Saturn V Flight Manual, SA 504 George C. Marshall Space Flight Center,1969 Engineering the F-4 Phantom II Glenn E. Bugos,1996 Conceived in 1953 in a chickenwire covered cubicle known as the advanced design cage at McDonnell Aircraft the F 4 Phantom II fighter bomber was produced for 25 years serving a full workload in Vietnam for the Navy Marines and Air Force and surviving through the 1990s in the air arms of eleven nations While most case studies of modern aircraft focus on the many ways the military industrial complex goes wrong this trenchant invigorating study looks deeper at how those who built the complex intended it to work Step by step the reader discovers how the relationships among parts systems procedures economies and missions were shaped by relationships among people scientists engineers testers program managers subcontractors military strategists pilots and corporate leaders Drawing on exhaustive research including

interviews with key players the author makes a major advance in the burgeoning body of literature on technology management by showing how McDonnell worked through the problems of technical integration that plagued defense engineering in the 1960s and 1970s and led to programs full of complexity It is as much a study of how aircraft manufacturers and military officers went about their business as it is a life and times history of an important aircraft The Phantom Story Anthony M.
