These are three typical values obtained by comparing the three estimators in our study.

• Differences between projections and actual observed teletraffic are included in linear theory. Next, different types of forecasting errors are presented, as long as they are not systematic and independent. Correlation is also presented, as well as the effect of correlation on the variance of the forecast.

The last segment of the program adds some comments on Bayesian, one of the widely used methods. This value estimates the best overall value from projections with teletraffic regression and projections with autoregressive projection, as well as the best overall value from regression and Bayesian regression.
