Questions Of Broadcasting:

Questions of Broadcasting Stuart Hood, Garret O'Leary, 1990 After Broadcast News Bruce A. Williams, Michael X. Delli Carpini, 2011-09-26 The new media environment has challenged the role of professional journalists as the primary source of politically relevant information After Broadcast News puts this challenge into historical context arguing that it is the latest of several critical moments driven by economic political cultural and technological changes in which the relationship among citizens political elites and the media has been contested Out of these past moments distinct media regimes eventually emerged each with its own seemingly natural rules and norms and each the result of political struggle with clear winners and losers The media regime in place for the latter half of the twentieth century has been dismantled but a new regime has yet to emerge Assuring this regime is a democratic one requires serious consideration of what was most beneficial and most problematic about past regimes and what is potentially most beneficial and most problematic about today's new information environment **Public Broadcasting** United States. Fault-Tolerant Search Algorithms Ferdinando Cicalese,2013-11-29 Why a book on fault tolerant search algorithms Searching is one of the fundamental problems in computer science Time and again algorithmic and combinatorial issues originally studied in the context of search find application in the most diverse areas of computer science and discrete mathematics On the other hand fault tolerance is a necessary ingredient of computing Due to their inherent complexity information systems are naturally prone to errors which may appear at any level as imprecisions in the data bugs in the software or transient or permanent hardware failures This book provides a concise rigorous and up to date account of different approaches to fault tolerance in the context of algorithmic search theory Thanks to their basic structure search problems offer insights into how fault tolerant techniques may be applied in various scenarios In the first part of the book a paradigmatic model for fault tolerant search is presented the Ulam R nyi problem Following a didactic approach the author takes the reader on a tour of Ulam R nyi problem variants of increasing complexity In the context of this basic model fundamental combinatorial and algorithmic issues in the design of fault tolerant search procedures are discussed The

algorithmic efficiency achievable is analyzed with respect to the statistical nature of the error sources and the amount of information on which the search algorithm bases its decisions In the second part of the book more general models of faults and fault tolerance are considered Special attention is given to the application of fault tolerant search procedures to specific problems in distributed computing bioinformatics and computational learning This book will be of special value to researchers from the areas of combinatorial search and fault tolerant computation but also to researchers in learning and coding theory databases and artificial intelligence Only basic training in discrete mathematics is assumed Parts of the book can be used as the basis for specialized graduate courses on combinatorial search or as supporting material for a graduate or undergraduate course on error correcting codes **Federal Register** ,1985-08-26 **Broadcast Announcing Worktext**
