Queries Theories:

Bisexual Politics Naomi S Tucker, 2014-06-11 This anthology presents a vivid collection of essays that explore the history strategies philosophy and diversity of bisexual politics and theory in the United States The 33 contributors develop a multifaceted approach to defining bisexual politics Through these voices the book seeks to understand the contexts in which the bisexual movement has evolved The authors analyze different organizing strategies formulate new bisexual political theory provide a vision of future directions for redefining sexuality and gender and educate activists and allies about current issues pertinent to the bisexual community This book is the first of its kind To date it is the only book that documents and analyzes bisexual politics and theory While existing literature on bisexuality has focused on identity coming out and forming communities Bisexual Politics takes the vital next step into bisexual political theory and activism The many subjects and subthemes addressed in Bisexual Politics appeal to a multitude of readers from activists to academics from friends and family of bisexuals to those who have struggled with bisexuality It is a sourcebook for those seeking to locate bisexuality in the schema of other social justice movements It is a tool to build alliances with other progressive groups and build coalitions with both lesbian gay and heterosexual communities It is a primer for anyone interested in bisexual activism and theory

Bounded Queries in Recursion Theory William S. Levine, Georgia Martin, 1998-12-23 One of the major concerns of theoretical computer science is the classification of problems in terms of how hard they are The natural measure of difficulty of a function is the amount of time needed to compute it as a function of the length of the input Other resources such as space have also been considered In recursion theory by contrast a function is considered to be easy to compute if there exists some algorithm that computes it We wish to classify functions that are hard i e not computable in a quantitative way We cannot use time or space since the functions are not even computable We cannot use Turing degree since this notion is not quantitative Hence we need a new notion of complexity much like time or space that is quantitative and yet in some way captures the level of difficulty such as the Turing degree of a function Computer Science -- Theory and Applications Lev
