Mccollough Effect:

Perceptual Constancy Vincent Walsh, Janusz Kulikowski, 1998-08-13 The world is not always truly reflected in what we see The brain creates images fills in gaps and even at times constructs fictions This book brings together experts from several diverse fields to present state of the art accounts of how the visual world enters two small holes in our heads and is reconstructed to give us the rich impressions of color movement and shape

Perceiving in Depth, Volume 2 Ian P. Howard, Brian J. Rogers, 2012-02-24 Volume 2 addresses stereoscopic vision It starts with the physiology of stereoscopic mechanisms It then deals with binocular rivalry binocular summation and interocular transfer A review of how images are brought into binocular register is followed by a review of stimulus tokens used to detect disparities Cyclopean effects such as cyclopean illusions cyclopean motion texture segregation and binocular direction are reviewed Factors that influence stereoacuity are discussed Two chapters describe how stimuli in distinct depth planes produce contrast effects and affect motion perception and whiteness perception The Pulfrich stereomotion effect and perception of motion in depth are reviewed The volume ends with a review of applications of stereoscopy

The McCollough Effect C. C. D. Shute, 1979-05-31 This work is a study of one of the most extraordinary and mysterious of all visual phenomena that known by the name of its discoverer Celeste McCollough Many such psychophysical effects may be regarded as little more than laboratory curiosities not necessarily of great importance in everyday life The McCollough effect certainly involves phantom colours i e colours generated within the visual system of the brain rather than resulting from the character of the light reaching the eye but nevertheless has properties that make one unwilling to accord it the status of a mere optical illusion Of course even illusions can form valuable objects of study since the perceptual confusions resulting from particular external influences may reveal unsuspected aspects of the sensory processes themselves

Visual Coding and Adaptability C. S. Harris, 2014-02-25 First published in 1980 This book is the first integrated presentation of two of the most active areas in present day visual research Its inspiration and nucleus were provided by two Optical Society of America symposia one on the coding of spatial information in the visual system and the other on adaptability of the visual system Although the two topics might seem at first sight only distantly related they are actually extensively intertwined in contemporary research Some investigators focus on mechanisms of visual analysis but rely on experimental modification of perception to reveal the nature of the coding others focus on perceptual modification but look at analytic elements for indications about what it is that gets modified Likewise most of the chapters in this book combine in varying proportions both themes Adult human perception is the primary concern but illuminating data from animal infant and neurophysiological studies are also discussed

Psychology of Learning and Motivation, 1992-11-26 The objective of the series has always been to provide a forum in which leading contributors to an area can write about significant bodies of research in which they are involved The operating procedure has been to invite contributions from interesting active investigators and then allow them essentially free rein to present their perspectives on

important research problems The result of such invitations over the past two decades has been collections of papers which consist of thoughtful integrations providing an overview of a particular scientific problem The series has an excellent tradition of high quality papers and is widely read by researchers in cognitive and experimental psychology The volume presents research ranging from classical and instrumental conditioning to complex learning and problem solving Topics covered fall within a wide range of disciplines from neuroscience to artificial intelligence

Binocular Vision and Stereopsis Ian P. Howard, Brian J. Rogers, 1995 This book is a survey of knowledge about binocular vision with an emphasis on its role in the perception of a three dimensional world The primary interest is biological vision In each chapter physiological behavioral and computational approaches are reviewed in some detail discussed and interrelated The authors describe experiments required to answer specific questions and relates them to new terminologies and current theoretical schemes

Perception R. Held, H.W. Leibowitz, H.L. Teubner, 2012-12-06 This volume was designed to focus on the problems of perception and originally was to have been solely edited by Professor Hans Lukas Teuber who was a member of the editorial board which initiated production of the Handbook Accordingly he issued invitations to a number of researchers III perception asking them to contribute chapters written in a style described III his words I hope that no author II ill feel COI strained to undertake a major search of the literature he could In it instead on an area in which he has been quite active himself and II here most of the issues are immediately obvious to him In this way the writing of the chapter should be enjoyable rather than a chore it should result in a personal account of the state of a given area rather than in an encyclopedic treatise the field deserves this sort of summary particularly if it is pointed toward the future and speeds the convergence of developments in sensory physiology and psychological studies of perception With the growing burden of national and international commitments including departmental headship Professor Teuber felt that it would be wise to share the editorial responsibilities for this volume and accordingly asked Professors Richard Held and Herschel Leibowitz to co edit the volume with him in the same spirit as outlined in his invitation to authors They agreed to help in this task

Sensory Experience, Adaptation, and Perception Lothar Spillman, Bill R. Wooten, 2013-05-13 Published in 1983 Sensory Experience Adaptation and Perception is a valuable contribution to the field of Cognitive Psychology

Introduction to Color Imaging Science Hsien-Che Lee, 2005-02-24 Colour imaging technology has become almost ubiquitous in modern life in the form of monitors liquid crystal screens colour printers scanners and digital cameras This book is a comprehensive guide to the scientific and engineering principles of colour imaging It covers the physics of light and colour how the eye and physical devices capture colour images how colour is measured and calibrated and how images are processed It stresses physical principles and includes a wealth of real world examples The book will be of value to scientists and engineers in the colour imaging industry and with homework problems can also be used as a text for graduate courses on colour imaging

Neuroscience J. F. Stein, Catherine Stoodley, 2006-08-25 This engaging book will serve as an introductory

text in neuroscience It conveys important ideas in neuroscience without overburdening the student with unnecessary detail Drawing from his 35 years of teaching experience of teaching at Oxford University the author concentrates on concepts and observations that students find difficult amusing interesting or exciting Starting with a brief history of neuroscience it covers cellular and biophysical aspects sensory systems motor systems the hypothalamus the automatic nervous system learning and memory and speech and reading **The Oxford Handbook of Synesthesia** Julia Simner,Edward M.

Hubbard,2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook

The World of the Imagination Eva T. H. Brann,1991 In this book Eva Brann sets out no less a task than to assess the meaning of imagination in its multifarious expressions throughout western history The result is one of those rare achievements that will make *The World of the Imagination* a standard reference **The Uttal Tetralogy of Cognitive**

Neuroscience William R. Uttal,2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes

Encyclopedia of Perception E. Bruce Goldstein,2010 Because of the ease with which we perceive many people see perception as something that just happens However even seemingly simple perceptual experiences involve complex underlying mechanisms which are often hidden from our conscious experience These mechanisms are being investigated by researchers and theorists in fields such as psychology cognitive science neuroscience computer science and philosophy A few examples of the questions posed by these investigations are What do infants perceive How does perception develop What do perceptual disorders reveal about normal functioning How can information from one sense such as hearing be affected by information from another sense such as vision How is the information from all of our senses combined to result in our perception of a coherent environment What are some practical outcomes of basic research in perception These are just a few of the questions this encyclopedia will consider as it presents a comprehensive overview of the field of perception for students researchers and professionals in psychology the cognitive sciences neuroscience and related medical disciplines such as neurology and ophthalmology **Vision** Colin Blakemore,1993-05-13 Professor Colin Blakemore presents a fascinating insight to all the major topics in visual science research **Indian Psychological Review** ,1981

Brainworks Michael S. Sweeney,2011 A companion book to the National Geographic TV series uses brain teasers and optical illusions to shed light on the workings of the human brain **Experimental Phenomena of Consciousness** Talis

Bachmann,Bruno Breitmeyer,Haluk Ogmen,2011-05-26 **Experimental Phenomena of Consciousness** is the definitive collection

of consciousness phenomena in which awareness emerges as an experimental variable With its comprehensive yet succinct entries arranged alphabetically this dictionary will be a valuable reference tool for students libraries and researchers at all levels in psychology neuroscience and philosophy who are investigating consciousness cognition perception and attention It will also be an important addition to the reading lists of courses on consciousness and cognition Most entries include illustrations and a list of references where more thorough treatments of the topic can be found The book is supported by a Web page that provides dynamic illustrations and other supplemental material As the first reference book on the topic Experimental Phenomena of Consciousness will be a valuable tool for undergraduates graduate students professional researchers and anyone who has an interest in the subject of consciousness Studies of Mind and Brain S.T.

Grossberg,2012-12-06 the mass of experimental data from current research in psychology and physiology Grossberg proposes and develops a non linear mathematics as a model for specific functions of mind and brain He finds the classic approach to the mathematical modelling of mind and brain systematically inadequate This inadequacy he holds arises from the attempt to describe adaptive systems in the mathematical language of 9 physics developed to describe stationary i e non adaptive and non evolving systems In place of this linear mathematics Grossberg develops his non linear approach His method is at once imaginative rigorous and philosophically significant it is the thought experiment It is here that the richness of his interdisciplinary mastery and the power of his methods constructions and proofs reveal themselves The method is what C S Peirce characterized as the method of abduction or of hypothetical inference in theory construction given the output of the system as a psychological phenomenon e g *Seeing, second edition* John P. Frisby,James V. Stone,2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr s statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr s three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational

perspective offering a firm conceptual basis for tackling the vast literature on vision. It covers a wide range of topics including aftereffects, the retina, receptive fields, object recognition, brain maps, Bayesian perception, motion, color, and stereopsis. MatLab code is available on the book's website which includes a simple demonstration of image convolution.
