Liu,2017-05-15 While lecturing in recent months at a number of prominent institutions I asked some of the residents and fellows whether and how they might benefit from a book on corneal biomechanics The typical response was the look of a deer caught in the headlights as they tried to intuit the appropriate answer but had little understanding or insight as to why this would be an important and useful knowledge base for them now or in the future I then posed the question differently Would a book that explained corneal biomechanical principles and testing devices and their application in detecting eyes at risk for developing keratoconus and post LASIK ectasia understanding the biomechanical impact of specific types of keratorefractive surgery and riboflavin UV A corneal collagen cross linking and the impact of corneal biomechanics on the fidelity of intraocular pressure measurement and risk for glaucoma progression be of interest Framed in this context the answer I got was a resounding Yes Therein lies a fundamental disconnect that highlights both the opportunity and need to educate all ophthalmologists about this nascent field This comprehensive book is strengthened by the breadth of contributions from leading experts around the world and provides an important resource for ophthalmologists at all levels of training and experience It gives a panoramic snapshot of our understanding of corneal biomechanics today bridging the gap between theoretical principles testing devices that are commercially available and in development as well as current and potential future clinical applications While there has been a long held appreciation that all types of keratorefractive surgery have an impact and interdependence on corneal biomechanics and wound healing the initial finite element analyses that were applied to understand radial keratotomies were limited by incorrect assumptions that the cornea was a linear elastic homogenous

isotropic material 1 With the advent of excimer laser vision correction critical observations indicated that Munnerlyn's theoretic ablation profiles did not account for either lower or higher order e.g. spherical aberration refractive outcomes 2 suggesting that there were important components missing from the equation e.g. corneal biomechanics and wound healing In a seminal editorial Roberts³ pointed out that the cornea is not a piece of plastic but rather a material with viscoelastic qualities Since that time much has been learned about spatial and depth related patterns of collagen orientation and interweaving as well as the biomechanical response to different keratorefractive surgeries that sever tension bearing lamellae as the cornea responds to and redistributes stress induced by IOP hydration eye rubbing blinking and extraocular muscle forces 3-6 The first reports of post LASIK ectasia⁷ highlighted the need to identify a biomechanical signature of early keratoconus as well as corneas at high risk of developing ectasia irrespective of their current topography or tomography The introduction of two instruments into clinical use the Ocular Response Analyzer (ORA) and the Corneal Visualization Scheimpflug Technology (Corvis ST) that allow measurement of various biomechanical metrics further catapulted the field The availability of these instruments in routine clinical settings allowed the systematic study of the effect of age collagen disorders collagen cross linking corneal rings flaps of various depths contour sidecut angulation pockets and flockets just to name a few Future application of biomechanics to the sclera may improve our understanding of the development and prevention of myopia as well as scleral surgeries and treatments under development for presbyopia It was appreciated by Goldmann and Schmidt that corneal thickness and curvature would influence the measurement of applanation tonometry The recent ability to measure some corneal biomechanical metrics have led to IOP measurement that may be more immune both to their influence and the impact of central corneal thickness (CCT) Certain chapters in this book explain how a thin cornea could be stiffer than a thick one and that stiffness is also impacted by IOP thereby precluding simplistic attempts to adjust IOP measurements using nomograms based upon CCT alone Also highlighted is how corneal hysteresis the ability of the cornea to absorb and dissipate energy during the bidirectional applanation response to a linear Gaussian air puff appears to be an independent risk factor for glaucoma progression and rate of progression 9-10 This comprehensive book starts out with a section devoted to outlining basic biomechanical principles and theories teaching us the language of what Dupps¹¹ has referred to as mechanospeak thus providing a context and common vocabulary to better comprehend the following chapters By first defining basic concepts such as stress strain relationships and creep this theoretical basis is later applied to explain the pathogenesis of corneal diseases e.g. explaining how a focal abnormality in corneal biomechanical properties precipitates a cycle of decompensation and localized thinning and steepening clinically expressed as ectasia progression These early chapters further detail biomechanical differences between in vivo and ex vivo testing between human and animal corneas and sclera and between methods of testing The second section provides a thorough description of two FDA approved devices to measure corneal biomechanics in the clinic i.e. the ORA and the Corvis ST as well as an overview of potential future

technologies including OCT with air puff stimulus ocular pulse elastography and Brilloiun microscopy The third and final section of the book is a thorough treatise on how to interpret the metrics derived from the waveform provided by available clinical devices their adjunct use in ectasia risk screening the comparative biomechanical impact of various keratorefractive surgeries and corneal procedures such as PRK LASIK SMILE and corneal collagen cross linking the impact of corneal biomechanics on IOP measurement and potential biomechanical markers of enhanced susceptibility to glaucoma progression This compendium of our current knowledge of corneal biomechanics its measurement and application provides a strong foundation to more fully understand advances in keratorefractive and corneal surgery diseases and treatments all of which are interdependent on and influence inherent corneal biomechanical properties and behavior Both the robust aspects and limitations of our current understanding are presented including the challenge of creating accurate and predictive finite element models that incorporate the impact of IOP corneal thickness geometry and scleral properties on corneal biomechanics This book provides a key allowing clinical ophthalmologists and researchers to grasp the basics and nuances of this exciting field and to shape it as it evolves in the future

Practical Astigmatism Noel Alpíns,2024-06-01 The surgical correction of astigmatism is the last frontier to optimizing visual outcomes for patients Practical Astigmatism Planning and Analysis is a comprehensive guide to correcting astigmatism from pre operative planning to post operative analysis This provides readers with unique insight to what actually happened surgically did the astigmatism over or under correct Was it on axis or off axis With this book ophthalmologists will be able to analyze previous procedures with the appropriate nomograms and more often achieve targeted outcomes Dr Noel Alpíns has developed the Alpíns Method of astigmatism to provide accurate planning and analysis of astigmatism procedures His method focuses on analyzing refractive and corneal astigmatism parameters and using the results in future surgery to improve visual outcomes The importance of the ocular residual astigmatism ORA is detailed when planning astigmatism surgery Practical Astigmatism features vector planning for refractive laser surgery as well as planning and analysis applied to cataract and limbal relaxing incisions in addition to demonstrating graphical analysis of astigmatism using high quality vector and fan diagrams as used in scientific journals In addition hemidivisional analysis of the irregular cornea corneal coupling in incisional and excimer laser surgery for mixed astigmatism and toric IOL planning with total corneal power using corneal topographic astigmatism CorT total are addressed as well

Some Questions Answered Inside What is the difference between regular and irregular astigmatism How do I diagnose each and how does this affect my surgical technique Can I incorporate corneal astigmatism when performing excimer laser surgery Why are my LRIs undercorrecting the astigmatism Is it safe to perform excimer laser on keratoconous patients Which corneal astigmatism measure do I choose and what do I do following a refractive surprise Practical Astigmatism Planning and Analysis will help ophthalmologists optometrists and technicians alike address each patient s unique circumstances and act as your in depth guide to correcting astigmatism Testimonials For more than three decades I

have been listening to arguing with and admiring the work of Dr Noel Alpíns in the field of astigmatism Despite his remote location on the small island of Australia his knowledge of astigmatism is at the peak of Mt Everest There are few others who have devoted their careers to understanding and managing astigmatism for which the world of ophthalmology is truly grateful Robert H Osher MD Noel is an original thinker who took on and conquered the complexities of astigmatism analysis publishing the seminal papers on the way His work has formed the cornerstone from which our current understanding and management of astigmatism has been built He is someone from whom we have all learnt a great deal and this book is a testament to this Dan Z Reinstein MD MA Cantab FRCSC DABO FRCOphth FEBO **Minimally Invasive Glaucoma**
