleistocene Palaeoecology of Central Norfolk** R. G. West, 1991-07-26 This book describes and discusses the great environmental changes revealed by a study of a small area in central Norfolk **Forest Vegetation of Northeast Asia** Jirí Kolbek, Miroslav Srdteck, Elgene E. O. Box, 2003-08-31 When two of us Jirí Kolbek Miroslav Srdteck were working in North Korea on the Czech Slovak field expeditions of the early 1990s we did not think initially of comparing our results with the vegetation of surrounding areas or of writing a book Our efforts mainly involved observing and documenting the vegetation as completely as possible and initial recognition of vegetation units At first we focused on the most obvious vegetation types but eventually also any important types that we could discern Later we focused more on forests since almost all of northeastern Asia has forest potential and forests still do form the landscape matrix in most areas First we studied suburban woods and forests most of which are strongly affected by human activities Later though we also had chances to visit and study lovely mountain regions including Myohyang san Kumgang san Su jang san and the high especially beautiful Changbai shan on the border between North Korea and China The Changbai shan is the highest mountain system in the Korean Peninsula including the highest peak Paektu san We gradually changed our goal from an evaluation of forest data from North Korea to comparison with available field data and literature sources from comparable surrounding areas These include South Korea the Russian Far East northeastern China Manchuria and northern Japan including the Kuril Islands Finally we decided to prepare a preliminary survey of the forest vegetation of the Russian Far East and eventually of all of northeastern Asia which would be published in English Quaternary Ecology Hazel R. Delcourt, P. Delcourt, 1991-07-31 The increasing interest during recent years in vegetation history long term climatic changes and the development of biotic communities has resulted in a growth of the literature in this field and has provided an incentive for scientists to use palaeo ecology concepts to clarify contemporary ecological issues Quaternary ecology offers the perspective of time in using natural experiments of the past to evaluate the responses of population communities and ecosystems to climatic and environmental changes on a time scale extending back over the past two million years of the quaternary period Examples from the palaeo ecological literature demonstrate how quaternary ecology interfaces with other branches of ecology including plant demography ecological genetics limnology and landscape ecology
