Mind and Cosmos Thomas Nagel, 2012-11-22 The modern materialist approach to life has conspicuously failed to explain such central mind-related features of our world as consciousness intentionality meaning and value This failure to account for something so integral to nature as mind argues philosopher Thomas Nagel is a major problem threatening to unravel the entire naturalistic world picture extending to biology evolutionary theory and cosmology Since minds are features of biological systems that have developed through evolution the standard materialist version of evolutionary biology is fundamentally incomplete And the cosmological history that led to the origin of life and the coming into existence of the conditions for evolution cannot be a merely materialist history either An adequate conception of nature would have to explain the appearance in the universe of materially irreducible conscious minds as such Nagel's skepticism is not based on religious belief or on a belief in any definite alternative In Mind and Cosmos he does suggest that if the materialist account is wrong then principles of a different kind may also be at work in the history of nature principles of the growth of order that are in their logical form teleological rather than mechanistic In spite of the great achievements of the physical sciences reductive materialism is a world view ripe for displacement Nagel shows that to recognize its limits is the first step in looking for alternatives or at least in being open to their possibility

Conscious Mind, Resonant Brain Stephen Grossberg, 2021 How does your mind work How does your brain give rise to your mind These are questions that all of us have wondered about at some point in our lives if only because everything that we know is experienced in our minds They are also very hard questions to answer After all how can a mind understand itself How can you understand something as complex as the tool that is being used to understand it This book provides an introductory and self-contained description of some of the exciting answers to these questions that modern theories of mind and brain have recently proposed Stephen Grossberg is broadly acknowledged to be the most important pioneer and current research leader who has for the past 50 years modelled how brains give rise to minds notably how neural circuits in multiple brain regions interact together to generate psychological functions This research has led to a unified understanding of how where and why our brains can consciously see hear feel and know about the world and

effectively plan and act within it The work embodies revolutionary Principia of Mind that clarify how autonomous adaptive intelligence is achieved It provides mechanistic explanations of multiple mental disorders including symptoms of Alzheimer's disease autism amnesia and sleep disorders biological bases of morality and religion including why our brains are biased towards the good so that values are not purely relative perplexing aspects of the human condition including why many decisions are irrational and self defeating despite evolution's selection of adaptive behaviors and solutions to large scale problems in machine learning technology and Artificial Intelligence that provide a blueprint for autonomously intelligent algorithms and robots Because brains embody a universal developmental code unifying insights also emerge about shared laws that are found in all living cellular tissues from the most primitive to the most advanced notably how the laws governing networks of interacting cells support developmental and learning processes in all species The fundamental brain design principles of complementarity uncertainty and resonance that Grossberg has discovered also reflect laws of the physical world with which our brains ceaselessly interact and which enable our brains to incrementally learn to understand those laws thereby enabling humans to understand the world scientifically Accessibly written and lavishly illustrated Conscious Mind Resonant Brain is the magnum opus of one of the most influential scientists of the past 50 years and will appeal to a broad readership across the sciences and humanities
